INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 20.101(A) LIMITS THE TOTAL OCCUPATIONAL DOSE RECEIVED PER CALENDAR QUARTER BY INDIVIDUALS IN RESTRICTED AREAS TO 18 3/4 REMS TO THE EXTREMITIES, AND 7 1/2 REMS TO THE SKIN OF THE WHOLE BODY. IN ADDITION, IF CERTAIN SPECIFIED CONDITIONS ARE MET, SECTION 20.101(B) ALLOWS WHOLE BODY EXPOSURES OF 3 REMS PER CALENDAR QUARTER. CONTRARY TO THE ABOVE, DURING THE SECOND CALENDAR QUARTER OF 1980 (APRIL-JUNE), TWO INDIVIDUALS SUSTAINED WHOLE BODY EXPOSURES OF 4.209 REMS AND 4.130 REMS, RESPECTIVELY. ADDITIONALLY, ONE OF THE INDIVIDUALS SUSTAINED EXPOSURE OF THE SKIN TO 8.180 REMS AND THE OTHER SUSTAINED AN EXTREMITY EXPOSURE OF 43.569 REMS.
(8009 INFRACTION)

10CFR 20.202 REQUIRES THAT EACH LICENSEE SUPPLY APPROPRIATE PERSONNEL MONITORING EQUIPMENT AND REQUIRE ITS USE BY EACH INDIVIDUAL WHO ENTERS A RESTRICTED AREA UNDER SUCH CIRCUMSTANCES THAT HE RECEIVES, OR IS LIKELY TO RECEIVE, A DOSE IN ANY CALENDAR QUARTER IN EXCESS OF 25 PERCENT OF THE APPLICABLE VALUE SPECIFIED IN PARAGRAPH (A) OF SECTION 20.101. CONTRARY TO THE ABOVE, ON JUNE 24, 1980 DURING REPAIR OF INCORE FLUX DETECTOR DRIVE COMPONENTS, TWO INDIVIDUALS RECEIVED RADIATION DOSES TO THE EXTREMITIES IN EXCESS OF 25 PERCENT OF THE VALUE SPECIFIED IN 10 CFR 20.201(A) AND APPROPRIATE EXTRIMITY MONITORING EQUIPMENT WAS NOT SUPPLIED.
(8009 INFRACTION)

10 CFR 50.72 REQUIRES THAT EACH LICENSEE NOTIFY THE NRC OPERATIONS CENTER AS SOON AS POSSIBLE AND IN ALL CASES WITHIN ONE HOUR OF THE OCCURRENCE OF ANY EVENT MEETING THE CRITERIA OF 10 CFR 20.403. 10 CFR 20.403 REQUIRES EACH LICENSEE TO NOTIFY THE NRC OF ANY INCIDENT INVOLVING LICENSED MATERIAL WHICH MAY HAVE CAUSED OR THREATENS TO CAUSE EXPOSURE OF THE WHOLE BODY OF ANY INDIVIDUAL TO 5 REMS OR MORE OF RADIATION. CONTRARY TO THE ABOVE, ON JUNE 24, 1980, DURING AN INCIDENT INVOLVING WORK ON INCORE FLUX DETECTOR COMPONENTS, THREE INDIVIDUALS WERE EXPOSED TO RADIATION WHICH MAY HAVE CAUSED WHOLE BODY EXPOSURES IN EXCESS OF 5 REMS AND THE NRC OPERATIONS CENTER WAS NOT NOTIFIED.
(8009 INFRACTION)

TECHNICAL SPECIFICATION 6.8 REQUIRES THAT WRITTEN PROCEDURES BE ESTABLISHED, IMPLEMENTED AND MAINTAINED COVERING THE ACTIVITIES RECOMMENDED IN APPENDIX A OF REGULATORY GUIDE 1.33, NOVEMBER 1972. THIS REGULATORY GUIDE REQUIRES THAT PROCEDURES FOR REPAIR OR REPLACEMENT OF EQUIPMENT BE PREPARED PRIOR TO BEGINNING WORK. CONTRARY TO THE ABOVE, AS OF JUNE 24, 1980, REPAIR OF THE INCORE FLUX MONITORING SYSTEM AND REPLACEMENT OF NEUTRON DETECTORS HAD BEEN CONDUCTED WITHOUT PREPARATION AND USE OF THE REQUIRED PROCEDURES.
(8009 INFRACTION)

TECHNICAL SPECIFICATION 6.11 REQUIRES THAT PROCEDURES FOR PERSONNEL RADIATION PROTECTION SHALL BE PREPARED CONSISTENT WITH THE REQUIREMENTS OF 10 CFR 20 AND SHALL BE FOLLOWED IN ALL OPERATIONS INVOLVING PERSONNEL RADIATION EXPOSURE. RADIOLOGICAL AND ENVIRONMENTAL SERVICES PROCEDURE NO. RE-HP-P204, "CONTAINMENT ENTRY," REQUIRES IN SECTION 7 THAT A "CONDITION AT TIME OF CONTAINMENT ENTRY FORM" BE COMPLETED PRIOR TO CONTAINMENT ENTRY. CONTRARY TO THE ABOVE, THE "FRACTIONAL PART OF MPC IN CONTAINMENT" AND "AREAS TO BE SURVEYED" SECTIONS OF THE ENTRY FORM WERE NOT COMPLETED FOR A CONTAINMENT ENTRY MADE BY PERSONNEL TO REPAIR AN INCORE FLUX DETECTOR DRIVE ON JUNE 24, 1980.
(8009 DEFICIENCY)

RADIOLOGICAL AND ENVIRONMENTAL SERVICES PROCEDURE NO. RE-HPP-4.1, "ISSUANCE AND CONTROL OF PERSONNEL DOSIMETRY," REQUIRES IN SECTION 7.1.5.2 THAT EXTREMITY DOSIMETRY SHOULD BE ISSUED WHEN IT IS LIKELY THAT THE EXTREMITY DOSE WILL EXCEED 5 TIMES THE WHOLE BODY EXPOSURE AND BE GREATER THAN 500 MREM/HR TO THE EXTREMITY. THIS PROCEDURE FOR PERSONNEL RADIATION PROTECTION IS NOT CONSISTENT WITH THE REQUIREMENTS OF 10 CFR 20.202, "PERSONNEL MONITORING," IN THAT IT DOES NOT PROVIDE ADEQUATE GUIDANCE FOR EXTREMITY MONITORING IF PERSONNEL EXPOSURES IN ANY CALENDAR QUARTER ARE LIKELY TO EXCEED 25 PERCENT OF THE APPLICABLE VALUE SPECIFIED IN PARAGRAPH (A) OF SECTION 20.101.
(8009 DEFICIENCY)

PLANT STATUS

Operating routinely.

LAST IE SITE INSPECTION DATE: June 1-30, 1980

INSPECTION REPORT NO: 80-14

SUMMARY

INSPECTION SUMMARY

Inspection on June 9-20, (80-11): Special, announced inspection of radiation protection program, including organization and management, training, quality assurance, procedures, internal and external exposure controls, surveys and access controls, instrumentations, ALARA, radioactive waste, facilities and equipment, and accident response capabilities. The inspection involved 500 inspector-hours onsite by five NRC inspectors. Several significant weaknesses in the radiation protection program were identified. These weaknesses are in the areas of staffing, offshift radiation protection capabilities, contract radiation protection technician qualifications, management support, ALARA program, training, access control, and radiation and contamination area surveillance and posting. Two apparent items of noncompliance were found (inadequate high radiation area access controls; and inadequate posting of radiation areas).

Inspection during June, (80-14): Routine inspection of control room operations, review of logs; selected emergency systems; followup of licensee event reports, IE Bulletins and IE Circulars; organization and administration; onsite review committee; transportation of irradiated fuel by truck. The inspection involved 62 inspector-hours onsite by two NRC inspectors including 30 inspector-hours onsite during off-shifts. No items of noncompliance or deviations were identified in these areas.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 6.4.1.C, THE STATION SHALL BE OPERATED AND MAINTAINED IN ACCORDANCE WITH APPROVED PROCEDURES. WRITTEN PROCEDURES WITH APPROPRIATE CHECK-OFF LISTS AND INSTRUCTIONS SHALL BE PROVIDED FOR ACTIONS TAKEN TO CORRECT SPECIFIC AND FORESEEN POTENTIAL MALFUNCTIONS OF SYSTEMS OR COMPONENTS INVOLVING NUCLEAR SAFETY AND RADIATION LEVELS. INCLUDING RESPONSES TO ALARMS. SUSPECTED PRIMARY SYSTEM LEAKS AND ABNORMAL REACTIVITY CHANGES. CONTRARY TO THE ABOVE. ADEQUATE PROCEDURES DID NOT EXIST TO GUIDE THE OPERATOR PROPERLY DURING THE LOSS OF MOST CONTROL BOARD INDICATIONS, WHICH OCCURRED ON NOVEMBER 10, 1979, AS A RESULT OF LOSS OF THE KI INVERTER POWER SUPPLY FOR THE INTEGRATED CONTROL SYSTEM AND MOST CONTROL BOARD INDICATIONS. PROCEDURES WERE ALSO INADEQUATE TO GUIDE THE OPERATOR DURING RECOVERY FROM THIS EVENT IN THAT MAXIMUM ALLOWABLE REACTOR COOLANT SYSTEM COOLDOWN RATES WERE EXCEEDED.
(7937 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 3.1.2.1. OCONEE UNIT 3 REACTOR COOLANT SYSTEM COOLDOWN RATES SHALL BE LIMITED IN ACCORDANCE WITH FIGURE 3.1.2-2.C. THIS FIGURE SPECIFIES THAT. THE MAXIMUM COOLDOWN RATE BETWEEN 532 DEGREES F AND 432 DEGREES F WILL BE LESS THAN OR EQUAL TO 100 DEGREES F PER HOUR. CONTRARY TO THE ABOVE, DURING RECOVERY FROM THE TRANSIENT EVENT ON NOVEMBER 10, 1979, THE UNIT 3 REACTOR COOLANT SYSTEM WAS COOLED DOWN APPROXIMATELY 140 DEGREES F. WITHIN THIRTY MINUTES. FROM AN INDICATED 560 DEGREES F TO AN INDICATED 420 DEGREES F.
(7937 INFRACTION)

ITEM 6 OF IE BULLETIN 79-05B. DATED APRIL 21, 1979, REQUIRED THAT YOU REVIEW YOUR PROMPT REPORTING PROCEDURES FOR NRC NOTIFICATION TO ASSURE THAT NRC IS NOTIFIED WITHIN ONE HOUR OF THE TIME THE REACTOR IS NOT IN A CONTROLLED OR EXPECTED CONDITION OF OPERATION. FURTHER, AT THAT TIME AN OPEN CONTINUOUS COMMUNICATION CHANNEL SHALL BE ESTABLISHED AND MAINTAINED WITH NRC. CONTRARY TO THE ABOVE, AT 3:15 P.M., ON NOVEMBER 10, 1979, OCONEE UNIT 3 EXPERIENCED A TRANSIENT DURING WHICH THE LOSS OF THE KI INVERTER RESULTED IN THE UNIT BEING IN AN UNEXPECTED CONDITION OF OPERATION, AND THE NRC WAS NOT NOTIFIED UNTIL APPROXIMATELY 8:30 P.M. ON THE SAME DATE.

ENFORCEMENT STATUS

10 CFR 20.103, "EXPOSURE OF INDIVIDUALS TO CONCENTRATIONS OF RADIOACTIVE MATERIALS IN AIR IN RESTRICTED AREAS" STATES IN PARAGRAPH (B) (IN PART), "THE LICENSEE SHALL, AS A PRECAUTIONARY PROCEDURE, USE PROCESS OR OTHER ENGINEERING CONTROLS, TO THE EXTENT PRACTICABLE, TO LIMIT CONCENTRATIONS OF RADIOACTIVE MATERIALS IN AIR TO LEVELS BELOW THOSE WHICH DELIMIT AN AIRBORNE RADIOACTIVITY AREA AS DEFINED IN 20.203(D)(1)(II)... WHEN IT IS IMPRACTICABLE TO APPLY PROCESS OR OTHER ENGINEERING CONTROLS...OTHER PRECAUTIONARY PROCEDURES, SUCH AS INCREASED SURVEILLANCE, LIMITATION OF WORKING TIMES OR THE PROVISION OF RESPIRATORY PROTECTIVE EQUIPMENT, SHALL BE USED TO MAINTAIN INTAKE OF RADIOACTIVE MATERIALBY ANY INDIVIDUAL WITHIN ANY PERIOD OF SEVEN CONSECUTIVE DAYS AS FAR BELOW THAT INTAKE WHICH WOULD RESULT FROM INHALATION OF SUCH MATERIAL FOR 40 HOURS AT THE UNIFORM CONCENTRATIONS SPECIFIED IN APPENDIX B, TABLE 1, COLUMN 1." CONTRARY TO THE ABOVE, NO PROCESS OR ENGINEERING CONTROLS, TO THE EXTENT PRACTICABLE OR OTHER PRECAUTIONARY PROCEDURES WERE USED BY THE LICENSEE DURING CLEANING AND EXAMINATION OF CONTROL ROD BLADE HANDLING TOOLS ON MARCH 2, 1980 TO LIMIT CONCENTRATIONS OF RADIOACTIVE MATERIALS IN AIR AND INTAKE OF RADIOACTIVE MATERIAL BY TWO INDIVIDUALS PERFORMING THE ABOVE EVALUATIONS. THE INDIVIDUALS INVOLVED IN THE ABOVE SUSTAINED EXTENSIVE RADIOACTIVE SKIN CONTAMINATION AND INTAKES OF RADIOACTIVE MATERIAL IN EXCESS OF THE 7 DAY INTAKE LIMIT.
(8511 INFRACTION)

10 CFR 20.103(A)(3) STATES IN PART, "FOR PURPOSES OF DETERMINING COMPLIANCE WITH THE REQUIREMENTS OF THIS SECTION, THE LICENSEE SHALL USE SUITABLE MEASUREMENTS OF CONCENTRATIONS OF RADIOACTIVE MATERIALS IN AIR, FOR DETECTING AND EVALUATING AIRBORNE RADIOACTIVITY IN RESTRICTED AREAS...." CONTRARY TO THE ABOVE, ON MARCH 2, 1980, AT 10:00 AM AND 8:20 PM RESPECTIVELY, TWO CONTROL ROD BLADE HANDLING TOOLS WERE REMOVED FROM THE FACILITIES SPENT FUEL STORAGE POOL, HANDLED, EXAMINED, AND FOR AT LEAST ONE TOOL, REPAIRED BY PERSONNEL WITHOUT SUITABLE MEASUREMENTS OF AIRBORNE RADIOACTIVITY BEING MADE. THE TOOLS EXHIBITED RADIOACTIVE CONTAMINATION OF 345,300 DPM BETA-GAMMA AND 47 DPM ALPHA PER 100 CENTIMETERS SQUARED AND 850 MILLIRAD PER HOUR BETA AND 190 DPM ALPHA PER 100 CENTIMETERS SQUARED RESPECTIVELY.

TECHNICAL SPECIFICATION 6.8, PROCEDURES REQUIRES IN SECTION 6.8.1, THAT WRITTEN PROCEDURES BE ESTABLISHED, IMPLEMENTED, AND MAINTAINED THAT MEET OR EXCEED THE REQUIREMENTS OF SECTION 5.1 AND 5.3 OF AMERICAN NATIONAL STANDARD N18.7-1972 AND APPENDIX "A" OF REGULATORY GUIDE 1.33-1972. APPENDIX "A" OF GUIDE 1.33 LISTS, IN SECTION G.5.E, RADIOACTIVE WORK PERMIT PROCEDURE AS A PROCEDURE TO BE PREPARED.(ANSI) N18.7 PRESENTS IN SECTION 5.3.2 THE CONTENT TO BE INCLUDED IN A PROCEDURE. INCLUDED IN 5.3.2 ARE PRECAUTIONS, LIMITATIONS AND ACTIONS. CONTRARY TO THE ABOVE, FROM JULY 2, 1979 TO MARCH 18, 1980, NO RWP PROCEDURE WAS ESTABLISHED, IMPLEMENTED OR MAINTAINED MEETING THE ABOVE REQUIREMENTS IN THAT THE PROCEDURE ESTABLISHED BY THE LICENSEE AS A PROCEDURE DID NOT CONTAIN PRECAUTIONS OR LIMITATIONS AND ACTIONS. THE RWP PROCEDURE DID NOT CONTAIN: (1) PRECAUTIONS, LIMITATIONS OR ACTIONS TO BE TAKEN BY PERSONNEL, INCLUDING RADIATION PROTECTION TECHNICIAN ACTIONS, SUCH AS TERMINATION DUE TO CHANGING RADIATION CONDITIONS, ACTIONS TO BE TAKEN AS A RESULT OF A WORKER'S FAILURE TO ADHERE TO THE REQUIREMENTS; (2) CRITERIA TO DEFINE THE CONDITIONS FOR USE OF EXTENDED VERSUS ROUTINE RWP; (3) LIMITATIONS REGARDING THE USE OF ONE RWP TO COVER MULTIPLE WORK ACTIVITIES; (4) REQUIRED ACTION (BASED ON RADIOLOGICAL HAZARDS PRESENT) SUCH AS HOLDING A PREPLANNING MEETING PRIOR TO COMMENCEMENT OF THE WORK. THE PREPLANNING MEETINGS WOULD SERVE TO INSTRUCT WORKERS IN THE PRECAUTIONS AND PROCEDURES TO MINIMIZE EXPOSURE; AND, (5) CONDUCT OF AN AS LOW AS REASONABLY ACHIEVABLE (ALARA) REVIEW PRIOR TO COMMENCEMENT OF WORK.
(8511 VIOLATION)

TECHNICAL SPECIFICATION 6.11, "RADIATION PROTECTION PROGRAM," STATES, "PROCEDURES FOR PERSONNEL RADIATION PROTECTION SHALL BE PREPARED CONSISTENT WITH THE REQUIREMENTS OF 10 CFR 20 AND SHALL BE APPROVED, MAINTAINED AND ADHERED TO FOR ALL OPERATIONS INVOLVING PERSONNEL RADIATION EXPOSURE." RADIATION PROTECTION PROCEDURE NO. 915.7, REVISION 5, "PERSONNEL MONITORING," DEVELOPED PURSUANT TO THE ABOVE, REQUIRES IN PARAGRAPH 5.6 THAT EXTREMITY DOSIMETRY SHALL BE ISSUED WHEN THE ESTIMATED EXTREMITY DOSE IS EXPECTED TO EXCEED FOUR (4) TIMES THE ESTIMATED WHOLE BODY DOSE. ADDITIONALLY, 10 CFR 20.202(A) REQUIRES PERSONNEL MONITORING EQUIPMENT BE SUPPLIED BY THE LICENSEE AND USED BY EACH INDIVIDUAL WHO IS LIKELY TO RECEIVE 25 PERCENT OF THE APPLICABLE VALUE SPECIFIED IN 10 CFR 20.101(A). CONTRARY TO THE ABOVE, ON MARCH 2, 1980, PERSONNEL PERFORMED WORK ON A CONTROL ROD BLADE HANDLING TOOL, WHICH EXHIBITED EXTREMITY DOSES APPROXIMATELY 40 TIMES THE WHOLE BODY DOSE AND PERSONNEL WERE LIKELY TO RECEIVE 25 PERCENT OF THE APPROPRIATE LIMIT SPECIFIED IN 20.101(A) AND EXTREMITY DOSIMETRY WAS NOT ISSUED TO PERSONNEL PERFORMING WORK ON THE TOOL.

ENFORCEMENT STATUS

10 CFR 19.12, "INSTRUCTIONS TO WORKERS," STATES, "ALL INDIVIDUALS WORKING IN OR FREQUENTING ANY PORTION OF A RESTRICTED AREA SHALL BE KEPT INFORMED OF THE STORAGE, TRANSFER OR USE OF RADIOACTIVE MATERIALS OR OF RADIATION IN SUCH PORTIONS OF THE RESTRICTED AREA, SHALL BE INSTRUCTED IN THE HEALTH PROTECTION PROBLEMS ASSOCIATED WITH EXPOSURE TO SUCH RADIOACTIVE OR RADIATION, IN PRECAUTIONS OR PROCEDURES TO MINIMIZE EXPOSURE AND IN THE PURPOSE AND FUNCTIONS OF PROTECTIVE DEVICES EMPLOYED." THE EXTENT OF THESE INSTRUCTIONS SHALL BE COMMENSURATE WITH POTENTIAL RADIOLOGICAL HEALTH PROTECTION PROBLEMS IN THE RESTRICTED AREA. CONTRARY TO THE ABOVE, ON MARCH 2, 1980, TWO WORKERS, PERFORMING HANDLING, CLEANING, EXAMINATION AND REPAIR OF HIGHLY CONTAMINATED CONTROL ROD BLADE HANDLING TOOLS WERE NOT GIVEN INSTRUCTIONS COMMENSURATE WITH THE POTENTIAL RADIOLOGICAL HEALTH PROTECTION PROBLEMS ASSOCIATED WITH HANDLING THE TOOLS INCLUDING BUT NOT LIMITED TO PREPLANNING MEETINGS TO DISCUSS RADIOLOGICAL PRECAUTIONS AND PROCEDURES FOR HANDLING THE CONTAMINATED TOOLS. CONSEQUENTLY, THE WORKERS RECEIVED PERSONNEL SKIN CONTAMINATION UP TO 20,000 DPM OVER PORTIONS OF THEIR BODY AND INTAKES OF RADIOACTIVE MATERIAL UP TO 1,600 NANOCURIES OB COBALT-60 FOR THE ONE WORKER AND 500 NANOCURIES COBALT-60 FOR THE OTHER WORKER. THIS REPRESENTS A MAXIMUM INTAKE OF 22% OF THE ALLOWABLE QUARTERLY QUANTITY LIMIT AS SPECIFIED IN 10 CPR 20 FOR COBALT-60.

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENTS

A reactor trip from significant power level was manually initiated on July 2 when severe oil leakage developed on the turbine seal oil system. A reactor trip in the startup range was experienced on July 9 due to an erroneous high startup rate signal from a defective wide-range nuclear instrument channel. (80-13)

MANAGERIAL ITEMS

Effective August 1, 1980, Robert W. Montross assumed duties as Plant General Manager - Palisades. He replaces James G. Lewis, who transferred to the licensee's corporate Nuclear Operations staff effective the same date. (80-13)

SUMMARY

INSPECTION SUMMARY

Inspection on July 22-24, (80-11): Routine, unannounced inspection of core thermal power evaluation; power coefficient of reactivity measurement; control rod worth measurements; quadrant power tilt measurements; and zero power ARO (all rods out) and critical boron concentration. The inspection involved 36 inspector-hours onsite by three NRC inspectors. No items of noncompliance or deviations were identified.

Inspection during July, (80-13): Routine, monthly resident inspection program activities including operational safety; maintenance; surveillance; reportable events; plant trips; organization and administration; review and audit; unresolved items; and action on NRC correspondence. The inspection involved 240 inspector-hours onsite by two NRC inspectors, including 44 inspector-hours onsite during off-shifts. Of the nine areas inspected, no items of noncompliance or deviations were identified in eight areas. One item of noncompliance (failure to adhere to administrative procedures for equipment control) was identified in the remaining area.

INSPECTION REPORT NO: 80-13

SUMMARY

INSPECTION SUMMARY

Inspection on June 4-27 and July 8, (80-10): Routine, unannounced inspection conducted by resident inspectors during the period June 4-27 and July 8, 1980, of operational safety verification, licensee event report followup, IE Bulletin followup, and IE Circular followup. The inspection involved 180 inspector-hours onsite by two NRC inspectors. An Enforcement Conference was held on July 8, 1980, to discuss the recent increase in personnel errors. The meeting involved 12 manhours by 4 NRC representatives. Of the four areas inspected, no items of noncompliance were identified in two areas. One item of noncompliance was identified in one area (uncontrolled vital area access).

Inspection on June 30 through July 30, (80-12): Licensee event followup; IE Bulletin followup; IE Circular followup; operational safety verification; administrative controls on containment purging; training staff qualification; review of periodic and special reports; monthly maintenance observation; monthly surveillance observation. The inspection involved 195 inspector-hours onsite by four NRC inspectors including 8 inspector-hours onsite during off-shifts. Of the nine areas inspected, one item of noncompliance was identified in one area (improper controlled area access and improper control of radioactive material).

Inspection on July 17 and 22, (80-13): Confirmatory Measurements including telephone discussion and closeout of results of a previous sample collection and the submission of spiked samples. No items of noncompliance or deviations were identified.

TECHNICAL SPECIFICATION 15.3.3.A.1.D REQUIRES TWO RHR PUMPS TO BE OPERABLE FOR NORMAL REACTOR OPERATION. TS 15.3.3.A.2.B PERMITS ONE RHR PUMP TO BE OUT OF SERVICE DURING REACTOR OPERATION UNDER CERTAIN SPECIFIED CONDITIONS. CONTRARY TO THE ABOVE, ON JUNE 19, 1980, WHILE THE 3D EMERGENCY DIESEL GENERATOR WAS OUT OF SERVICE FOR ANNUAL MAINTENANCE (RENDERING THE A SAFEGUARDS TRAIN, INCLUDING RHR PUMP 2P10A, INOPERABLE DURING A LOSS OF AC POWER EVENT) THE SUCTION VALVE FOR RHR PUMP 2P10B WAS CYCLED FROM FULL OPEN TO FULL CLOSED AND BACK TO FULL OPEN. FOR APPROXIMATELY 90 SECONDS, WHILE THE SUCTION VALVE WAS BEING CYCLED, BOTH RHR PUMPS WOULD HAVE BEEN INOPERABLE HAD A LOSS OF AC POWER EVENT OCCURRED.
(8010 INFRACTION)

TECHNICAL SPECIFICATION 15.3.7, ITEM B.1, PARAGRAPH D, STATES: "EITHER BUS A03 OR A04 MAY BE OUT OF SERVICE FOR A PERIOD NOT EXCEEDING 7 DAYS PROVIDED BOTH DIESEL GENERATORS ARE OPERABLE AND THE ASSOCIATED DIESEL GENERATOR IS OPERATING AND PROVIDING POWER TO THE ENGINEERED SAFEGUARD BUS NORMALLY SUPPLIED BY THE OUT OF SERVICE BUS." THE BASIS TO THE TECHNICAL SPECIFICATION STATES IN PART: "SEPARATION IS MAINTAINED IN THE 4160-VOLT SYSTEM TO ALLOW THE PLANT AUXILIARY EQUIPMENT TO BE ARRANGED ELECTRICALLY SO THAT REDUNDANT ITEMS RECEIVE THEIR POWER FROM THE TWO DIFFERENT BUSES. FOR EXAMPLE, THE SAFETY INJECTION PUMPS ARE SUPPLIED FROM THE 4160 VOLT BUSES 1-A05 AND 1-A06 FOR UNIT NO. 1 AND 2-A05 AND 2-A06 FOR UNIT NO. 2..." GENERAL DESIGN CRITERION 17 STATES IN PART: "THE ONSITE ELECTRIC POWER SUPPLIES...SHALL HAVE SUFFICIENT INDEPENDENCE, REDUNDANCY, AND TESTABILITY TO PERFORM THEIR SAFETY FUNCTIONS ASSUMING A SINGLE FAILURE." (ALSO ASSUMING A LOSS OF OFFSITE POWER). CONTRARY TO THE ABOVE, ENGINEERED SAFEGUARDS BUSES 2-A05 AND 2-A06 WERE ELECTRICALLY CONNECTED AND BOTH WERE SUPPLIED BY 4160 VOLT BUS A-04. THIS CONDITION WAS IDENTIFIED ON JUNE 9, 1980, BY THE LICENSEE AND IS BELIEVED TO HAVE EXISTED SINCE MAY 2, 1980 FOLLOWING A LOSS OF AC POWER TEST.

SUMMARY

INSPECTION SUMMARY

Inspection on June 4-27 and July 8, (80-10): Routine, unannounced inspection conducted by resident inspectors during the period June 4-27 and July 8, 1980, of operational safety verification, licensee event report followup, IE Bulletin followup, and IE Circular followup. The inspection involved 180 inspector-hours onsite by two NRC inspectors. An Enforcement Conference was held on July 8, 1980, to discuss the recent increase in personnel errors. The meeting involved 12 manhours by 4 NRC representatives. Of the four areas inspected, no items of noncompliance were identified in two areas. Two items of noncompliance were identified in one area (RHR pumps operability impaired; ESF buses cross-connected). One item of noncompliance was identified in one area (uncontrolled vital area access).

Inspection on June 30 through July 30, (80-12): Licensee event followup; IE Bulletin followup; IE Circular followup; operational safety verification; administrative controls on containment purging; training staff qualification; review of periodic and special reports; monthly maintenance observation; monthly surveillance observation. The inspection involved 195 inspector-hours onsite by four NRC inspectors including 8 inspector-hours onsite during off-shifts. Of the nine areas inspected, one item of noncompliance was identified in one area (improper controlled area access and improper control of radioactive material).

Inspection on July 17 and 22, (80-13): Confirmatory Measurements including telephone discussion and closeout of results of a previous sample collection and the submission of spiked samples. No items of noncompliance or deviations were identified.

LAST IE SITE INSPECTION DATE: July 14-18, 1980

INSPECTION REPORT NO: 80-18

SUMMARY

INSPECTION SUMMARY

Inspection on June 6 through July 18, (80-12): Routine, unannounced inspection consisting of operational safety verification, maintenance observation, licensee event report followup, IE Bulletin followup, plant trips, procedure verification, followup on Headquarters requests and independent inspection. The inspection involved 180 inspector-hours onsite by two NRC inspectors including 40 inspector-hours onsite during offshifts. No items of noncompliance were identified.

Inspection on May 28, (80-17): During the inspection of radioactive waste at Richland, Washington from May 27 to May 30, 1980, trailer 544142 was inspected. A representative of the State of Washington also examined the shipment. One apparent item of noncompliance with DOT regulations was identified (failure to meet strong, tight package requirement). It appears that the Department of Transportation and the NRC Region III Office are the appropriate organizations to take enforcement actions.

Inspection on July 14-18, (80-18): Included a review of the Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization, and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys, and Combinations; Records and Reports; Licensee Action on Previous Inspection Findings; and Independent Inspection Effort. The inspection involved 127.5 inspector-hours onsite by three NRC inspectors. The inspection began during the day shift; 24 inspector-hours were accomplished during offshift periods. The licensee was found to be in compliance with NRC requirements within the areas examined during the inspection, except for the following four items: Compensatory Measures - The licensee failed to establish and properly implement procedures to compensate for the failure of specific security related equipment; Access Control (Vital Areas) - The licensee failed to control access to a vital area; Access Control (Physical Barriers) - The licensee failed to check two vital area doors; and Locks, Keys, and Combinations - The licensee failed to adequately control blank key cards.

LAST IE SITE INSPECTION DATE: July 14-18, 1980

INSPECTION REPORT NO: 80-20

SUMMARY

INSPECTION SUMMARY

Inspection on June 6 through July 18, (80-15): Routine, unannounced inspection consisting of operational safety verification, maintenance observation, licensee event report followup, IE Bulletin followup, plant trips, procedure verification, followup on Headquarters requests and independent inspection. The inspection involved 180 inspector-hours onsite by two NRC inspectors including 40 inspector-hours onsite during offshifts. No items of noncompliance were identified.

Inspection on May 23, (80-19): During the inspection of radioactive waste at Richland, Washington from May 27 to May 30, 1980, trailer 544142 was inspected. A representative of the State of Washington also examined the shipment. One apparent item of noncompliance with DOT regulations was identified (failure to meet strong, tight package requirement). It appears that the Department of Transportation and the NRC Region III Office are the appropriate organizations to take enforcement actions.

Inspection on July 14-18, (80-20): Included a review of the Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization, and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys, and Combinations; Records and Reports; Licensee Action on Previous Inspection Findings; and Independent Inspection Effort. The inspection involved 127.5 inspector-hours onsite by three NRC inspectors. The inspection began during the day shift; 24 inspector-hours were accomplished during offshift periods. The licensee was found to be in compliance with NRC requirements within the areas examined during the inspection, except for the following four items: Compensatory Measures - The licensee failed to establish and properly implement procedures to compensate for the failure of specific security related equipment; Access Control (Vital Areas) - The licensee failed to control access to a vital area; Access Control (Physical Barriers) - The licensee failed to check two vital area doors; and Locks, Keys, and Combinations - The licensee failed to adequately control blank key cards.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 20.201, AT THE TIME OF THE INVESTIGATION (AND ALTHOUGH THE LICENSEE WAS DOCUMENTING THE RELEASES) THE LICENSEE HAD NOT PERFORMED AN EVALUATION OF THE PERIODIC PRESENCE OF TRITIUM, CESIUM-134, CESIUM-137, COBALT-58, COBALT-60 AND IODINE-131 IN WATER ENTERING A TURBINE BUILDING FLOOR DRAIN AND BEING RELEASED TO THE UNRESTRICTED AREA.
(7990 INFRACTION)

CONTRARY TO TS-3.11.A.5, LIQUID WASTE RELEASES (NOS. 79-915 AND 79-916) WERE MADE FROM THE CONTAMINATED DRAIN TANKS ON APRIL 3, 1979, DURING A PERIOD THAT THE LIQUID WASTE DISPOSAL RADIATION MONITOR, RM-LW-108 WAS NOT FUNCTIONING PROPERLY AS INDICATED BY RADIATION RECORDER RR-175. MANY LIQUID WASTE RELEASES WERE MADE FROM THE CONTAMINATED DRAIN TANKS AND THE LIQUID WASTE TEST TANK DURING PERIODS WHEN MAINTENANCE RECORDS (MRS) INDICATED THE DISCHARGE TUNNEL RADIATION MONITOR RM-SW-120 SHOULD HAVE BEEN DECLARED INOPERATIVE. FOR EXAMPLE, MR S1907170621 WHICH WAS INITIATED AT 0621 HOURS ON JULY 17, 1979, DESCRIBED THE PROBLEM AS "MONITOR SPIKES". THE MR INDICATED THAT THE PHOTOMULTIPLIER TUBE IN THE DETECTOR WAS REPLACED AND THE MONITOR WAS RECALIBRATED ON JULY 18, 1979. YET RECORDS INDICATE THAT 10 LIQUID WASTE RELEASES WERE MADE BETWEEN INITIATION OF THE MR AND 2400 HOURS ON JULY 17, 1979. NINE LIQUID WASTE RELEASES WERE MADE DURING THE PERIOD 0600 HOURS TO 2330 HOURS ON FEBRUARY 25, 1979, WHEN DISTANCES BETWEEN TIME MARKS ON THE RADIATION RECORDER RR-175 CHARTS, AS MEASURED BY NRC INVESTIGATORS, INDICATE THAT THE RECORDER WAS WITHOUT CHART PAPER OR WAS TURNED OFF FOR APPROXIMATELY 161 HOURS DURING THAT PERIOD.
(7990 INFRACTION)

CONTRARY TO TS 3.11.A.4, REPRESENTATIVE SAMPLES WERE NOT TAKEN BEFORE RELEASES FROM THE CONTAMINATED DRAIN TANKS ON VARIOUS UNKNOWN DATES IN THAT VARIOUS LICENSEE OPERATORS ADMITTED HAVING: (1) TAKEN SAMPLES WITHOUT HAVING RECIRCULATED THE CONTENTS OF THE TANKS TO ENSURE THOROUGH MIXING; AND (2) TAKEN A SINGLE SAMPLE FROM BOTH TANKS SIMULTANEOUSLY WITHOUT KNOWING THE RELATIVE CONTRIBUTION OF THE INDIVIDUAL TANKS TO THE COMPOSITE SAMPLE.
(7990 INFRACTION)

CONTRARY TO TS 6.4, OPERATING PROCEDURE OP-22.5, "CONTAMINATED DRAINS SYSTEM" AND/OR ANNUNICATOR PROCEDURES 1WD-9 AND 1WD-11, "CONTAMINATED DRAIN TANK HI-LO LEVEL" WERE NOT FOLLOWED ON AT LEAST SIX OCCASIONS DURING 1979 (RELEASE NOS. 79-01, 79-06, 79-545, 79-547, 79-571 AND 79-574) IN THAT THE LIQUID WASTE FLOW RECORDER CHARTS INDICATE THAT THE VOLUMES DISCHARGED WERE BETWEEN 1800 AND 2500 GALLONS, WHILE THE MAXIMUM WHICH COULD BE RELEASED FOLLOWING THE PROCEDURES WOULD BE 1116 GALLONS SIMULTANEOUS RELEASE OF BOTH CONTAMINATED DRAIN TANKS. PREVENTIVE MAINTENANCE PROCEDURES HAVE NOT BEEN FOLLOWED IN THAT PREVENTIVE MAINTENANCE ON VARIOUS PIECES OF EQUIPMENT HAD NOT BEEN PERFORMED AT THE FREQUENCY ESTABLISHED BY THE PROCEDURES AND WAS OVERDUE AT THE TIME OF THE INVESTIGATION. EXAMPLES INCLUDE COMPONENT COOLING WATER PUMPS WHICH ARE REQUIRED BY PROCEDURE MMP-P-CC-002 TO RECEIVE PREVENTIVE MAINTENANCE ON AN ANNUAL BASIS. AS OF MAY 8, 1980 THREE OF THE FOUR PUMPS (B, C AND D) WERE OVERDUE BY AT LEAST SIX MONTHS. VARIOUS OPERATIONS FOR WHICH WRITTEN PROCEDURES HAVING INDIVIDUAL PROCEDURAL STEP SIGN-OFF IN ACCORDANCE WITH SECTION 5 OF THE VEPCO NUCLEAR POWER STATION QUALITY ASSURANCE MANUAL AND SURRY ADMINISTRATIVE PROCEDURE NO. 29, WERE PERFORMED WITHOUT THE APPROPRIATE PROCEDURE BEING SIGNED OFF AS THE INDIVIDUAL STEPS WERE ACCOMPLISHED. A SPECIFIC EXAMPLE INCLUDES THE RELEASES OF LIQUIDS FROM THE CONTAMINATED DRAIN TANKS.
(7990 INFRACTION)

PERSONNEL IN VISITOR STATUS FREQUENTLY FOUND WITHOUT ESCORT BY SECURITY OFFICERS WHILE WITHIN PA.
(7990 INFRACTION)

FAILURE TO PROVIDE EFFECTIVE COMPENSATORY MEASURES FOR EQUIPMENT OUTAGE.
(7990 INFRACTION)

FAILURE TO TEST EQUIPMENT IN ACCORDANCE WITH ESTABLISHED PROCEDURE.
(7990 INFRACTION)

AS REQUIRED BY SECTION 5.1.5 OF THE VEPCO NUCLEAR POWER STATION QUALITY ASSURANCE MANUAL THE SUPERVISOR OF ENGINEERING SERVICES OR HIS DESIGNEE IS REQUIRED TO REVIEW COMPLETED TEST RESULTS FOR COMPLETENESS, TO DETERMINE IF THE ESTABLISHED ACCEPTANCE CRITERIA HAD BEEN MET, AND TO RECOMMEND FINAL APPROVED BY THE STATION NUCLEAR SAFETY AND OPERATING COMMITTEE. CONTRARY TO THE ABOVE, THE TWO AUXILIARY STEAM GENERATOR FEED PUMPS, 2-FW-P-3A AND 2-FW-P-3B, FAILED TO MEET THE START TIME ACCEPTANCE CRITERIA OF STEPS 6.2.2.5 AND 6.4.3 OF ST-78 WITHOUT IDENTIFYING THE DISCREPANCY. IN ADDITION THE OUTSIDE RECIRCULATION SPRAY PUMP, 2-RS-P-2B FAILED TO START DUE TO AN IMPROPERLY RACKED-IN CIRCUIT BREAKER. RESOLUTION AS TO RETESTING OR REPERFORMING THE TEST WAS NOT IDENTIFIED.

ENFORCEMENT STATUS

FAILURE TO IMPLEMENT PROCEDURES FOR CONTROLLING ACCESS TO PROTECTED AREA AND VITAL AREA.
(8003 INFRACTION)

FAILURE TO IMPLEMENT BADGE CONTROL PROCEDURE.
(8003 INFRACTION)

CONTRARY TO 10 CFR 50.72 BETWEEN MARCH 20, 1980, AND MAY 29, 1980, REQUIRED REPORTS TO THE NRC OPERATIONS CENTER WERE NOT PROPERLY MADE: MARCH 20, 1980, HIGH AIRBORNE IN AUX BUILDING 10 CFR 50.72(1) REPORT NOT MADE; MAY 20, 1980, CONTAINMENT INTEGRITY NOT MAINTAINED REPORT MADE IN EXCESS OF 1 HOUR (10 CFR 50.72(C)); MAY 29, 1980 RCS PRESSURE ISOLATION INADVERTENT, NO 10 CFR 50.72(3) REPORT MADE.
(8009 DEFICIENCY)

CONTRARY TO TS 3.3.3.6 (TABLE 3.3-10) (ORDERS OF 7/20/79 AND 2/11/80) ON MAY 29, 1980, THE ONLY RCS PRESSURE SOURCE WAS NOT OPERABLE BECAUSE OF THE INADVERTENT CLOSURE OF A RECOVERY SYSTEM INTERFACE VALVE (SNS-V2C) WHICH ISOLATED TWO PRESSURE READING INSTRUMENTS FROM THE RCS. THIS RESULTED BECAUSE A PROCEDURE (SPECIAL OPERATING PROCEDURE R-2-8C-18, DATED APRIL 3, 1980, TEMPORARY NUCLEAR SAMPLE SYSTEM FLOWPATH VERIFICATION) UTILIZED VALVE LINEUP REQUIRING SNS-V2C TO BE SHUT.
(8009 INFRACTION)

CONTRARY TO TS 3.6.1.1 (ORDERS OF 7/20/79 AND 2/11/80) ON MAY 20, 1980, BETWEEN 9:00 P.M. TO 9:30 P.M. FOR APPROXIMATELY 5-10 MINUTES CONTAINMENT INTEGRITY WAS NOT MAINTAINED AT REACTOR BUILDING PERSONNEL AIRLOCK NO. 2 WITH THE OUTER DOOR MANUAL PURGE VALVE (DESIGNATED "E" VALVE) AND THE INNER DOOR MANUAL EQUALIZATION VALVE OPEN SIMULTANEOUSLY. THIS RESULTED BECAUSE A PROCEDURE (OPERATING PROCEDURE 2104-4.55, REVISION 1, MAY 16, 1980 REACTOR BUILDING ENTRY AND PRE-DECON) APPROVED PURSUANT TO SPECIFICATION 6.8.2, REQUIRED THE OPENING OF THE OUTER AIRLOCK DOOR IN ACCORDANCE WITH ANOTHER REFERENCED PROCEDURE BUT NEITHER PROCEDURE ADDRESSED THE SHUTTING OF THE "E" VALVE ON THE OUTER DOOR IN THE PROPER SEQUENCE.
(8009 INFRACTION)

CONTRARY TO TS 6.8.1, RG 1.33, PROCEDURE 1410-7-26 PARA. 6.1.1 AND 6.1.4 ON MARCH 29, 1980, CONTRACT PERSONNEL CONDUCTED OPEN FLAME CUTTING IN THE FUEL HANDLING BUILDING WITHOUT IMPLEMENTING THE FIRE PROTECTION PERMIT SYSTEM. AS A RESULT OF THIS, THE CONTROL ROOM WAS NOT AWARE THAT SUCH OPERATIONS WERE OCCURRING: SPARKS WERE SPANNING AN AREA 20-30 FEET FROM THE SOURCE CUTTING WITH FLAMMABLE BOXES WITHIN 5 FEET AND WITH THE CUTTING DONE ON NONTREATED WOOD; NO FIRE EXTINGUISHERS WERE DESIGNATED FOR USE IN THIS PARTICULAR OPERATION, AND THERE WAS NO DOCUMENTATION OF FOLLOWUP BY THE DESIGNATED FIREWATCH.
(8009 INFRACTION)

10 CFR 71.5(A) REQUIRES THAT NRC LICENSEES COMPLY WITH THE APPLICABLE PACKAGING AND TRANSPORTATION REQUIREMENTS OF THE DEPARTMENT OF TRANSPORTATION (DOT) IN 49 CFR PARTS 170-189. A. 49 CFR 173.395(A)(1) REQUIRES THAT MATERIALS BE PACKAGED IN ACCORDANCE WITH DOT SPECIFICATION 7A, TYPE A PACKAGING, AND THAT EACH SHIPPER OF A SPECIFICATION 7A PACKAGE MAINTAIN ON FILE A COMPLETE CERTIFICATION AND SUPPORTING SAFETY ANALYSIS DEMONSTRATING COMPLIANCE WITH THE SPECIFICATION. CONTRARY TO THE ABOVE, ON FEBRUARY 6 AND MARCH 6, 1980, LIQUID RADIOACTIVE MATERIAL WAS DELIVERED IN TYPE A QUANTITIES TO A CARRIER FOR TRANSPORT IN CONTAINERS WHICH WERE NOT AUTHORIZED BY THE SUPPORTING SAFETY ANALYSIS FOR THE SHIPMENT OF LIQUIDS. THE SAFETY ANALYSIS ONLY AUTHORIZED THE PACKAGING OF SOLID RADIOACTIVE MATERIAL.
(8010 VIOLATION)

10 CFR 71.5(A) REQUIRES THAT NRC LICENSEES COMPLY WITH THE APPLICABLE PACKAGING AND TRANSPORTATION REQUIREMENTS OF THE DEPARTMENT OF TRANSPORTATION (DOT) IN 49 CFR PARTS 170-189. B. 49 CFR 173.393(G) REQUIRES LIQUID RADIOACTIVE MATERIAL IN TYPE A QUANTITIES BE PACKAGED IN OR WITHIN A LEAK-RESISTANT AND CORROSION RESISTANT INNER CONTAINMENT VESSEL. CONTRARY TO THE ABOVE, ON FEBRUARY 6 AND MARCH 6, 1980, THE INNER CONTAINMENT VESSELS OF THE PACKAGES LEAKED RADIOACTIVE MATERIAL DURING TRANSPORT DEMONSTRATING THAT THE INNER CONTAINERS WERE NOT LEAK-RESISTANT. IN THE FEBRUARY 6 SHIPMENT, THE VALVE HANDLES WERE NOT REMOVED AND WERE LEFT UNPROTECTED ON THE SAMPLE BOMB, THE INNER CONTAINMENT VESSEL, RESULTING IN THE LEAKAGE. IN THE MARCH 6 SHIPMENT, OF THE TEN POLYETHYLENE BOTTLES SHIPPED AS INNER CONTAINMENT VESSELS, ONE WAS CRUSHED AND THREE OTHERS LEAKED.
(8010 VIOLATION)

TWO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED: FAILURE TO USE LEAK RESISTANT INNER CONTAINMENT VESSEL FOR RADIOACTIVE LIQUID SHIPMENTS; FAILURE TO COMPLY WITH AUTHORIZED PACKAGING FOR A TYPE A SHIPMENT.

50-320/80-14 - JUN 9-13 (15000046/80-72): INSPECTION OF TRAILER 440571, LOADED WITH RADIOACTIVE WASTE PACKAGES. ONE PACKAGE WAS OPENED. A REPRESENTATIVE FROM THE STATE OF WASHINGTON WHO WAS ON SITE DURING THE ENTIRE INSPECTION OPENED AND EXAMINED THE PACKAGE. THE PACKAGE CONFORMED TO THE DESCRIPTION IN THE RSR AND CONTAINED NO FREE STANDING LIQUID. ONE ITEM OF NONCOMPLIANCE WITH DOT/NRC REGULATIONS WAS IDENTIFIED: FAILURE

10 CFR 50.72(A)(8) REQUIRES NUCLEAR POWER PLANT LICENSEES TO NOTIFY THE NRC OPERATIONS CENTER WITHIN ONE HOUR OF ANY ACCIDENTAL, UNPLANNED OR UNCONTROLLED RADIATION RELEASE. CONTRARY TO THE ABOVE, THE LICENSEE FAILED TO REPORT WITHIN ONE HOUR AN ACCIDENTAL, UNPLANNED GASEOUS RELEASE EQUIVALENT TO APPROXIMATELY 12% OF THE TECHNICAL SPECIFICATION LIMIT FOR INSTANTANEOUS RELEASES.
(8012 DEFICIENCY)

TECHNICAL SPECIFICATION 3.12.1.C.4.2 STATES THAT RADIOACTIVE GASEOUS WASTES COLLECTED IN THE GAS DECAY TANKS SHALL BE HELD UP TO A MINIMUM OF 45 DAYS BEFORE BEING RELEASED EXCEPT DURING PURGE AND FILL OPERATIONS ASSOCIATED WITH REFUELING AND REACTOR STARTUP. CONTRARY TO THE ABOVE, ON MAY 6, 1980, A PORTION OF THE CONTENTS OF GAS DECAY TANK 1B WAS RELEASED WITHOUT BEING HELD FOR 45 DAYS.

SUMMARY

INSPECTION SUMMARY

Inspection on February 22 and 26, (80-13): This report details the inspection of Trailer 442054 which was part of the inspection conducted February 19-29, 1980, at NECO, Richland, Washington. A State of Washington representative was onsite. One drum was opened on February 26, 1980, by Zion Station personnel with approval of Washington State representatives. Maximum dose rate on the surface of the transport trailer was 220 mR/hr. This was in noncompliance with DOT regulations. It appears that the Department of Transportation and Region III are the appropriate organizations to take enforcement actions.

Inspection on June 1 through July 31, (80-14): Routine, unannounced resident inspection of containment purging, regulatory guide 1.108, diesel generator testing, TMI mods, licensing administration, containment integrated leak rate testing, auxiliary feedwater pump requirements, violation of low pressure over pressure protection, event V check valves, steam generator snubbers, damage to 1A charging pump, steam generator tube rupture procedure, W-2 switches, inadvertent boron dilution at cold shutdown, unresolved items, violation of dilution requirements, operational safety, maintenance, surveillance, LER's, IE Bulletin followup, refueling activities, maintenance during refueling, retests and procedure changes, refueling plant operations, spent fuel storage racks, and onsite review committee. The inspection involved 442 inspector-hours onsite by three NRC inspectors including 51 inspector-hours during off-shifts. Of the areas inspected, no items of noncompliance were identified.

Inspection on July 22, (80-15): Review of specifications and procedures, observation of work, and review of documentation for installation of spent fuel storage racks; followup on IE Bulletin 80-08 "Examination of Containment Liner Penetration Welds." The inspection involved eight inspector-hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

REACTOR-YEARS OF EXPERIENCE

08/31/80

The total of Reactor years of experience is as the sum of all calendar days for each unit, from the date that electricity was first generated until a final shutdown date or the status date, whichever comes first, divided by 365.25 days/year.

If a date is unknown, the first day of the first month of operation is substituted. Units which have not yet generated electricity but which are licensed are listed but not included in the computation.

OPERATING UNITS STATUS REPORT

DATA AS OF 09/30/80

LICENSED OPERATING REACTORS

AUTHORIZATION AND CLEARANCE

THE U.S. NUCLEAR REGULATORY COMMISSION'S OFFICE OF MANAGEMENT AND PROGRAM ANALYSIS PUBLISHES THIS MONTHLY STATUS REPORT "AS PART OF THE REPORTING REQUIREMENTS IN SECTION 50.36 OF 10 CFR PART 50 UNDER GAO CLEARANCE NUMBER B-180225, WITH AN EXPIRATION DATE OF SEPTEMBER 30, 1981," AS STATED IN THE OCTOBER 3, 1978 LETTER FROM JOHN M. LOVELADY, ASSISTANT DIRECTOR, GENERAL GOVERNMENT DIVISION, U. S. GENERAL ACCOUNTING OFFICE, TO J.M. FELTON, DIRECTOR, DIVISION OF RULES AND RECORDS, U.S. NUCLEAR REGULATORY COMMISSION.

STATEMENT OF PURPOSE

The U. S. Nuclear Regulatory Commission's monthly OPERATING UNITS STATUS REPORT — LICENSED OPERATING REACTORS, provides data on the operation of nuclear units as timely and accurately as possible. This information is collected by the Office of Management and Program Analysis from the Headquarters Staff of NRC's Office of Inspection and Enforcement, from NRC's Regional Offices, and from utilities. Since all of the data concerning operation of the units is provided by the utility operators less than two weeks after the end of the month, necessary corrections to published information are shown on the ERRATA page.

This report is divided into three sections: the first contains monthly highlights and statistics for commercial operating units, and errata from previously reported data; the second is a compilation of detailed information on each unit, provided by NRC Regional Offices, IE Headquarters and the Utilities; and the third section is an appendix for miscellaneous information such as spent fuel storage capability, reactor-years of experience and non-power reactors in the United States.

The percentage computations, Items 19 through 24 in Section 2, the vendor capacity factors on page 1-4, and actual vs. potential energy production on Page 1-2 are computed from actual power production from the period of consideration. The percentages listed in power generation on Page 1-2 are computed as an arithmetical average. The factors for the life-span of each unit (the "Cumulative" column) are reported by the utility and are not entirely re-computed by NRC. Utility power production data is checked for consistency with previously submitted statistics.

In some cases, the numbers in the "Cumulative" column may have been totaled from a date that is different from the date of commercial operation. In these cases, the column is noted with an explanation of the nature of the change on each individual plant page in Section 2.

It is hoped this status report proves informative and helpful to all agencies and individuals interested in analyzing trends in the nuclear industry which might have safety implications, or in maintaining an awareness of the U. S. energy situation as a whole.

GLOSSARY

AVERAGE DAILY POWER LEVEL (MWe)	The net electrical energy generated during the day (measured from 0001 to 2400 hours inclusive) in megawatts hours divided by 24 hours.
LICENSED THERMAL POWER (MWt)	The maximum thermal power of the reactor authorized by the NRC, expressed in megawatts.
DATE OF COMMERCIAL OPERATION	Date unit was declared by utility owner to be available for the regular production of electricity; usually related to satisfactory completion of qualification tests as specified in the purchase contract and to accounting policies and practices of utility.
DESIGN ELECTRICAL RATING (DER) (Net MWe)	The nominal net electrical output of the unit specified by the utility and used for the purpose of plant design.
FORCED OUTAGE	An outage required to be initiated no later than the weekend following discovery of an off-normal condition.
FORCED OUTAGE HOURS	The clock hours during the report period that a unit is unavailable due to forced outages.
GROSS ELECTRICAL ENERGY GENERATED (MWH)	Electrical output of the unit during the report period as measured at the output terminals of the turbine generator, in megawatts hours.
GROSS HOURS	The clock hours from the beginning of a specified situation until its end. For outage durations, the clock hours during which the unit is not in power production.
GROSS THERMAL ENERGY GENERATED (MWH)	The thermal energy produced by the unit during the report period as measured or computed by the licensee in megawatt hours.
HOURS GENERATOR ON-LINE	Also, "Unit Service Hours." The total clock hours in the report period during which the unit operated with breakers closed to the station bus. These hours added to the total outage hours experienced by the unit during the report period, shall equal the hours in the report period.
HOURS IN REPORTING PERIOD	For units in power ascension at the end of the period, the gross hours from the beginning of the period or the first electrical production, whichever comes last, to the end of the period. For units in commercial operation at the end of the period, the gross hours from the beginning of the period or of commercial operation, whichever comes last, to the end of the period or decommissioning, whichever comes first.
HOURS REACTOR CRITICAL	The total clock hours in the report period during which the reactor sustained a controlled chain reaction.
MAXIMUM DEPENDABLE CAPACITY (GROSS) (MDC Gross) (Gross MWe)	Dependable main-unit gross capacity, winter or summer, whichever is smaller. The dependable capacity varies because the unit efficiency varies during the year due to cooling water temperature variations. It is the gross electrical output as measured at the output terminals of the turbine generator during the most restrictive seasonal conditions (usually summer).
MAXIMUM DEPENDABLE CAPACITY (NET) (MDC Net) (Net MWe)	Maximum Dependable Capacity (Gross) less the normal station service loads.
NAMEPLATE RATING (Gross MWe)	The nameplate power designation of the generator in megavolt amperes (MVA) times the nameplate power factor of the generator. NOTE: The nameplate rating of the generator may not be indicative of the maximum or dependable capacity, since some other item of equipment of a lesser rating (e.g., turbine) may limit unit output.
NET ELECTRICAL ENERGY GENERATED	Gross electrical output of the unit measured at the output terminals of the turbine generator during the reporting period, minus the normal station service electrical energy utilization. If this quantity is less than zero, a negative number should be recorded.
OUTAGE	A situation in which no electrical production takes place.
OUTAGE DATE	As reported on Appendix D of Reg. Guide 1.16, the date of the start of the outage. If continued from a previous month, report the same outage date but change "Method of Shutting Down Reactor" to "4 (Other)" and add a note: "Continued from previous month."
OUTAGE DURATION	The total clock hours of the outage measured from the beginning of the report period or the outage, whichever comes last, to the end of the report period or the outage, whichever comes first.
OUTAGE NUMBER	A number unique to the outage assigned by the licensee. The same number is reported each month in which the outage is in progress. One format is "76-05" for the fifth outage to occur in 1976.
PERIOD HOURS	See "Hours in Reporting Period."
POWER REDUCTION	A reduction in the Average Daily Power Level of more than 20% from the previous day. All power reductions are defined as outage of zero hours durations for the purpose of computing unit service and availability factors, and forced outage rate.

REACTOR AVAILABLE HOURS	The total clock hours in the report period during which the reactor was critical or was capable of being made critical. (Reactor Reserve Shutdown Hours + Hours Reactor Critical.)
REACTOR AVAILABILITY FACTOR	$\frac{\text{Reactor Available Hours} \times 100}{\text{Period Hours}}$
REACTOR RESERVE SHUTDOWN	The cessation of criticality in the reactor for administrative or other similar reasons when operation could have been continued.
REACTOR RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the reactor is in reserve shutdown mode. NOTE: No credit is given for NRC imposed shutdowns.
REACTOR SERVICE FACTOR	$\frac{\text{Hours Reactor Critical} \times 100}{\text{Period Hours}}$
REPORT PERIOD	Usually, the preceding calendar month. Can also be the preceding calendar year, (Year-to-Date), or the life-span of a unit (cumulative).
RESTRICTED POWER LEVEL	Maximum net electrical generation to which the unit is restricted during the report period due to the state of equipment, external conditions, administrative reasons, or a direction by NRC.
SCHEDULED OUTAGE	Planned removal of a unit from service for refueling, inspection, training, or maintenance. Those outages which do not fit the definition of "Forced Outage" perforce are "Scheduled Outages."
STARTUP AND POWER ASCENSION TEST PHASE	Period following initial criticality during which the unit is tested at successively higher levels, culminating with operation at full power for a sustained period and completion of warranty runs. Following this phase, the utility generally considers the unit to be available for commercial operation.
UNIT	The set of equipment uniquely associated with the reactor, including turbine generators, and ancillary equipment, considered as a single electrical energy production facility.
UNIT AVAILABLE HOURS	The total clock hours in the report period during which the unit operated on-line or was capable of such operation. (Unit Reserve Shutdown Hours + Hours Generator On-Line.)
UNIT AVAILABILITY FACTOR*	$\frac{\text{Unit Available Hours} \times 100}{\text{Period Hours}}$
UNIT CAPACITY FACTORS	
– Using Licensed Thermal Power	$\frac{\text{Gross Thermal Energy Generated} \times 100}{\text{Period Hours} \times \text{Lic. Thermal Power}}$
– Using Nameplate Rating	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{Nameplate Rating}}$
– Using DER	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{DER}}$
– Using MDC Gross	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Gross}}$
– Using MDC Net	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Net}}$

NOTE: If MDC Gross and/or MDC Net have not been determined, the DER is substituted for this quantity for Unit Capacity Factor calculations.

UNIT FORCED OUTAGE RATE	$\frac{\text{Forced Outage Hours}}{\text{Unit Service Hours} + \text{Forced Outage Hours}}$
UNIT RESERVE SHUTDOWN	The removal of the unit from on-line operation for economic or other similar reasons when operation could have been continued.
UNIT RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the unit was in reserve shutdown mode.
UNIT SERVICE FACTOR	$\frac{\text{Unit Service Hours} \times 100}{\text{Period Hours}}$
UNIT SERVICE HOURS	See "Hours Generator On-Line."

Capacity factor in this page, denoted as CFMDC, is a function of the net maximum dependable capacity. See the corresponding definition in the Glossary. The vendor averages are computed by the formula:

$$\frac{\text{Net Electrical Energy Produced by Vendor}}{\text{Potential Electrical Production By Vendor In This Month.}} \text{ X } 100\%$$

AVERAGE DAILY POWER LEVEL FOR ALL COMMERCIALLY OPERATING UNITS

This chart depicts the average daily power level for the units in commercial operation during the month.

The straight line on the graph labelled "SUM OF MAX. DEPEND. CAP." is plotted at the value shown by summing the separate maximum dependable capacities of the commercially operating units (in Net MWe). The plot shown below the line is calculated by summing the separate average daily power levels of the commercially operating units for each day of the month.

The scale on the left vertical axis runs in 1,000 MWe increments from 0 to 55,000 MWe (Net). The right vertical axis shows the percentage in 10% increments, up to 100% of the "SUM OF MAX. DEPEND. CAP."

It should be recognized that the 100% line would be obtainable only if all of the commercially operating units operated at 100% capacity, 24 hours per day, for the entire month. In other words, since any power generator must occasionally shut down to refuel and/or perform needed maintenance, and also since 100% capacity production is not always required by power demands, the 100% line is a theoretical goal and not a practical one.

INSPECTION SUMMARY

Inspection conducted during the period of July 21-25, 1980 (80-13): Routine, unannounced inspection of Security Plan; Security Program Audit; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Alarm Stations; Detection Aids; Testing and Maintenance; Power Supply. Within the nine areas inspected, four items of noncompliance were identified (infraction - vital area physical barrier; two infractions involving detection aids; and infraction - intrusion alarm testing).

Management meeting conducted on August 20, 1980 (80-14): Special announced management meeting to discuss the region's first annual evaluation of the licensee's performance relative to activities at the ANO site during the period of January 1, 1979 through August 19, 1980. Of the seventeen functional areas evaluated, the licensee's performance in thirteen areas was such that no change in the frequency or scope of inspection program for those areas is recommended. The licensee's performance in four areas (training, security, reporting, and quality control) was such that increased inspection effort is planned in these areas.

Routine, announced inspection including Surveillance Observation, Inspection conducted during period July 22-August 21, 1980 (80-15): Maintenance, Operational Safety Verification, Followup on IE Bulletins, and Followup on previously identified items.
Within the five (5) areas inspected, one item of noncompliance was identified (infraction - anti-contamination clothing, in one area.

CONTRARY TO 10CFR20.103 AND REG GUIDE 8.15, A PAINTER PERFORMING GRINDING IN THE TORUS WAS PROVIDED WITH A RESPIRATORY PROTECTIVE DEVICE WHICH DID NOT PROVIDE A PROTECTION FACTOR GREATER THAN THE MULTIPLE BY WHICH THE PEAK CONCENTRATION OF RADIOACTIVE MATERIAL EXCEEDED THE VALUES SPECIFIED IN TABLE 1 COL. 1 OF APPENDIX B TO 10CFR 20.
(8007 INFRACTION)

CONTRARY TO TECH SPEC 6.3.5, DURING THE PERIOD MAY 5-16, 1980 INDIVIDUALS WERE OBSERVED ENTERING THE REACTOR DRYWELL, A HIGH RADIATION AREA, WITHOUT NOTIFYING THE SHIFT SUPERVISOR AND WITHOUT A DOSE RATE INSTRUMENT AS REQUIRED.
(8007 INFRACTION)

CONTRARY TO TECH SPEC 6.1.4 WHICH STATES THAT THE MINIMUM QUALIFICATIONS OF PLANT PERSONNEL SHALL MEET THE REQUIREMENTS DESCRIBED IN ANSI N18.1-1971, TWO HEALTH PHYSICS TECHNICIANS, HAVING APPROXIMATELY SIX AND TEN MONTHS OF WORKING EXERIENCE, WERE APPOINTED TO RESPONSIBLE POSITIONS PRIOR TO ATTAINING TWO YEARS OF EXPERIENCE REQUIRED BY ANSI N18.1-1971, SECT 4.5.2.
(8007 INFRACTION)

10 CFR 55 APPENDIX A, REQUALIFICATION PROGRAM REQUIREMENTS, REQUIRES THAT THE REQUALIFICATION PROGRAM INCLUDE PREPLANNED LECTURES ON A REGULAR AND CONTINUING BASIS THROUGHOUT THE LICENSE PERIOD IN THOSE AREAS WHERE ANNUAL OPERATOR AND SENIOR OPERATOR WRITTEN EXAMINATIONS INDICATE THAT SCOPE AND DEPTH OF COVERAGE IS NEEDED. THIS IS AMPLIFIED IN COOPER NUCLEAR STATION'S REQUALIFICATION PROGRAM APPROVED BY NRR CN AUG 18, 1976 WHICH STATES, "WITH THE EXCEPTION OF SPECIAL ACTIVITY PERIODS, SUCH AS REFUELING OUTAGES, THE LECTURE SERIES WILL BE SPREAD REASONABLY EVENLY THROUGHOUT EACH YEAR." 10 CFR 55, APPENDIX A, REQUALIFICATION PROGRAM REQUIREMENTS, ALSO REQUIRES THE REQUALIFICATION PROGRAM INCLUDE WRITTEN EXAMINATIONS WHICH DETERMINE LICENSED OPERATOR'S AND SENIOR OPERATOR'S KNOWLEDGE OF SUBJECTS COVERED IN THE REQUALIFICATION PROGRAM AND PROVIDE A BASIS FOR EVALUATING THEIR KNOWLEDGE OF ABNORMAL AND EMERGENCY PROCEDURES. THE LICENSEE'S APPROVED REQUALIFICATION PROGRAM STATES, "WRITTEN EXAMINATIONS SHALL BE GIVEN COVERING MATERIAL PRESENTED IN THE REQUALIFICATION PROGRAM LECTURE SERIES." CONTRARY TO THE ABOVE: 1. THE LICENSEE HAD NOT INITIATED A REQUALIFICATION PROGRAM LECTURE SERIES FOR THE 1980 TRAINING CYCLE BEGINNING IN FEB 1980. 2. REQUALIFICATION QUIZ NO. 22, ADMINISTERED IN NOV 1979 HAD NOT BEEN GRADED TO DETERMINE THE KNOWLEDGE THAT LICENSED OPERATORS AND SENIOR OPERATORS HAD IN THE SUBJECTS COVERED IN THE REQUALIFICATION PROGRAM LECTURE SERIES.
(8013 INFRACTION)

THE LICENSEE'S APPROVED OPERATOR REQUALIFICATION PROGRAM STATES THAT "A PLANNED LECTURE SERIES SHALL BE PRESENTED COVERING, AS A MINIMUM, THOSE AREAS WHERE ANNUAL EXAMINATIONS INDICATE THE NEED FOR ADDITIONAL TRAINING IN THE FOLLOWING SUBJECTS: "1. SUMMARY

INSPECTION SUMMARY

+ Health Physics Appraisal on June 18 through July 2, (80-13): Special, announced appraisal of health physics program, including organization, management, training and qualification, exposure control, radiological controls, surveillance, instrumentation, facilities and equipment, ALARA, and emergency response. The inspection involved approximately 540 inspector-hours onsite by five NRC inspectors. Significant weaknesses were identified in the health physics program in the areas of organization and management, training and qualificaitions, access control, contamination control, surveillance, instruments, facilities, and emergency response. Three apparent items of noncompliance were identified (failure to follow procedures; potential unrestricted area dose exceeding two millirems in one hour; and inadequate control of high radiation area access).

+ Meeting on August 21, (80-15): Dresden cooling lake dike seepage and remedial measures to be taken to preclude further seepage and effects on the riverbanks and dike structure.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY 10 CFR 50.59 STATES, IN PART, THAT THE HOLDER OF A LICENSE AUTHORIZING OPERATION OF A PRODUCTION OR UTILIZATION FACILITY MAY MAKE CHANGES IN THE FACILITY AS DESCRIBED IN THE SAFETY ANALYSIS REPORT, WITHOUT PRIOR COMMISSION APPROVAL, UNLESS THE PROPOSED CHANGE INVOLVES A CHANGE IN THE TECHNICAL SPECIFICATIONS INCORPORATED IN THE LICENSE OR AN UNREVIEWED SAFETY QUESTION. THE LICENSEE SHALL MAINTAIN RECORDS OF CHANGES IN THE FACILITY WHICH SHALL INCLUDE A WRITTEN SAFETY EVALUATION WHICH PROVIDES THE BASIS FOR THE DETERMINATION THAT THE CHANGE DOES NOT INVOLVE AN UNREVIEWED SAFETY QUESTION. CONTRARY TO THE ABOVE, LEAD SHIELDING WAS PLACED ON AT LEAST TWO SECTIONS OF RESIDUAL HEAT REMOVAL SYSTEM PIPING LOCATED IN THE NORTHEAST DIAGONAL OF THE UNIT 1 REACTOR BUILDING WITHOUT PERFORMING AN SAFETY EVALUATION TO DETERMINE THAT THE INSTALLATION DID NOT INVOLVE AN UNREVIEWED SAFETY QUESTION.
(8027 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.1, WRITTEN PROCEDURES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED COVERING THE APPLICABLE PROCEDURES RECOMMENDED IN APPENDIX 'A' OF REGULATORY GUIDE 1.33. REGULATORY GUIDE 1.33, APPENDIX A STATES IN PART THAT PROCEDURES SHOULD BE PROVIDED WHICH CONTROL RADIOACTIVITY AND LIMITS PERSONNEL RADIATION EXPOSURE. CONTRARY TO HNP-8009, A WORKER, WHO WAS NOT A MEMBER OF THE HEALTH PHYSICS STAFF, WAS OBSERVED ON JUNE 24, 1980 LEAVING A HAND AND FOOT MONITOR AFTER IT ALARMED INDICATED HIS HAND AND FEET WERE CONTAMINATED. THE WORKER PROCEEDED TO DECON HIS HAND AND SHOES WITHOUT NOTIFYING HEALTH PHYSICS. ON JUNE 23, 1980 A CHEMISTRY TECHNICIAN WAS OBSERVED LEAVING THE HAND AND FOOT MONITOR AFTER IT ALARMED INDICATING HIS HANDS WERE CONTAMINATED. THE TECHNICIAN PROCEDED TO THE CHEMISTRY LAB. CONTRARY TO HNP 8013, THE RESULTS OF AT LEAST TWELVE PARTICULATE FILTERS OR CHARCOAL CARTRIDGES ANALYZED BETWEEN APRIL 1, 1980 AND JUNE 19, 1980 EXCEEDED 1X10-9 μCi/ML FOR ALL RADIOACTIVITY AND NO ANALYSIS WAS PERFORMED TO IDENTIFY EACH RADIONUCLIDE PRESENT. CONTRARY TO HNP 8005, A WORKER WAS OBSERVED ON JUNE 24, 1980 TAKING A BAG OF TOOLS OUT OF THE RADIATION CONTROL AREA WITHOUT A SURVEY AND UNCONDITIONED RELEASE BY HEALTH PHYSICS. CONTRARY TO HNP 8010, ON SEVERAL OCCASIONS BETWEEN JUNE 16-27, 1980 THE INSPECTORS OBSERVED FULL-FACE RESPIRATORS DISCARDED ON THE FLOOR AT THE EXIT POINT FOR WORK AREAS AND SURVEYS FOR SMEARABLE CONTAMINATION ARE NOT PERFORMED ON RESPIRATORS FOLLOWING CLEANING AND PRIOR TO REUSE. CONTRARY TO HNP 8012, THE RESULTS OF CONTAMINATION SURVEY PERFORMED AT 2:20 P.M. AND 3:30 P.M. ON JUNE 18, 1980 WERE NOT DOCUMENTED.
(8027 INFRACTION)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION I AND XVI AND SECTIONS 17.2.1.1.3 AND 17.2.18 OF THE ACCEPTED QA PROGRAM, THE QUALITY ASSURANCE DEPARTMENT DOES NOT EFFECTIVELY ASSURE CONFORMANCE TO QUALITY STANDARDS IN THAT IT DOES NOT ASSURE PROMPT CORRECTION OF CONDITIONS ADVERSE TO QUALITY. SPECIFICALLY, BETWEEN OCTOBER 27, 1978 AND APRIL 11, 1980, THE NUCLEAR REGULATORY COMMISSION HAS ISSUED FIVE CITATIONS FOR FAILURE TO TAKE CORRECTIVE ACTIONS BY THE MECHANISMS DEFINED FOR CORRECTIVE ACTION WITHIN THE QA PROGRAM (REPORTS 50-366/78-44; 50-321/79-07, 50-366/79-08; 50-366/79-09/ 50-321/79-11; 50-366/79-15; AND 50-321, 50-366/80-17). FURTHER, OF 119 QA PROGRAM AFR'S WRITTEN IN 1978 AND 135 WRITTEN IN 1979, 9 ITEMS FROM 1978 AND 35 ITEMS FROM 1979 REMAIN UNCORRECTED AS OF JULY 11, 1980. IN ADDITION, OF 45 AFR'S WRITTEN IN 1980 WHICH REQUIRED COMPLETION OF CORRECTIVE ACTION ON OR BEFORE MARCH 13, 1980, 12 REMAIN UNCORRECTED AS OF JULY 11, 1980 (I.E., OVERDUE BY 120 DAYS OR MORE).
(8028 INFRACTION)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION II, AND SECTION 17.2 OF THE ACCEPTED QA PROGRAM, THE STATUS AND ADEQUACY OF THE QA PROGRAM WAS NOT REGULARLY REVIEWED IN THAT OF THE 45 PROCEDURES IN THE QA DEPARTMENT PROCEDURE MANUAL, 23 HAD NOT BEEN REVIEWED FOR PERIODS IN EXCESS OF TWO YEARS. TWO PROCEDURES WERE LAST REVIEWED IN 1975; SEVEN PROCEDURES WERE LAST REVIEWED IN 1976; THREE PROCEDURES WERE LAST REVIEWED IN 1977; AND ELEVEN PROCEDURES WERE LAST REVIEWED IN THE FIRST HALF OF 1978. SINCE REVIEW OF PROVISIONS IS NOT DOCUMENTED, THE LATEST REVISION DATE WAS USED TO DETERMINE THE DATE OF LAST REVIEW. (A REVISION IS CONSIDERED A REVIEW UNDER PARAGRAPH 5.2.15 OF ANSI N18-1976).

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION V, AND SECTION 17.2.5 OF THE ACCEPTED QA PROGRAM, THE PROCEDURE COVERING THE QUALITY CONTROL (QC) INSPECTION ACTIVITY (HNP-821, "QUALITY CONTROL WORK INSPECTION," REVISION 5, DATED 9/78) DOES NOT CONTAIN EITHER QUALITATIVE OR QUANTITATIVE ACCEPTANCE CRITERIA FOR DETERMINING WHEN THE INSPECTION ACTIVITY MUST BE ACCOMPLISHED. THE PROCEDURE STATES THAT A QUALITY CONTROL SPECIALIST REVIEWS MAINTENANCE REQUESTS (MR'S) AND THEN DETERMINES IF AN INSPECTION IS REQUIRED. THE DECISIION IS TO BE MADE "IF THE WORK INVOLVED IS SIGNIFICANT ENOUGH TO WARRANT QC INSPECTION." THE INSPECTOR FOUND NO QC INSPECTION PERFORMED ON ANY MR'S ASSOCIATED WITH INSTRUMENTATION AND CONTROL WORK (ONE CASE OF IMPROPER ALTERNATE INSPECTION WAS CONDUCTED) AND NO INVOLVEMENT IN NON-MR AREAS SUCH AS OPERATIONS AND HEALTH PHYSICS.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY 10 CFR 50.59 STATES, IN PART, THAT THE HOLDER OF A LICENSE AUTHORIZING OPERATION OF A PRODUCTION OR UTILIZATION FACILITY MAY MAKE CHANGES IN THE FACILITY AS DESCRIBED IN THE SAFETY ANALYSIS REPORT, WITHOUT PRIOR COMMISSION APPROVAL, UNLESS THE PROPOSED CHANGE INVOLVES A CHANGE IN THE TECHNICAL SPECIFICATIONS INCORPORATED IN THE LICENSE OR AN UNREVIEWED SAFETY QUESTION. THE LICENSEE SHALL MAINTAIN RECORDS OF CHANGES IN THE FACILITY WHICH SHALL INCLUDE A WRITTEN SAFETY EVALUATION WHICH PROVIDES THE BASIS FOR THE DETERMINATION THAT THE CHANGE DOES NOT INVOLVE AN UNREVIEWED SAFETY QUESTION. CONTRARY TO THE ABOVE, LEAD SHIELDING WAS PLACED ON AT LEAST TWO SECTIONS OF RESIDUAL HEAT REMOVAL SYSTEM PIPING LOCATED IN THE NORTHEAST DIAGONAL OF THE UNIT 1 REACTOR BUILDING WITHOUT PERFORMING A SAFETY EVALUATION TO DETERMINE THAT THE INSTALLATION DID NOT INVOLVE AN UNREVIEWED SAFETY QUESTION.
(8027 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.1, WRITTEN PROCEDURES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED COVERING THE APPLICABLE PROCEDURES RECOMMENDED IN APPENDIX "A" OF REGULATORY GUIDE 1.33. REGULATORY GUIDE 1.33, APPENDIX A STATES IN PART THAT PROCEDURES SHOULD BE PROVIDED WHICH CONTROL RADIOACTIVITY AND LIMITS PERSONNEL RADIATION EXPOSURE. CONTRARY TO HNP-8003, A WORKER, WHO WAS NOT A MEMBER OF THE HEALTH PHYSICS STAFF, WAS OBSERVED ON JUNE 24, 1980 LEAVING A HAND AND FOOT MONITOR AFTER IT ALARMED INDICATED HIS HAND AND FEET WERE CONTAMINATED. THE WORKER PROCEEDED TO DECON HIS HANDS AND SHOES WITHOUT NOTIFYING HEALTH PHYSICS. ON JUNE 23, 1980 A CHEMISTRY TECHNICIAN WAS OBSERVED LEAVING THE HAND AND FOOT MONITOR AFTER IT ALARMED INDICATING HIS HANDS WERE CONTAMINATED. THE TECHNICIAN PROCEDED TO THE CHEMISTRY LAB. CONTRARY TO HNP 8013, THE RESULTS OF AT LEAST TWELVE PARTICULATE FILTERS OR CHARCOAL CARTRIDGES ANALYZED BETWEEN APRIL 1, 1980 AND JUNE 19, 1980 EXCEEDED 1X10-9 UCI/ML FOR ALL RADIOACTIVITY AND NO ANALYSIS WAS PERFORMED TO IDENTIFY EACH RADIONUCLIDE PRESENT. CONTRARY TO HNP 8035, A WORKER WAS OBSERVED ON JUNE 24, 1980 TAKING A BAG OF TOOLS OUT OF THE RADIATION CONTROL AREA WITHOUT A SURVEY AND UNCONDITIONED RELEASE BY HEALTH PHYSICS. CONTRARY TO HNP 8010, ON SEVERAL OCCASIONS BETWEEN JUNE 16-27, 1980 THE INSPECTORS OBSERVED FULL-FACE RESPIRATORS DISCARDED ON THE FLOOR AT THE EXIT POINT FOR WORK AREAS AND SURVEYS FOR SMEARABLE CONTAMINATION ARE NOT PERFORMED ON RESPIRATORS FOLLOWING CLEANING AND PRIOR TO REUSE. CONTRARY TO HNP 8012, THE RESULTS OF CONTAMINATION SURVEY PERFORMED AT 2:20 P.M. AND 3:30 P.M. ON JUNE 18, 1980 WERE NOT DOCUMENTED.
(8027 INFRACTION)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION I AND XVI AND SECTIONS 17.2.1.1.3 AND 17.2.18 OF THE ACCEPTED QA PROGRAM, THE QUALITY ASSURANCE DEPARTMENT DOES NOT EFFECTIVELY ASSURE CONFORMANCE TO QUALITY STANDARDS IN THAT IT DOES NOT ASSURE PROMPT CORRECTION OF CONDITIONS ADVERSE TO QUALITY. SPECIFICALLY, BETWEEN OCTOBER 27, 1978 AND APRIL 11, 1980, THE NUCLEAR REGULATORY COMMISSION HAS ISSUED FIVE CITATIONS FOR FAILURE TO TAKE CORRECTIVE ACTIONS BY THE MECHANISMS DEFINED FOR CORRECTIVE ACTION WITHIN THE QA PROGRAM (REPORTS 50-366/78-44; 50-321/79-07, 50-366/79-08; 50-366/79-09/ 50-321/79-11; 50-366/79-15; AND 50-321, 50-366/80-17). FURTHER, OF 119 QA PROGRAM AFR'S WRITTEN IN 1978 AND 135 WRITTEN IN 1979, 9 ITEMS FROM 1978 AND 35 ITEMS FROM 1979 REMAIN UNCORRECTED AS OF JULY 11, 1980. IN ADDITION, OF 45 AFR'S WRITTEN IN 1980 WHICH REQUIRED COMPLETION OF CORRECTIVE ACTION ON OR BEFORE MARCH 13, 1980, 12 REMAIN UNCORRECTED AS OF JULY 11, 1980 (I.E., OVERDUE BY 120 DAYS OR MORE).
(8028 INFRACTION)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION II, AND SECTION 17.2 OF THE ACCEPTED QA PROGRAM, THE STATUS AND ADEQUACY OF THE QA PROGRAM WAS NOT REGULARLY REVIEWED IN THAT OF THE 45 PROCEDURES IN THE QA DEPARTMENT PROCEDURE MANUAL, 23 HAD NOT BEEN REVIEWED FOR PERIODS IN EXCESS OF TWO YEARS. TWO PROCEDURES WERE LAST REVIEWED IN 1975; SEVEN PROCEDURES WERE LAST REVIEWED IN 1976; THREE PROCEDURES WERE LAST REVIEWED IN 1977; AND ELEVEN PROCEDURES WERE LAST REVIEWED IN THE FIRST HALF OF 1978. SINCE REVIEW OF PROVISIONS IS NOT DOCUMENTED, THE LATEST REVISION DATE WAS USED TO DETERMINE THE DATE OF LAST REVIEW. (A REVISION IS CONSIDERED A REVIEW UNDER PARAGRAPH 5.2.15 OF ANSI N18-1976).
(8028 DEFICIENCY)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION IV, AND SECTION 17.2 OF THE ACCEPTED QA PROGRAM, THE LICENSEE HAS NOT ESTABLISHED MEASURES TO ASSURE THAT REQUIREMENTS ARE INCLUDED IN PROCUREMENT DOCUMENTS IN THAT THERE ARE NO PROVISIONS FOR CONTROLLING CHANGES MADE TO PURCHASE REQUISITIONS. THE INSPECTOR DETERMINED BY INTERVIEW WITH RESPONSIBLE MANAGERS, THAT CHANGES TO PURCHASE REQUISITIONS ARE MADE AFTER THESE DOCUMENTS HAVE BEEN TRANSMITTED TO THE COMPANY OFFICES FROM THE PLANT SITE AND WITHOUT THE SAME DEGREE OF CONTROL UTILIZED IN THE DOCUMENTS' PREPARATION.

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 6.8.1 REQUIRES IMPLEMENTATION OF PROCEDURES AS RECOMMENDED IN APPENDIX A OF REGULATORY GUIDE 1.33, WHICH INCLUDES ADMINISTRATIVE PROCEDURES FOR EQUIPMENT CONTROL. LICENSEE ADMINISTRATIVE PROCEDURE 5.0, PARAGRAPH 5.1.12.7, CONTROLS RETURN OF EQUIPMENT FROM MAINTENANCE UNDER AN EQUIPMENT OUTAGE REQUEST (EOR) AND REQUIRES COMPLETION OF ADMINISTRATIVE REVIEW AND RELEASE, AND OTHER EOR SIGNOFFS, BEFORE EQUIPMENT CAN BE CONSIDERED OPERABLE. CONTRARY TO THE ABOVE, NI-003 (A WIDE-RANGE NUCLEAR POWER INSTRUMENT) WAS IMPROPERLY RETURNED FROM MAINTENANCE UNDER AN EOR ON JULY 10, 1980. THE INSTRUMENT WAS RELIED ON AS OPERABLE FOR A PLANT CRITICALITY AT 1230 HOURS (EDT), BEFORE THE EOR WAS PROPERLY COMPLETED. (8013 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENTS

- The reactor was manually tripped from significant power (88%) on August 26, 1980, following loss of a condensate pump. Plant response was normal; all systems performing as required. (80-15)

MANAGERIAL ITEMS

- A proposed imposition of a civil penalty in the amount of $16,000.00 was issued to the licensee on September 16, 1980, regarding incorrect positioning of safety-related valves on July 25-27 and August 19, 1980. (80-12)
- Effective September 1, 1980, Mr. James S. Rang assumed duties as Superintendent, Operations and Maintenance. He replaces Mr. H. W. Keiser, who left the licensee for a position at the Susquehanna Nuclear Plant. Mr. Rang formerly held the same position at the Big Rock Point Nuclear Plant. (80-15)
- Also effective September 1, 1980, the Quality Control group was transferred from the Technical Department to the Quality Assurance Department. Routine group activities and responsibilities are unchanged. (80-15)

PLANT STATUS

- Operating routinely.

LAST IE SITE INSPECTION DATE: August 4-29, 1980

INSPECTION REPORT NO: 80-15

SUMMARY

INSPECTION SUMMARY

- Inspection on July 29 and August 19-20, (80-12): Reactive, announced inspection to review the circumstance and significance associated with the reported incorrect position of containment sump isolation valve CV-3030 and misoperation of the Safety Injection and Refueling Water (SIRW) Tank isolation valve CV-3031. The inspection involved 30 inspector-hours onsite by four NRC inspectors including six inspector-hours onsite during off-shifts. Five items of noncompliance were identified (degraded ECCS pumps; degraded containment spray pumps; failure to maintain containment integrity; failure to promptly report significance of incorrect valve position and failure to follow procedures).
- Inspection on August 4-29, (80-15): Routine monthly resident inspection program activities including: operational safety; maintenance; surveillance; reportable events; IE Bulletins and Circulars; plant trip; current regulatory items; and followup on previously identified items. The inspection involved 223 inspector-hours onsite by two NRC inspectors including 38 inspector-hours onsite during off-shifts. Of the eight areas inspected, no items of noncompliance were identified in seven areas. Two items of noncompliance (plant operation with two inoperable safety-related snubbers and reporting requirements not met) were identified in the remaining one area.

TECHNICAL SPECIFICATION 6.8.1 STATES THAT WRITTEN PROCEDURES AND ADMINISTRATIVE POLICIES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED THAT MEET OR EXCEED THE REQUIREMENTS AND RECOMMENDATIONS OF APPENDIX A OF USNRC REGULATORY GUIDE 1.33, REVISION I, QUALITY ASSURANCE PROGRAM REQUIREMENTS (OPERATION). APPENDIX A OF THAT GUIDE STATES THAT RADIATION PROTECTION PROCEDURES SHOULD BE WRITTEN, INCLUDING PROCEDURES FOR ACCESS CONTROL TO RADIATION AREAS. STATION RADIATION PROTECTION PROCEDURE, S-VII-1.5, "ACCESS TO CONTROLLED AND EXCLUSION AREAS," STATES THAT RADIATION EXPOSURE PERMITS PROVIDE SPECIFIC RADIATION SAFETY INSTRUCTIONS FOR WORK IN EXCLUSION AREAS. ON JULY 20, 1980, THE INSPECTOR OBSERVED THAT ALL RADIATION EXPOSURE PERMITS IN EFFECT FOR WORK INSIDE THE UNIT I CONTAINMENT BUILDING REQUIRED "GLOVES" AS AN ARTICLE OF PROTECTIVE CLOTHING. CONTRARY TO THE REQUIREMENTS, ON JULY 20, 1980 THE INSPECTOR OBSERVED THAT ONE TECHNICIAN WAS AT WORK ON THE "A" STEAM GENERATOR PLATFORM WITHOUT GLOVES ON SEVERAL OCCASIONS.

TECHNICAL SPECIFICATION 6.8.1 STATES THAT WRITTEN PROCEDURES AND ADMINISTRATIVE POLICIES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED THAT MEET OR EXCEED THE REQUIREMENTS AND RECOMMENDATIONS OF APPENDIX A OF USNRC REGULATORY GUIDE 1.33, REVISION I, QUALITY ASSURANCE PROGRAM REQUIREMENTS (OPERATION). APPENDIX A OF THAT GUIDE STATES THAT RADIATION PROTECTION PROCEDURES SHALL BE WRITTEN, INCLUDING PROCEDURES FOR ACCESS CONTROL TO RADIATION AREAS. STATION RADIATION PROTECTION PROCEDURE, S-VII-1.5, "ACCESS TO CONTROLLED AND EXCLUSION AREAS," STATES THAT EACH PERSON ENTERING AN EXCLUSION AREA MUST WEAR A POCKET DOSIMETER, A LAB COAT OR OTHER PROTECTIVE CLOTHING, AND BE LISTED ON A RADIATION EXPOSURE PERMIT, IN GENERAL. CONTRARY TO THE REQUIREMENTS, ON JULY 21, 1980 THE INSPECTOR OBSERVED THREE LICENSEE PERSONNEL WORKING IN AN EXCLUSION AREA WHO COLLECTIVELY FAILED TO MEET THE APPLICABLE ABOVE CITED REQUIREMENTS OF PROCEDURE S-VII-1.5.
(8021 INFRACTION)

10 CFR 20.101, "RADIATION DOSE STANDARDS FOR INDIVIDUALS IN RESTRICTED AREAS," PARAGRAPH (B) STATES, "A LICENSEE MAY PERMIT AN INDIVIDUAL IN A RESTRICTED AREA TO RECEIVE A TOTAL OCCUPATIONAL DOSE TO THE WHOLE BODY GREATER THAN THAT PERMITTED UNDER PARAGRAPH (A) OF THIS SECTION, PROVIDED: (1) DURING ANY CALENDAR QUARTER THE TOTAL OCCUPATIONAL DOSE TO THE WHOLE BODY SHALL NOT EXCEED 3 REMS..." CONTRARY TO THE REQUIREMENTS, A CONTRACTOR EMPLOYED INDIVIDUAL WHOSE ACCUMULATED OCCUPATIONAL EXPOSURE HISTORY WAS ON FILE, RECEIVED AN EXPOSURE OF 3.5 REMS DURING THE SECOND CALENDAR QUARTER OF 1980.
(8022 INFRACTION)

WHEN APPROPRIATE, SUCH EVALUATION INCLUDES A PHYSICAL SURVEY OF THE LOCATION OF MATERIALS AND EQUIPMENT, AND MEASUREMENTS OF LEVELS OF RADIATION OR CONCENTRATIONS OF RADIOACTIVE MATERIAL PRESENT." CONTRARY TO THE REQUIREMENTS, EVALUATIONS OF THE RADIATION DOSE RECEIVED BY AN INDIVIDUAL DURING THE SECOND CALENDAR QUARTER OF 1980 WERE NOT ADEQUATE TO ASSURE COMPLIANCE WITH 10 CFR 20.101(B) IN THAT A CONTRACTOR EMPLOYED INDIVIDUAL RECEIVED A DOSE OF 3.5 REM.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY SECTION 6.8.1 OF APPENDIX A TO OPERATING LICENSE DPR-77, CRITERION XIV OF 10 CFR 50, APPENDIX B AND AI-9, MEASURES SHALL BE ESTABLISHED FOR INDICATING THE OPERATING STATUS OF STRUCTURES, SYSTEMS AND COMPONENTS OF THE NUCLEAR POWER PLANT. CONTRARY TO THE ABOVE, ON JUNE 25, 1980 THE ICE CONDENSER INLET DOORS WERE BLOCKED SHUT IN ORDER TO ALLOW COLD AIR TO BUILD UP BEHIND THE DOORS TO HOLD THEM SHUT PROPERLY. THIS TEMPORARY ALTERATION OF A CRITICAL SYSTEM, DESIGNATED AS OPERABLE, WAS DONE WITHOUT THE USE OF A TEMPORARY ALTERATION CONTROL FORM OR TEMPORARY ALTERATION ORDER.
(8025 DEFICIENCY)

AS REQUIRED BY 10 CFR 73.55(D)(7), "THE LICENSEE SHALL POSITIVELY CONTROL ALL POINTS OF PERSONNEL ACCESS INTO VITAL AREAS...." IN ADDITION, SECTION 5.2.1 OF THE SEQUOYAH PHYSICAL SECURITY PLAN (PSP) STATES THAT "ALL VITAL AREA BARRIERS WILL BE RESISTANT TO PENETRATION. THE PENETRATION RESISTANCE OF THE BARRIERS WILL NOT BE DIMINISHED BY DOORS, WINDOWS AND OTHER OPENINGS IN THE BARRIERS." CONTRARY TO THE ABOVE, (A) ON JUNE 23, 1980 A VITAL AREA DOOR WAS REMOVED FROM ITS HINGES FOR MAINTENANCE WITHOUT ADEQUATE COMPENSATORY MEASURES BEING PROVIDED TO CONTROL ACCESS INTO THE VITAL AREA. (B) ON JUNE, 1980 A PROTECTIVE GRATING WAS REMOVED FROM A VITAL AREA BARRIER OPENING TO PROVIDE ACCESS TO THE AREA FOR MAINTENANCE PERSONNEL WITHOUT ADEQUATE COMPENSATORY MEASURES BEING PROVIDED TO CONTROL ACCESS INTO THE VITAL AREA. THIS IS AN INFRACTION. A SIMILAR ITEM WAS BROUGHT TO YOUR ATTENTION IN OUR LETTERS DATED JUNE 2, 1980 AND JUNE 26, 1980.
(8025 INFRACTION)

FAILURE TO FOLLOW PROCEDURE SQA-44 IN THAT, DURING PERFORMANCE OF TEST SU-7.6 (PSEUDO EJECTION OF ROD) INACCURATE RESULTS WERE RECOGNIZED BUT NO TEST DEFICIENCY WAS DOCUMENTED.
(8031 INFRACTION)

CONTRARY TO THE REQUIREMENTS OF THE PHYSICAL SECURITY PLAN, PROCEDURE PHYSI-13, TWO INDIVIDUALS WERE ASSIGNED TO THE OPERATIONS FIRE BRIGADE ON AUGUST 15, 18 AND 19 WHO HAD NOT RECEIVED REQUALIFICATION TRAINING SINCE JANUARY 1979.

ENFORCEMENT STATUS

AS REQUIRED BY 10CFR50.72(A)(3), LICENSEES ARE REQUIRED TO NOTIFY THE NRC OPERATIONS CENTER AS SOON AS POSSIBLE AND IN ALL CASES WITHIN ONE HOUR OF ANY EVENT THAT RESULTS IN A NUCLEAR POWER PLANT NOT BEING IN A CONTROLLED OR EXPECTED CONDITION WHILE OPERATING OR SHUT DOWN. CONTRARY TO THE ABOVE, ON JUNE 11, 1980, DURING A NATURAL CIRCULATION COOLDOWN: (A) ST. LUCIE UNIT NO. 1 FORMED A STEAM BUBBLE IN THE REACTOR HEAD AREA; (B) INDICATIONS OF THIS PHENOMENON BEGAN TO BE SEEN ABOUT 6:3[illegible] A.M. AND CONTINUED THROUGHOUT THE MORNING; (C) THE PLANT OPERATORS RECOGNIZED THAT THE PLANT WAS NOT IN AN EXPECTED CONDITION BY ABOUT 8:00 A.M. AND (D) THE NRC OPERATIONS CENTER WAS NOT NOTIFIED UNTIL AFTER 11:00 A.M.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY CRITERION V OF APPENDIX B TO 10 CFR 50, AS IMPLEMENTED BY VIRGINIA ELECTRIC AND POWER COMPANY TOPICAL REPORT VEP-1-3A, "QUALITY ASSURANCE PROGRAM - OPERATIONS PHASE," SECTION 17.2.5, "ACTIVITIES AFFECTING QUALITY SHALL BE PRESCRIBED BY DOCUMENTED INSTRUCTIONS, PROCEDURES, ...". IE BULLETIN 79-14, "SEISMIC ANALYSIS FOR AS-BUILT SAFETY RELATED PIPING SYSTEMS," SPECIFIES THAT THE LICENSEE SHOULD ASSURE THAT HE IS PROMPTLY NOTIFIED WHEN THE ARCHITECT/ENGINEER IDENTIFIES A NONCONFORMANCE AND THAT THE SIGNIFICANCE OF NONCONFORMANCES WITH RESPECT TO SYSTEM OPERABILITY BE EVALUATED BY ENGINEERING JUDGEMENT WITHIN TWO DAYS OF IDENTIFICATION AND BY ANALYSIS WITHIN 30 DAYS OF IDENTIFICATION. CONTRARY TO THE ABOVE, PROCEDURES ISSUED TO ACCOMPLISH IE BULLETIN 79-14 DO NOT PROPERLY ADDRESS THE TIMELY EVALUATION AND ANALYSIS OF IDENTIFIED NONCONFORMANCES OR THE PROMPT NOTIFICATION OF VEPCO OF THESE ITEMS. STRESS PROBLEM 3033 ILLUSTRATES THE RESULTS OF THESE INADEQUATE PROCEDURES IN THAT SIGNIFICANT OVERSTRESSES IDENTIFIED BY THE INITIAL ANALYSIS ON DECEMBER 1, 1979 WERE NOT EXAMINED BY AN INDEPENDENT REVIEWER UNTIL FEBRUARY 1, 1980. ON THAT DATE VEPCO SHUT THE UNIT DOWN DUE TO CONTAINMENT INTEGRITY QUESTIONS RESULTING FROM THIS PROBLEM. (8031 INFRACTION)

NPF-1 STATES IN SECTION 2.C(7) THAT, EXCEPT FOR THE INSTALLATION OF PIPE SUPPORTS, "...ALL ACTIVITIES TO WHICH A QUALITY ASSURANCE PROGRAM IS APPLICABLE SHALL, AFTER THE DATE OF ISSUE OF THIS LICENSE, BE CONDUCTED IN ACCORDANCE WITH THE QUALITY ASSURANCE PROGRAM FOR OPERATION." QUALITY ASSURANCE PROCEDURE QAP-5, "PROCEDURES, INSTRUCTIONS AND DRAWINGS," STATES IN SECTION II.A THAT "ACTIVITIES AFFECTING QUALITY SHALL BE ACCOMPLISHED IN ACCORDANCE WITH CURRENT PLANT PROCEDURES OR INSTRUCTIONS INCLUDING BUT NOT LIMITED TO APPROVED PLANT OPERATING MANUAL PROCEDURES, TEMPORARY PROCEDURES, MAINTENANCE REQUEST SPECIAL INSTRUCTIONS AND LOWER TIER PROCEDURES." THE PROCEDURE FOR STEAM GENERATOR CHANNEL HEAD DECONTAMINATION (PLANT PROCEDURE MP-T-7) REQUIRES IN STEP NO. 7.4 THAT REACTOR COOLANT SYSTEM (RCS) BORON SAMPLES BE TAKEN AT LEAST EVERY FOUR HOURS OF SPRAY FLOW OPERATION. CONTRARY TO THE REQUIREMENTS, CHEMISTRY LOGS EXAMINED BY THE INSPECTOR SHOWED THAT NO RCS BORON SAMPLES WERE TAKEN BETWEEN 0030 ON MAY 28 AND 0035 ON MAY 29, 1980, DURING WHICH PERIOD SEVERAL HOURS OF SPRAY FLOW DECONTAMINATION TOOK PLACE, WITH THE RESULT THAT RCS BORON CONCENTRATION WAS FOUND TO BE LESS THAN THE MINIMUM OF 2000 PPM REQUIRED BY TECHNICAL SPECIFICATIONS.

REACTOR-YEARS OF EXPERIENCE

09/30/80

The total of Reactor years of experience is as the sum of all calendar days for each unit, from the date that electricity was first generated until a final shutdown date or the status date, whichever comes first, divided by 365.25 days/year.

If a date is unknown, the first day of the first month of operation is substituted. Units which have not yet generated electricity but which are licensed are listed but not included in the computation.

OPERATING UNITS STATUS REPORT

NOVEMBER 1980

DATA AS OF 10/31/80

LICENSED OPERATING REACTORS

AUTHORIZATION AND CLEARANCE

THE U.S. NUCLEAR REGULATORY COMMISSION'S OFFICE OF MANAGEMENT AND PROGRAM ANALYSIS PUBLISHES THIS MONTHLY STATUS REPORT "AS PART OF THE REPORTING REQUIREMENTS IN SECTION 50.36 OF 10 CFR PART 50 UNDER GAO CLEARANCE NUMBER B-180225, WITH AN EXPIRATION DATE OF SEPTEMBER 30, 1981," AS STATED IN THE OCTOBER 3, 1978 LETTER FROM JOHN M. LOVELADY, ASSISTANT DIRECTOR, GENERAL GOVERNMENT DIVISION, U. S. GENERAL ACCOUNTING OFFICE, TO J.M. FELTON, DIRECTOR, DIVISION OF RULES AND RECORDS, U.S. NUCLEAR REGULATORY COMMISSION.

STATEMENT OF PURPOSE

The U. S. Nuclear Regulatory Commission's monthly OPERATING UNITS STATUS REPORT — LICENSED OPERATING REACTORS, provides data on the operation of nuclear units as timely and accurately as possible. This information is collected by the Office of Management and Program Analysis from the Headquarters Staff of NRC's Office of Inspection and Enforcement, from NRC's Regional Offices, and from utilities. Since all of the data concerning operation of the units is provided by the utility operators less than two weeks after the end of the month, necessary corrections to published information are shown on the ERRATA page.

This report is divided into three sections: the first contains monthly highlights and statistics for commercial operating units, and errata from previously reported data; the second is a compilation of detailed information on each unit, provided by NRC Regional Offices, IE Headquarters and the Utilities; and the third section is an appendix for miscellaneous information such as spent fuel storage capability, reactor-years of experience and non-power reactors in the United States.

The percentage computations, Items 19 through 24 in Section 2, the vendor capacity factors on page 1-4, and actual vs. potential energy production on Page 1-2 are computed from actual power production from the period of consideration. The percentages listed in power generation on Page 1-2 are computed as an arithmetical average. The factors for the life-span of each unit (the "Cumulative" column) are reported by the utility and are not entirely re-computed by NRC. Utility power production data is checked for consistency with previously submitted statistics.

In some cases, the numbers in the "Cumulative" column may have been totaled from a date that is different from the date of commercial operation. In these cases, the column is noted with an explanation of the nature of the change on each individual plant page in Section 2.

It is hoped this status report proves informative and helpful to all agencies and individuals interested in analyzing trends in the nuclear industry which might have safety implications, or in maintaining an awareness of the U. S. energy situation as a whole.

GLOSSARY

AVERAGE DAILY POWER LEVEL (MWe)	The net electrical energy generated during the day (measured from 0001 to 2400 hours inclusive) in megawatts hours divided by 24 hours.
LICENSED THERMAL POWER (MWt)	The maximum thermal power of the reactor authorized by the NRC, expressed in megawatts.
DATE OF COMMERCIAL OPERATION	Date unit was declared by utility owner to be available for the regular production of electricity; usually related to satisfactory completion of qualification tests as specified in the purchase contract and to accounting policies and practices of utility.
DESIGN ELECTRICAL RATING (DER) (Net MWe)	The nominal net electrical output of the unit specified by the utility and used for the purpose of plant design.
FORCED OUTAGE	An outage required to be initiated no later than the weekend following discovery of an off-normal condition.
FORCED OUTAGE HOURS	The clock hours during the report period that a unit is unavailable due to forced outages.
GROSS ELECTRICAL ENERGY GENERATED (MWH)	Electrical output of the unit during the report period as measured at the output terminals of the turbine generator, in megawatts hours.
GROSS HOURS	The clock hours from the beginning of a specified situation until its end. For outage durations, the clock hours during which the unit is not in power production.
GROSS THERMAL ENERGY GENERATED (MWH)	The thermal energy produced by the unit during the report period as measured or computed by the licensee in megawatt hours.
HOURS GENERATOR ON-LINE	Also, "Unit Service Hours." The total clock hours in the report period during which the unit operated with breakers closed to the station bus. These hours added to the total outage hours experienced by the unit during the report period, shall equal the hours in the report period.
HOURS IN REPORTING PERIOD	For units in power ascension at the end of the period, the gross hours from the beginning of the period or the first electrical production, whichever comes last, to the end of the period. For units in commercial operation at the end of the period, the gross hours from the beginning of the period or of commercial operation, whichever comes last, to the end of the period or decommissioning, whichever comes first.
HOURS REACTOR CRITICAL	The total clock hours in the report period during which the reactor sustained a controlled chain reaction.
MAXIMUM DEPENDABLE CAPACITY (GROSS) (MDC Gross) (Gross MWe)	Dependable main-unit gross capacity, winter or summer, whichever is smaller. The dependable capacity varies because the unit efficiency varies during the year due to cooling water temperature variations. It is the gross electrical output as measured at the output terminals of the turbine generator during the most restrictive seasonal conditions (usually summer).
MAXIMUM DEPENDABLE CAPACITY (NET) (MDC Net) (Net MWe)	Maximum Dependable Capacity (Gross) less the normal station service loads.
NAMEPLATE RATING (Gross MWe)	The nameplate power designation of the generator in megavolt amperes (MVA) times the nameplate power factor of the generator. NOTE: The nameplate rating of the generator may not be indicative of the maximum or dependable capacity, since some other item of equipment of a lesser rating (e.g., turbine) may limit unit output.
NET ELECTRICAL ENERGY GENERATED	Gross electrical output of the unit measured at the output terminals of the turbine generator during the reporting period, minus the normal station service electrical energy utilization. If this quantity is less than zero, a negative number should be recorded.
OUTAGE	A situation in which no electrical production takes place.
OUTAGE DATE	As reported on Appendix D of Reg. Guide 1.16, the date of the start of the outage. If continued from a previous month, report the same outage date but change "Method of Shutting Down Reactor" to "4 (Other)" and add a note: "Continued from previous month."
OUTAGE DURATION	The total clock hours of the outage measured from the beginning of the report period or the outage, whichever comes last, to the end of the report period or the outage, whichever comes first.
OUTAGE NUMBER	A number unique to the outage assigned by the licensee. The same number is reported each month in which the outage is in progress. One format is "76-05" for the fifth outage to occur in 1976.
PERIOD HOURS	See "Hours in Reporting Period."
POWER REDUCTION	A reduction in the Average Daily Power Level of more than 20% from the previous day. All power reductions are defined as outage of zero hours durations for the purpose of computing unit service and availability factors, and forced outage rate.

REACTOR AVAILABLE HOURS	The total clock hours in the report period during which the reactor was critical or was capable of being made critical. (Reactor Reserve Shutdown Hours + Hours Reactor Critical.)
REACTOR AVAILABILITY FACTOR	$\frac{\text{Reactor Available Hours} \times 100}{\text{Period Hours}}$
REACTOR RESERVE SHUTDOWN	The cessation of criticality in the reactor for administrative or other similar reasons when operation could have been continued.
REACTOR RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the reactor is in reserve shutdown mode. NOTE: No credit is given for NRC imposed shutdowns.
REACTOR SERVICE FACTOR	$\frac{\text{Hours Reactor Critical} \times 100}{\text{Period Hours}}$
REPORT PERIOD	Usually, the preceding calendar month. Can also be the preceding calendar year, (Year-to-Date), or the life-span of a unit (cumulative).
RESTRICTED POWER LEVEL	Maximum net electrical generation to which the unit is restricted during the report period due to the state of equipment, external conditions, administrative reasons, or a direction by NRC.
SCHEDULED OUTAGE	Planned removal of a unit from service for refueling, inspection, training, or maintenance. Those outages which do not fit the definition of "Forced Outage" perforce are "Scheduled Outages."
STARTUP AND POWER ASCENSION TEST PHASE	Period following initial criticality during which the unit is tested at successively higher levels, culminating with operation at full power for a sustained period and completion of warranty runs. Following this phase, the utility generally considers the unit to be available for commercial operation.
UNIT	The set of equipment uniquely associated with the reactor, including turbine generators, and ancillary equipment, considered as a single electrical energy production facility.
UNIT AVAILABLE HOURS	The total clock hours in the report period during which the unit operated on-line or was capable of such operation. (Unit Reserve Shutdown Hours + Hours Generator On-Line.)
UNIT AVAILABILITY FACTOR*	$\frac{\text{Unit Available Hours} \times 100}{\text{Period Hours}}$
UNIT CAPACITY FACTORS	
– Using Licensed Thermal Power	$\frac{\text{Gross Thermal Energy Generated} \times 100}{\text{Period Hours} \times \text{Lic. Thermal Power}}$
– Using Nameplate Rating	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{Nameplate Rating}}$
– Using DER	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{DER}}$
– Using MDC Gross	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Gross}}$
– Using MDC Net	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Net}}$

NOTE: if MDC Gross and/or MDC Net have not been determined, the DER is substituted for this quantity for Unit Capacity Factor calculations.

UNIT FORCED OUTAGE RATE	$\frac{\text{Forced Outage Hours}}{\text{Unit Service Hours} + \text{Forced Outage Hours}}$
UNIT RESERVE SHUTDOWN	The removal of the unit from on-line operation for economic or other similar reasons when operation could have been continued.

UNIT SERVICE FACTOR	$\frac{\text{Unit Service Hours} \times 100}{\text{Period Hours}}$
UNIT SERVICE HOURS	See "Hours Generator On-Line."

Capacity factor in this page, denoted as CFMDC, is a function of the net maximum dependable capacity. See the corresponding definition in the Glossary. The vendor averages are computed by the formula :

$$\frac{\text{Net Electrical Energy Produced by Vendor}}{\text{Potential Electrical Production By Vendor In This Month.}} \times 100\%$$

AVERAGE DAILY POWER LEVEL FOR ALL COMMERCIALLY OPERATING UNITS

This chart depicts the average daily power level for the units in commercial operation during the month.

The straight line on the graph labelled "SUM OF MAX. DEPEND. CAP." is plotted at the value shown by summing the separate maximum dependable capacities of the commercially operating units (in Net MWe). The plot shown below the line is calculated by summing the separate average daily power levels of the commercially operating units for each day of the month.

The scale on the left vertical axis runs in 1,000 MWe increments from 0 to 55,000 MWe (Net). The right vertical axis shows the percentage in 10% increments, up to 100% of the "SUM OF MAX. DEPEND. CAP."

It should be recognized that the 100% line would be obtainable only if all of the commercially operating units operated at 100% capacity, 24 hours per day, for the entire month. In other words, since any power generator must occasionally shut down to refuel and/or perform needed maintenance, and also since 100% capacity production is not always required by power demands, the 100% line is a theoretical goal and not a practical one.

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 3.11.B.4 REQUIRES IN PART THAT A CONTINUOUS FIRE WATCH SHALL BE ESTABLISHED IMMEDIATELY IF CO2 FIRE PROTECTION IS LOST TO A CABLE SPREADING ROOM. CONTRARY TO THE ABOVE, ON AUGUST 5, 1980 FROM APPROXIMATELY 11:00 A.M. TO 11:45 A.M. A CONTINUOUS FIRE WATCH WAS NOT PROVIDED FOR THE CABLE SPREADING ROOMS WHILE THE CO2 SYSTEM WAS INOPERABLE FOR REPAIRS.
(8027 INFRACTION)

TENNESSEE VALLEY AUTHORITY'S RESPONSE TO IE BULLETIN 80-17, SUPPLEMENT 1, DATED AUGUST 18, 1980 FOR BROWNS FERRY UNIT 1, 2 AND 3, STATES IN PART, THAT THE UT SENSORS ARE CONTINUOUSLY CONNECTED TO A RECORDER WHICH MONITOR FOR AN ACCUMULATION OF WATER IN THE EAST AND WEST SCRAM DISCHARGE HEADERS. THESE RECORDERS ARE CHECKED AT 30 MINUTE INTERVALS. CONTRARY TO THE ABOVE, ON AUGUST 21, 1980, THE RECORDERS WERE NOT CHECKED FROM 11:30 A.M. TO 12:45 P.M. FOR A TOTAL OF ONE HOUR AND 15 MINUTES.
(8027 DEVIATION)

AS REQUIRED BY CRITERION V OF APPENDIX B TO 10CFR50, AND IMPLEMENTED BY TOPICAL REPORT TVA-TR75-01, PARAGRAPH 17.2.5, "ACTIVITIES AFFECTING QUALITY SHALL BE PRESCRIBED BY DOCUMENTED INSTRUCTIONS, PROCEDURES...AND SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THESE INSTRUCTIONS, PROCEDURES AND DRAWINGS". IX-360 OF SECTION III OF THE ASME BOILER AND PRESSURE VESSEL CODE (1968 EDITION) IS IDENTIFIED BY THE FSAR AS THE APPLICABLE CODE FOR INSERVICE INSPECTION PENETRANT EXAMINATION PROCEDURES. IX-360 REQUIRES THAT PENETRANT EXAMINATION PROCEDURES CONTAIN THE DETAILS OF THE METHOD OF PRE-EXAMINATION CLEANING. PENETRANT EXAMINATION PROCEDURE N-PT-1 REVISION 2 REQUIRES REMOVAL OF PAINT, SLAG AND OTHER MASKING MATERIALS FROM THE SPECIMEN SURFACE PRIOR TO PENETRANT APPLICATION. PENETRANT EXAMINATION PROCEDURE N-PT-1 REVISION 2 REQUIRES THAT ALL WELDS BLEND SMOOTHLY INTO THE PARENT METAL. CONTRARY TO THE ABOVE, ON SEPTEMBER 21, 1980, PENETRANT EXAMINATION PROCEDURE N-PT-1 REVISION 2 DID NOT CONTAIN THE DETAILS OF MECHANICAL PRE-EXAMINATION CLEANING METHODS USED TO PREPARE WELDS FOR INSERVICE INSPECTION PENETRANT EXAMINATIONS. ALSO, THE PROCEDURE DID NOT PRESCRIBE THE DETAILS OF THE METHOD TO BE USED TO REMOVE COUPLANT REMAINING ON A WELD FROM PRIOR ULTRASONIC EXAMINATION (WELD TRHR-2-191). PAINT AND SMALL AMOUNTS OF SLAG AND OTHER MASKING MATERIAL WERE NOT REMOVED FROM THE SURFACE OF WELD TRHR-2-191 PRIOR TO APPLICATION OF PENETRANT IN AN INSERVICE INSPECTION PENETRANT EXAMINATION BEING CONDUCTED IN ACCORDANCE WITH PROCEDURE N-PT-1 REVISION 2. WELD TRHR-2-191 WAS NOT PREPARED TO BLEND SMOOTHLY INTO THE PARENT METAL FOR AN INSERVICE INSPECTION PENETRANT EXAMINATION, CONDUCTED IN ACCORDANCE WITH PROCEDURE N-PT-1 REVISION 2.

THE INSPECTION INVOLVED 226 INSPECTOR-HOURS ONSITE BY FOUR NRC INSPECTORS INCLUDING 48 INSPECTOR-HOURS ONSITE DURING OFF-SHIFTS. OF THE EIGHT AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN SEVEN AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS IDENTIFIED IN THE OTHER AREA (FAILURE TO USE THE LATEST REVISION OF AN APPROVED PROCEDURE).

+ INSPECTION ON SEPTEMBER 9-12, (80-26): INCLUDED A REVIEW OF THE PROTECTED AREA PHYSICAL BARRIERS; VITAL AREA PHYSICAL BARRIERS; ACCESS CONTROL (VITAL AREAS); ACCESS CONTROL (SEARCH) AND LICENSEE ACTION TAKEN ON PREVIOUS INSPECTION/INVESTIGATION FINDINGS. THE INSPECTION INVOLVED 54 INSPECTOR-HOURS ONSITE BY TWO NRC INSPECTORS. THE INSPECTION BEGAN DURING AN OFFSHIFT PERIOD; 16 INSPECTOR-HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE AREAS EXAMINED DURING THIS INSPECTION EXCEPT FOR THE FOLLOWING TWO ITEMS. ACCESS CONTROL (VITAL AREA) - TWO VITAL AREA PORTALS WERE FOUND UNSECURED AND UNATTENDED. THIS IS A REPEAT ITEM OF NONCOMPLIANCE FROM A PREVIOUS SECURITY INSPECTION; AND ACCESS CONTROL (SEARCH) - SEARCHES WERE NOT PERFORMED OF SEVERAL HAND-CARRIED PACKAGES. TWO PREVIOUS ITEMS OF NONCOMPLIANCE, WHICH WERE IDENTIFIED IN IE INSPECTION REPORTS 50-346/80-02 AND 50-346/80-13, REMAIN OPEN. ALL REMAINING ITEMS WERE CLOSED.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 20.105 PROHIBITS POSSESSION, USE, OR TRANSFER OF LICENSED MATERIAL IN A MANNER THAT WOULD CREATE IN AN UNRESTRICTED AREA THE POTENTIAL FOR AN INDIVIDUAL TO RECEIVE A DOSE GREATER THAN TWO MILLIREMS IN ONE HOUR OR GREATER THAN 100 MILLIREMS IN SEVEN CONSECUTIVE DAYS. CONTRARY TO THE ABOVE, THE LICENSEE FOUND IN THE SCRAPYARD, AN UNRESTRICTED AREA, MATERIAL THAT PRODUCED AN EXPOSURE RATE OF APPROXIMATELY 10 MR PER HOUR AT A DISTANCE OF THREE FEET.
(8013 INFRACTION)

10 CFR 20.203(C)(2) LISTS THREE ALTERNATIVE REQUIREMENTS FOR CONTROL OF ACCESS TO HIGH RADIATION AREAS. CONTRARY TO THESE REQUIREMENTS, ON JUNE 21, 1980, THE BARRICADE OF THE ENTRY TO A HIGH RADIATION AREA AT THE UNIT 2 WEST CRD ACCUMULATOR BANK WAS NOT SECURED, LOCKED, EQUIPPED WITH AN AUDIBLE ALARM SYSTEM, OR EQUIPPED WITH A CONTROL DEVICE TO REDUCE THE RADIATION LEVEL.
(8013 INFRACTION)

TECHNICAL SPECIFICATION 6.2.B REQUIRES THAT RADIATION CONTROL PROCEDURES BE MAINTAINED, MADE AVAILABLE TO ALL PERSONNEL, AND ADHERED TO. THE DOCUMENT "DRESDEN NUCLEAR STATION RADIATION CONTROL STANDARDS" IS TO PROCEDURE THAT ESTABLISHED CONTROL OVER PERSONAL RADIATION EXPOSURES. THE FOLLOWING EXAMPLES OF FAILURE TO FOLLOW THIS PROCEDURE WERE IDENTIFIED DURING THE APPRAISAL. CONTRARY TO THE ABOVE REQUIREMENTS: (A) LAUNDERED PROTECTIVE CLOTHING IN THE CLEAN LAUNDRY STORAGE BINS IN THE UNIT 1 TRACK WAY WAS FOUND READING TO 22,000 COUNTS PER MINUTE (CPM) IN CONTRAST TO THE "STANDARDS" LIMIT OF 3,000 CPM; AND (B) MATERIAL READING 10 MR PER HOUR AT THREE FEET WAS FOUND IN THE SCRAP YARD IN CONTRAST TO THE "STANDARDS" UNCONDITIONAL RELEASE LIMIT OF 100 CPM.
(8013 INFRACTION)

TECHNICAL SPECIFICATION 6.2.B STATES, "RADIATION CONTROL PROCEDURES SHALL BE MAINTAINED, MADE AVAILABLE TO ALL STATION PERSONNEL AND ADHERED TO. THESE PROCEDURES SHALL SHOW PERMISSIBLE RADIATION EXPOSURE AND SHALL BE CONSISTENT WITH THE REQUIREMENTS OF 10 CFR 20. THIS RADIATION PROTECTION PROGRAM SHALL BE ORGANIZED TO MEET THE REQUIREMENTS OF 10 CFR 20." THE DRESDEN RADIATION PROTECTION MANUAL STATES IN PART, "WHEN RADIATION WORK INVOLVED RAISING RADIOACTIVE MATERIALS IN THE POOLS ABOVE ESTABLISHED RADIATION LEVELS, UNCOVERING CONTAMINATED MATERIALS, VALVING OR OPENING PROCESS LINES, OR DISASSEMBLING RADIOACTIVE EQUIPMENT, RADIATION PROTECTION SHALL BE INFORMED BEFORE THE FACT SO THAT A PROPER EVALUATION OF THE RADIOLOGICAL CONSEQUENCES MAY BE MADE." CONTRARY TO THE ABOVE, ON AUGUST 12, 1980, THE RESIDENT INSPECTORS OBSERVED SEVERAL LICENSEE PERSONNEL WORKING ON A CONTAMINATED CRD PUMP WITHOUT WEARING ADEQUATE PROTECTIVE CLOTHING AND WITHOUT THE WORK AREA BEING PROPERLY POSTED. ADDITIONALLY, THE INSPECTORS DETERMINED THAT RADIATION PROTECTION HAD NOT BEEN NOTIFIED TO PERFORM AN EVALUATION OF THE RADIOLOGICAL CONSEQUENCES ASSOCIATED WITH THIS JOB. FURTHER REVIEW BY THE INSPECTORS DISCLOSED THAT THE DRESDEN OUTAGE OR WORK REQUEST FORMS DO NOT CONTAIN A REQUIREMENT FOR WORKERS TO OBTAIN RADIATION PROTECTION CONCURRENCE, WHEN REQUIRED, FOR A SPECIFIC JOB.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR PART 50, APPENDIX B, CRITERION V STATES IN PART, "ACTIVITIES THAT AFFECT QUALITY SHALL BE PRESCRIBED BY DOCUMENTED INSTRUCTIONS, PROCEDURES..." THE DAEC "QUALITY ASSURANCE PROGRAM BOUNDARY," QAP 1301.4, 5.2 COMMITS THE QA PROGRAM TO MEET THE REQUIREMENTS OF SAFETY GUIDE 33. SAFETY GUIDE 33 INCLUDES THE REACTOR CLEANUP SYSTEM OPERATION IN THE LIST OF SAFETY RELATED ACTIVITIES REQUIRING PROCEDURES. CONTRARY TO THE ABOVE, DURING NORMAL PLANT OPERATIONS, THE REACTOR WATER CLEANUP SYSTEM WAS OPERATED IN AN OFF NORMAL CONDITION FROM AUGUST 2, 1980 TO AUGUST 7, 1980 WITHOUT APPROVED PROCEDURES. OPERATION IN THE OFF NORMAL CONDITION WITH NO RETURN FLOW TO THE REGENERATIVE HEAT EXCHANGER, ATTRIBUTED TO 14 PRIMARY CONTAINMENT GROUP FIVE ACTUATIONS DUE TO THE ELEVATED TEMPERATURES IN THE REACTOR WATER CLEANUP SYSTEM ROOM.
(8013 DEFICIENCY)

TECHNICAL SPECIFICATIONS SECTION 4.7.A.2.D.3 STATES "TYPE C TESTS SHALL BE PERFORMED DURING EACH REACTOR SHUTDOWN FOR MAJOR REFUELING OR OTHER CONVENIENT INTERVAL BUT IN NO CASE AT INTERVALS GREATER THAN TWO YEARS." CONTRARY TO THE ABOVE, THE HPCI/RCIC EXHAUST VACUUM BREAKERS LISTED IN TECHNICAL SPECIFICATION TABLE 3.7.2, WERE NOT TESTED FROM INITIAL INSTALLATION IN JUNE 1974 TO MARCH 1980 THEREBY EXCEEDING THE TWO YEAR INTERVAL.
(8013 INFRACTION)

CONTRARY TO PARAGRAPH 1.4.1 OF THE APPROVED SECURITY PLAN, SIX WATCHMEN WERE NOT ADEQUATELY SCREENED PRIOR TO BEING GRANTED UNESCORTED ACCESS TO THE PROTECTED AREA.

ENFORCEMENT STATUS

A CHANGE TO THE SECURITY PLAN WAS MADE WITHOUT PRIOR COMMISSION APPROVAL.
(8005 DEFICIENCY)

AT TIMES, THE MINIMUM REQUIRED ILLUMINATION LEVEL WAS NOT MAINTAINED.
(8005 INFRACTION)

THE BADGE(S) USED FOR ACCESS CONTROL PURPOSES WAS NOT AS DESCRIBED IN THE SECURITY PLAN.
(8005 DEFICIENCY)

AN EMERGENCY POWER SOURCE FOR SECURITY EQUIPMENT, AS DESCRIBED IN THE SECURITY PLAN, WAS NOT OPERATIONAL.
(8005 INFRACTION)

THE SECONDARY ALARM STATION WAS NOT PROPERLY MANNED.
(8005 INFRACTION)

THE INTRUSION DETECTION SYSTEM DID NOT MEET SECURITY PLAN COMMITMENTS.
(8005 INFRACTION)

PREOPERATIONAL TEST PROCEDURES FOR SOME SECURITY SYSTEMS HAD NOT BEEN COMPLETELY ESTABLISHED.
(8005 INFRACTION)

COMPENSATORY MEASURES EMPLOYED DID NOT MEET SECURITY PLAN COMMITMENTS.
(8005 INFRACTION)

10 CFR SECTION 50.72 REQUIRES, IN PART, LICENSEES OF NUCLEAR POWER REACTORS LICENSED UNDER SECTION 50.21 OR SECTION 50.32 TO NOTIFY THE NRC OPERATIONS CENTER AS SOON AS POSSIBLE AND IN ALL CASES WITHIN ONE HOUR BY TELEPHONE OF ANY EVENT RESULTING IN AUTOMATIC ACTUATION OF THE REACTOR PROTECTION SYSTEM. CONTRARY TO THE ABOVE REQUIREMENT, AT 2:44 P.M. ON AUGUST 22, 1980, THE PLANT EXPERIENCED A REACTOR TRIP, DURING STARTUP AT LOW POWER, DUE TO A LOSS OF FEEDWATER TO THE FORCED CIRCULATING PUMP SCALE. THIS EVENT WAS NOT REPORTED WITHIN THE ONE HOUR TIME LIMIT STATED ABOVE.
(8009 DEFICIENCY)

SECTION 50.59 OF THE CODE OF FEDERAL REGULATIONS REQUIRES THAT, PRIOR TO MAKING CHANGES TO SAFETY RELATED SYSTEMS, THE LICENSE HOLDER MUST PERFORM A SAFETY EVALUATION TO ASSURE THAT THE PROPOSED CHANGE DOES NOT CONSTITUTE AN UNREVIEWED SAFETY QUESTION. TECHNICAL SPECIFICATIONS (TS) 3.5.1.6 AND 3.5.1.7 REQUIRE THE OPERATIONS REVIEW COMMITTEE (ORC) TO REVIEW ALL PROPOSED CHANGES OR MODIFICATIONS TO PLANT SYSTEMS OR EQUIPMENT THAT AFFECTS NUCLEAR SAFETY AND RECOMMEND TO THE PLANT SUPERINTENDENT IN WRITING APPROVAL OR DISAPPROVAL OF THE PROPOSED CHANGE OR MODIFICATION. THIS REVIEW SHALL INCLUDE A DETERMINATION IN WRITING AS TO WHETHER OR NOT THE CHANGE OR MODIFICATION CONSTITUTES AN UNREVIEWED SAFETY QUESTION. CONTRARY TO THE ABOVE, A CHANGE DISCOVERED BY THE RESIDENT INSPECTORS ON JULY 23, 1980, WAS MADE TO THE SHUTDOWN CONDENSER SYSTEM SOMETIME BETWEEN SEPTEMBER 1971 AND JULY 1975 WITHOUT THE PERFORMANCE OF A SAFETY EVALUATION OR A REVIEW BY THE ORC. ADDITIONALLY, ANOTHER FACILITY CHANGE WAS MADE ON JULY 23, 1980 WITHOUT THE PERFORMANCE OF A SAFETY EVALUATION OR REVIEW BY THE ORC WHEN THE ABOVE UNAPPROVED MODIFICATION WAS REMOVED.
(8009 INFRACTION)

TECHNICAL SPECIFICATION 4.2.1.1 REQUIRES THAT CONTAINMENT INTEGRITY TO BE MAINTAINED WHENEVER THE REACTOR IS OPERATING AT POWER. CONTRARY TO THE ABOVE, ON JULY 23, 1980, WITH THE REACTOR AT 85% POWER, CONTAINMENT INTEGRITY WAS VIOLATED FOR APPROXIMATELY ONE MINUTE WHILE AN UNAUTHORIZED MODIFICATION WAS REMOVED FROM THE SHELL SIDE OF THE SHUTDOWN CONDENSER AND REPLACED WITH A PIPE CAP.
(8009 INFRACTION)

TECHNICAL SPECIFICATION 2.1.2.5(1) REQUIRES THAT ANY PIPING SYSTEM THAT IS OPEN TO CONTAINMENT BUILDING ATMOSPHERE AND OUTSIDE ATMOSPHERE SHALL BE PROVIDED WITH TWO VALVES IN SERIES. CONTRARY TO THE ABOVE, AN UNAUTHORIZED MODIFICATION WAS MADE TO THE SHUTDOWN CONDENSER SHELL SIDE VENT, SOMETIME BETWEEN SEPTEMBER 1971 AND JULY 1975, WHICH RESULTED IN A PIPING SYSTEM THAT DID NOT MEET THE REQUIRED TWO VALVE CRITERIA, IN THAT ONLY ONE NORMALLY SHUT VALVE WAS PROVIDED.

ENFORCEMENT STATUS

10 CFR 50 APPENDIX B, CRITERION II STATES IN PART, "ACTIVITIES AFFECTING QUALITY SHALL BE ACCOMPLISHED UNDER SUITABLY CONTROLLED CONDITIONS. CONTROLLED CONDITIONS INCLUDE THE USE OF APPROPRIATE EQUIPMENT....THE PROGRAM SHALL TAKE INTO ACCOUNT THE NEED FOR SPECIAL CONTROLS...." CONTRARY TO THE ABOVE, A TEMPORARY WASTE WATER PROCESSING DEMINERALIZER WAS INSTALLED WITHOUT ADEQUATE PROCESS CONTROLS OR MONITORING DEVICES TO SAFEGUARD AGAINST THE RELEASE OF RADIOACTIVE MATERIALS TO THE ENVIRONMENT. SUBSEQUENTLY DURING SYSTEM OPERATION, THE DEMINERALIZER OVERFLOWED SPILLING APPROXIMATELY 20 GALLONS OF RADIOACTIVELY CONTAMINATED WATER, ABOUT 2 GALLONS OF WHICH FLOWED OUTSIDE THE CONFINES OF THE BUILDING.
(8028 INFRACTION)

PROCEDURE 915.4, "CONTAMINATION CONTROL," STATES IN PART, "PROTECTIVE CLOTHING IS NOT TO BE WORN OUTSIDE THE CONTROLLED AREA...AT EXITS FROM CONTAMINATED AREAS, AN AREA IS DESIGNATED AS THE STEP OFF PAD. THIS AREA...IS CONSIDERED PART OF THE AREA OUTSIDE THE CONTAMINATED AREA. NOTHING CONTAMINATED SHOULD BE PLACED ON THIS AREA." CONTRARY TO THE ABOVE AN INDIVIDUAL WAS OBSERVED REMOVING POTENTIALLY CONTAMINATED PROTECTIVE CLOTHING IN AREA OUTSIDE THE CONTAMINATED AREA CREATING THE POTENTIAL FOR THE SPREAD OF CONTAMINATION TO UNCONTAMINATED AREAS.
(8028 INFRACTION)

FOUR INDIVIDUALS WERE WORKING IN A CONTROLLED CONTAMINATION AREA PERFORMING DECONTAMINATION ACTIVITIES CONSISTING OF SOAP AND WATER WASHING OF EQUIPMENT AND PIPING. THE INDIVIDUALS WERE WEARING PROTECTIVE CLOTHING LESS THAN THE MINIMUM SPECIFIED IN RADIOACTIVE WORK PERMIT NUMBER 127980. THIS IS IN NONCOMPLIANCE WITH PROCEDURE 915.4, "CONTAMINATION CONTROL."

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50.72(A)(6) REQUIRES IN PART, THAT LICENSEES NOTIFY THE NRC OPERATIONS CENTER WITHIN ONE HOUR BY TELEPHONE OF PERSONNEL ERRORS WHICH PREVENT OR COULD PREVENT DURING ACCIDENT CONDITIONS THE FULFILLMENT OF THE SAFETY FUNCTION OF COMPONENTS IMPORTANT TO SAFETY THAT ARE NEEDED TO SHUT DOWN THE REACTOR SAFELY AND MAINTAIN IT IN A SAFE SHUTDOWN CONDITION OR REMOVE RESIDUAL HEAT FOLLOWING REACTOR SHUTDOWN. CONTRARY TO THE ABOVE, CONTAINMENT SUMP ISOLATION VALVE CV 3030 WHICH WAS FOUND MISPOSITIONED DUE TO PERSONNEL ERROR IN THE OPEN POSITION DURING NORMAL OPERATION AT 7:36 A.M. ON JULY 27, 1980, AND WHICH COULD HAVE PREVENTED THE FULFILLMENT OF THE SAFETY FUNCTION OF COMPONENTS IMPORTANT TO SAFETY, WAS NOT REPORTED TO THE NRC UNTIL 29 HOURS AFTER THE VALVE HAD BEEN FOUND OPEN.
(8012 DEFICIENCY)

TECHNICAL SPECIFICATIONS 3.3.1 AND 3.3.2 REQUIRE, DURING POWER OPERATION, THE OPERABILITY OF AT LEAST TWO HIGH PRESSURE AND ONE LOW PRESSURE SAFETY INJECTION PUMPS OR ONE HIGH PRESSURE AND TWO LOW PRESSURE SAFETY INJECTION PUMPS (INCLUDING THOSE VALVES DIRECTLY ASSOCIATED WITH THE PUMPS WHICH ARE REQUIRED TO FUNCTION DURING ACCIDENT CONDITIONS). CONTRARY TO THE ABOVE, THE PLANT OPERATED AT APPROXIMATELY 88% POWER THROUGHOUT THE 36 HOUR INTERVAL FROM 7:36 P.M. ON JULY 25, 1980, TO 7:36 A.M. ON JULY 27, 1980, WITH TWO OF THE THREE HIGH PRESSURE SAFETY INJECTION PUMPS (P-66B AND P-66C) AND ONE OF THE TWO LOW PRESSURE SAFETY INJECTION PUMPS (P-67B) INOPERABLE WITH RESPECT TO THEIR DESIGN FUNCTION DUE TO CONTAINMENT SUMP SUCTION VALVE CV 3030 BEING MISPOSITIONED IN THE OPEN POSITION.
(8012 INFRACTION)

TECHNICAL SPECIFICATION 6.8.1.C REQUIRES WRITTEN PROCEDURES FOR SURVEILLANCE AND TESTING ACTIVITIES ON SAFETY-RELATED EQUIPMENT TO BE IMPLEMENTED. SAFETY-RELATED SURVEILLANCE PROCEDURE QO-2 "RECIRCULATION ACTUATION SYSTEM" HAS, AS A PREREQUISITE, THAT THE PLANT BE IN COLD SHUTDOWN OR REFUELING MODE WHEN THE TEST IS PERFORMED. CONTRARY TO THE ABOVE, ON AUGUST 19, 1980, THE LICENSEE PERFORMED TEST QO-2, WHEN THE PLANT WAS OPERATING AT 88% POWER.
(8012 INFRACTION)

TECHNICAL SPECIFICATION 3.6.1A REQUIRES THAT CONTAINMENT INTEGRITY NOT BE VIOLATED UNLESS THE REACTOR IS IN THE COLD SHUTDOWN CONDITION. CONTRARY TO THE ABOVE, FROM 7:36 P.M. ON JULY 25, 1980 TO 7:36 A.M. ON JULY 27, 1980, THE REACTOR WAS OPERATED IN OTHER THAN THE COLD SHUTDOWN CONDITION WITH CONTAINMENT INTEGRITY VIOLATED. SPECIFICALLY, CONTAINMENT SUMP SUCTION VALVE CV 3030 WAS OPEN AND WOULD HAVE ALLOWED PUMPING A LIMITED QUANTITY OF CONTAMINATED SUMP WATER TO THE SIRW TANK SUBSEQUENT TO A LARGE LOCA.
(8012 INFRACTION)

TECHNICAL SPECIFICATIONS 3.4.3 AND 3.4.4. ALLOW CONTINUED POWER OPERATION FOR 24 HOURS WITH CONTAINMENT SPRAY PUMPS P54B AND P54C (INCLUDING VALVES DIRECTLY ASSOCIATED WITH THE PUMPS WHICH ARE REQUIRED TO FUNCTION DURING ACCIDENT CONDITIONS) SIMULTANEOUSLY INOPERABLE PROVIDED THE EMERGENCY DIESEL GENERATOR (1-2) CONNECTED TO THE OPPOSITE ENGINEERED SAFEGUARDS BUS IS STARTED TO DEMONSTRATE OPERABILITY. IF BOTH PUMPS ARE INOPERABLE AT THE END OF THE 24-HOUR PERIOD, THE REACTOR IS REQUIRED TO BE PLACED IN THE HOT STANDBY CONDITION WITHIN 12 HOURS. CONTRARY TO THE ABOVE, THE PLANT OPERATED AT APPROXIMATELY 88% POWER DURING THE 36-HOUR INTERVAL FROM 7:36 P.M. ON JULY 25, 1980 TO 7:36 A.M. ON JULY 27, 1980, WITH CONTAINMENT SPRAY PUMPS P54B AND P54C INOPERABLE WITH RESPECT TO THEIR DESIGN FUNCTION DUE TO CONTAINMENT SUMP SUCTION VALVE CV 3030 BEING MISPOSITIONED IN THE OPEN POSITION. THE EMERGENCY DIESEL GENERATOR (1-2) CONNECTED TO THE OPPOSITE ENGINEERED SAFEGUARDS BUS WAS NOT STARTED DURING THAT INTERVAL TO DEMONSTRATE OPERABILITY NOR WAS PLANT SHUTDOWN INITIATED.
(8012 INFRACTION)

TECHNICAL SPECIFICATION 3.20.1, PERMITS OPERATION UP TO 72 HOURS WITH A SINGLE SAFETY-RELATED SNUBBER INOPERABLE; REQUIRING THE REACTOR BE IN COLD SHUTDOWN WITHIN 36 HOURS AFTER THESE CONDITIONS CANNOT BE MET. CONTRARY TO THE ABOVE, AFTER TWO SAFETY-RELATED SNUBBERS (NOS. 5 AND 9) WERE DETERMINED INOPERABLE AT 1400 ON MAY 12, 1980, THE LICENSEE NEITHER RESTORED AT LEAST ONE SNUBBER TO OPERABILITY NOR PLACED THE REACTOR IN COLD SHUTDOWN WITHIN 36 HOURS.
(8015 INFRACTION)

TECHNICAL SPECIFICATION 6.9.2 CONTAINS REQUIREMENTS FOR REPORTING SELECTED OCCURRENCES TO NRC. (A) PARAGRAPH 6.9.2.A(2) REQUIRES NOTIFICATION WITHIN 24 HOURS FOR OPERATION WITH ANY PARAMETER SUBJECT TO A LIMITING CONDITION FOR OPERATION (LCO) LESS CONSERVATIVE THAN THE LEAST CONSERVATIVE ASPECT OF THE LCO. CONTRARY TO THE ABOVE, NOTIFICATION WAS NOT MADE WITHIN 24 HOURS AFTER A LEAST CONSERVATIVE ASPECT OF T.S. 3.20.1, PERMITTING OPERATION ABOVE COLD SHUTDOWN WITH A SINGLE SAFETY-RELATED SNUBBER INOPERABLE, WAS EXCEEDED ON MAY 12, 1980 BY OPERATION ABOVE COLD SHUTDOWN WITH TWO INOPERABLE SAFETY-RELATED SNUBBERS; AND (B) PARAGRAPH 6.9.2.B(2) REQUIRES A WRITTEN REPORT WITHIN 30 DAYS FOR CONDITIONS LEADING TO OPERATION IN A DEGRADED MODE PERMITTED BY AN LCO. CONTRARY TO THE ABOVE, NO WRITTEN REPORT WAS SUBMITTED WITHIN 30 DAYS AFTER THE PLANT WAS HEATED ABOVE COLD SHUTDOWN ON MAY 10, 1980, WITH AN INOPERABLE SAFETY-RELATED SNUBBER; A DEGRADED MODE PERMITTED BY T.S. 3.20.1.C.
(8015 DEFICIENCY)

TECHNICAL SPECIFICATION PART 6.8.1(D) STATES, IN PART: "WRITTEN PROCEDURES SHALL BE...IMPLEMENTED...COVERING THE...EMERGENCY PLAN IMPLEMENTATION." CONTRARY TO THE ABOVE, ON AUGUST 28, 1980, THE INSPECTORS VERIFIED BY DIRECT OBSERVATION DURING A TOUR OF SAFETY RELATED AREAS THAT FIRE PLAN IMPLEMENTING PROCEDURES PARTS 8.2 AND 8.3 CONCERNING THE CONTROL OF COMBUSTIBLE MATERIAL WERE NOT BEING IMPLEMENTED WHEN ACCUMULATIONS OF COMBUSTIBLE MATERIAL AND IMPROPERLY STORED COMBUSTIBLE MATERIAL WERE OBSERVED IN SAFETY RELATED AREAS.

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- THE MAIN STEAM LINE HIGH RADIATION SCRAM OF 10/1/80 WAS ATTRIBUTED TO AIR INTRODUCED INTO THE FEEDWATER SYSTEM UPON PLACING A CONDENSATE DEMINERALIZER IN SERVICE. RECIRCULATION PUMPS FAILED TO RUN BACK TO MINIMUM SPEED DUE TO A WIRING ERROR IN THE FEEDWATER FLOW INDICATION CIRCUIT. 'D' SAFETY-RELIEF VALVE JAMMED OPEN AND THE CAUSE ATTRIBUTED TO FOREIGN MATERIAL IN THE MAIN VALVE BODY INTERNALS.
- ON 10/07/80 THE 'A' SAFETY-RELIEF VALVE (SRV) INADVERTENTLY OPENED DUE TO HIGH NITROGEN SUPPLY PRESSURE. A SIMILAR EVENT WAS EXPERIENCED ON 10/31/80. THE NITROGEN SUPPLY TO SRV'S AND OTHER PROCESS CONTROLS IN THE PRIMARY CONTAINMENT WAS ISOLATED PENDING INVESTIGATION OF THE NITROGEN SUPPLY PROBLEMS (PROPOSED I&E BULLETIN).
- ON 10/30/80 THE ONSITE REVIEW COMMITTEE REVIEWED DESIGN DEFICIENCY OF HAVING A SEISMIC ANCHOR FOR PART OF THE SALT SCREEN WATER SYSTEM OUTSIDE THE MISSILE BARRIER. MODIFICATIONS ARE IN PROGRESS TO INSTALL A SEISMIC ANCHOR INSIDE THE MISSILE BARRIER.

PLANT STATUS:

- AS OF 10/31/80 THE PLANT IS IN HOT SHUTDOWN AWAITING A TECH SPEC CHANGE PROVIDING TEMPORARY RELIEF FROM A SALT SCREEN WATER SYSTEM REQUIREMENT PERTAINING TO TORNADO MISSILE PROTECTION.
- MAIN STACK AND OFF GAS RELEASE RATES DURING FULL POWER OPERATION THIS MONTH WERE APPROXIMATELY 2200 AND 40,000 MICROCURIES/SEC. RESPECTIVELY.

- LAST IE SITE INSPECTION DATE: 10/1-31/80

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50.55A SECTION G(4) REQUIRES COMPONENTS WHICH ARE CLASSIFIED AS ASME CODE CLASS 1, CLASS 2 AND CLASS 3 TO MEET THE INSERVICE INSPECTION REQUIREMENTS SET FORTH IN SECTION XI OF EDITIONS OF THE ASME BOILER AND PRESSURE VESSEL CODE AND ADDENDA. THE 1974 EDITION OF SECTION XI, SUBSECTION IWV, ARTICLE IWV-3000, PARAGRAPH IWV-3410C(3) REQUIRES IN PART THAT, "IF AN INCREASE IN STROKE TIME OF 25% OR MORE FROM THE PREVIOUS TEST FOR VALVES WITH STROKE TIMES GREATER THAN 10 SECONDS OR 50% OR MORE FOR VALVES WITH STROKE TIMES LESS THAN OR EQUAL TO 10 SECONDS IS OBSERVED, TEST FREQUENCY SHALL BE INCREASED TO ONCE EACH MONTH UNTIL CORRECTIVE ACTION IS TAKEN..." CONTRARY TO THE ABOVE, A PARITAL REVIEW OF DATA FROM IT-20, AND IT-45 FOR THE PERIOD 4-77 TO PRESENT, REVEALED THAT VALVES 539, 508, 850B, 538, AND 897A SHOWED INCREASES IN CYCLE TIMES AS LISTED BELOW AND WERE NOT SUBJECTED TO SHORTENED TEST INTERVALS. VALVE NUMBER 539, TEST INTERVAL 10/19/79-01/18/80, STROKE TIME PERCENTAGE INCREASE 97, STROKE DIRECTION OPEN; VALVE NUMBER 508, TEST INTERVAL 07/21/79-10/19/79, STROKE TIME PERCENTAGE INCREASE 94, STROKE DIRECTION OPEN, TEST INTERVAL 10/19/79-01/18/80, STROKE TIME PERCENTAGE INCREASE 151, STROKE DIRECTION CLOSED, TEST INTERVAL 04/18/80-07/19/80, STROKE TIME PERCENTAGE INCREASE 135, STROKE DIRECTION OPEN; VALVE NUMBER 538, TEST INTERVAL 10/24/77-01/23/78, STROKE TIME PERCENTAGE INCREASE 53, STROKE DIRECTION OPEN; VALVE NUMBER 897A, TEST INTERVAL 01/05/80-04/07/80, STROKE TIME PERCENTAGE INCREASE 67, STROKE DIRECTION CLOSED; VALVE NUMBER 850B, TEST INTERVAL 01/19/80-05/11/80, STROKE TIME PERCENTAGE INCREASE 58, STROKE DIRECTION OPEN.
(8014 INFRACTION)

TECHNICAL SPECIFICATION 15.3.3.B.2.C REQUIRES FOR THE CONTAINMENT SPRAY SYSTEM THAT, "ANY VALVE REQUIRED FOR THE FUNCTIONING OF THE SYSTEM DURING ACCIDENT CONDITIONS MAY BE INOPERABLE PROVIDED REPAIRS ARE COMPLETED WITHIN 24 HOURS. PRIOR TO INITIATING REPAIRS, ALL VALVES IN THE SYSTEM THAT PROVIDE THE DUPLICATE FUNCTION SHALL BE TESTED TO DEMONSTRATE OPERABILITY." CONTRARY TO THE ABOVE, ON AUGUST 27, 1980 AFTER COMPLETING PACKING ADJUSTMENT ON THE ISOLATION VALVE FROM THE RHR SYSTEM TO A UNIT 1 CONTAINMENT SPRAY PUMP (817A), BUT PRIOR TO PERFORMING POST MAINTENANCE TESTING ON THE VALVE, PACKING ADJUSTMENT WAS INITIATED ON THE DUPLICATE VALVE (871B) TO THE OTHER SPRAY PUMP.

STEP 5.16 OF STATION PROCEDURE B.4, PLANT SHUTDOWN AND COOLDOWN STATES THAT ONE IS TO "INITIATE REACTOR PROTECTION SYSTEM SHUTDOWN BYPASS AND RESET THE HIGH FLUX TRIP TO 5% AS PER OP A.69, SECTION 5.2." CONTRARY TO THE REQUIREMENTS, ON AUGUST 20, 1980, STEP 5.16 OF STATION PROCEDURE B.4 WAS NOT IMPLEMENTED WHICH RESULTED IN THE HIGH FLUX TRIP NOT BEING RESET.
(8026 DEFICIENCY)

10 CFR 50, APPENDIX A, CRITERION 23, STATES THAT THE PROTECTION SYSTEM SHALL BE DESIGNED TO FAIL INTO A SAFE STATE OR INTO A STATE DEMONSTRATED TO BE ACCEPTABLE ON SOME OTHER DEFINED BASIS IF CONDITIONS SUCH AS DISCONNECTION OF THE SYSTEM, LOSS OF ENERGY (E.G., ELECTRIC POWER, INSTRUMENT AIR), OR POSTULATED ADVERSE ENVIRONMENTS (E.G., EXTREME HEAT OR COLD, FIRE, PRESSURE, STEAM, WATER AND RADIATION) ARE EXPERIENCED. IN THE FASE APPENDIX 1A, PAGE 1A-26, AS PART OF A DISCUSSION ON CRITERION 23, THE LICENSEE STATES, "SAFETY FEATURES EQUIPMENT CAN BE MANUALLY INITIATED BY THE OPERATOR AT ANY TIME EVEN IF POWER IS LOST TO THE ACTUATION SYSTEM." CONTRARY TO THE REQUIREMENTS, THE REACTOR BUILDING PURGE INLET LINE VALVE, SFV 53503, THE REACTOR BUILDING PURGE OUTLET LINE VALVE SFV 53604, AND THE REACTOR BUILDING PRESSURE EQUALIZING LINE VALVE SFV 53210 WILL APPARENTLY FAIL OPEN ON LOSS OF DIRECT CURRENT POWER TO THE SOLENOID OPERATORS.

ENFORCEMENT STATUS

FAILURE TO ADOPT AND IMPLEMENT A REQUIREMENT OF AN ORDER MODIFYING LICENSE EFFECTIVE IMMEDIATELY ISSUED ON MARCH 28, 1980. THE ORDER REQUIRED CONTINUOUS VISUAL SURVEILLANCE OF ALL INTERFACE DOORS LEADING TO VITAL AREAS IN UNIT 1.
(8012 VIOLATION)

T.S. 6.8.1 REQUIRES WRITTEN PROCEDURES TO BE IMPLEMENTED COVERING THE ACTIVITIES OF REG. GUIDE 1.33 APP. A. AP-22 REQUIRES THAT CALIBRATION AND TEST EQUIPMENT BE CHECKED IN ACCORDANCE WITH THE VENDOR'S MANUAL REQUIREMENTS. THE VENDOR'S MANUAL REQUIRES SPECIFIC ENVIRONMENTAL CONDITIONS DURING CALIBRATION FOR JOHN FLUKE DVMS. CONTRARY TO THE ABOVE THE LICENSEE WAS UNABLE TO VERIFY THAT THESE CONDITIONS HAD BEEN MET DURING THE CALIBRATION OF JOHN FLUKE DVM PD-003, 004 AND 187. ALL WERE SUBSEQUENTLY USED TO CALIBRATE SAFETY RELATED EQUIPMENT.
(8019 DEFICIENCY)

10 CFR, APP. B, CRITERION V REQUIRES ACTIVITIES AFFECTING QUALITY TO BE PRESCRIBED BY PROCEDURES AND ACCOMPLISHED BY THEM. THE FOLLOWING IS A LIST OF THE LICENSEE'S FAILURE TO FOLLOW PROCEDURES: AP-19 REQUIRES THAT REJECTED RECEIVED ITEMS BE TAGGED AND STORED IN A HOLD AREA. CONTRARY TO THE REQUIREMENT LOT 26, BORIC ACID SHIPMENT P.O. 727471 WAS NOT HELD IN A QA HOLD AREA OR TAGGED PROPERLY. 10 CFR APP B, CRITERION XVII REQUIRES INSPECTOR IDENTIFICATION ON RECORDS. CONTRARY TO THIS NONE OF THE WAREHOUSE INSPECTION RECORDS IDENTIFIED THE INSPECTOR. SR-8 REQUIRES MONTHLY INSPECTIONS OF SAFETY RELATED STORAGE AREAS AND THE COMPLETED INSPECTION REPORTS BE SENT TO THE TDR FOR MICROFILMING. CONTRARY TO THIS THE APRIL 80 REPORT WAS MISSING AND NONE OF THE INSPECTION RECORDS WERE BEING MICROFILMED.
(8019 DEFICIENCY)

DURING THIS INSPECTION CONDUCTED ON OCTOBER 6-7 AND 9-10, 1980 THE FOLLOWING APPARENT ITEM OF NONCOMPLIANCE WAS IDENTIFIED. THIS ITEM IS A DEFICIENCY. THE SALEM UNIT 1 TECHNICAL SPECIFICATION 6.8.1 STATES, IN PART, THAT "WRITTEN PROCEDURES SHALL BE ESTABLISHED...COVERING THE ACTIVITIES REFERENCED BELOW: A. THE APPLICABLE PROCEDURES RECOMMENDED IN APPENDIX "A" OF REGULATORY GUIDE 1.33, NOVEMBER 1972..." REGULATORY GUIDE 1.33, NOVEMBER 1972, APPENDIX "A", SECTION I.1 STATES, IN PART, THAT "MAINTENANCE WHICH CAN AFFECT THE PERFORMANCE OF SAFETY-RELATED EQUIPMENT SHOULD BE...PERFORMED IN ACCORDANCE WITH WRITTEN PROCEDURES,..." MAINTENANCE PROCEDURE M11F, PARAGRAPH 3.1, STATES, IN PART, THAT "...WHEN THE REACTOR VESSEL IS OPEN, THE CONTROL AREA IS THE REACTOR VESSEL PIT..." THIS PROCEDURE FURTHER STATES, IN PART, THAT "CONTROL OF TOOLS AND ITEMS IN AN AREA IS BY SECURING ESSENTIAL PERSONAL ITEMS...BY TAPING TO THE BODY..." CONTRARY TO THE ABOVE, ON OCTOBER 10, 1980, MEMBERS OF A WORK CREW, INCLUDING A SUPERVISOR WORKING FROM A POSITION OVER THE REACTOR VESSEL PIT, DID NOT HAVE ESSENTIAL PERSONAL ITEMS TAPED TO THEIR BODY OR OTHERWISE FIRMLY SECURED.

OTHER ITEMS OF INTEREST

- SYSTEM AND COMPONENT PROBLEMS:
- NONDESTRUCTIVE TESTING (NDT) REVEALED THAT #13 LOW PRESSURE TURBINE HAD A CRACK IN THE THIRD STAGE ROTOR. THE ROTOR WAS REMOVED AND A COLLAR INSTALLED TO MAINTAIN SPACING BETWEEN THE ADJACENT ROTORS. A NEW ROTOR WILL BE INSTALLED AT THE NEXT REFUELING OUTAGE.
- DURING REFUELING, MINOR GRID STRAP DAMAGE WAS OBSERVED ON ONE ASSEMBLY WHICH HAD NOT PREVIOUSLY BEEN IDENTIFIED. THIS ASSEMBLY HAD BEEN SELECTED FOR MONITORING BECAUSE THE ADJACENT ASSEMBLY HAD GRID STRAP DAMAGE OBSERVED DURING THE LAST REFUELING. AN EVALUATION IS IN PROGRESS.
- FACILITY ITEMS (PLANS AND PROCEDURES):
- ANTICIPATED COMPLETION OF REFUELING OUTAGE MID-DECEMBER 1980.

TECHNICAL SPECIFICATION 6.8.1 REQUIRES THAT WRITTEN PROCEDURES AND ADMINISTRATIVE POLICIES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED THAT MEET OR EXCEED THE REQUIREMENTS AND RECOMMENDATIONS OF APPENDIX A OF USNRC REGULATORY GUIDE 1.33, REV. 1. PARAGRAPH 10 OF THIS APPENDIX STATES THAT PROCEDURES SHOULD BE WRITTEN TO PRESCRIBE THE INSTRUCTIONS FOR MAINTAINING WATER QUALITY WITHIN PRESCRIBED LIMITS, AND THE LIMITS ON CONCENTRATIONS OF AGENTS THAT MAY CAUSE CORROSIVE AFFECT. STATION ORDER S-E-2, "OPERATION, MAINTENANCE AND CHEMICAL CONTROL OF HEAT EXCHANGER EQUIPMENT," PROVIDES THAT "CORROSION OF THE PRIMARY SYSTEM COMPONENTS WILL BE CONTROLLED BY MAINTAINING THE CHLORIDE LEVELS WITHIN THE DEFINED LIMITS." PARAGRAPH 8.1.B DEFINES THE CHLORIDE LIMIT AS "LESS THAN 0.15 PPM. CONTRARY TO THE REQUIREMENTS, ON EACH DAILY SAMPLE RECORDED FROM SEPTEMBER 2 TO SEPTEMBER 13, 1980, THE CHLORIDE CONCENTRATION WAS IN EXCESS OF THE SPECIFIED LIMIT BY AN AMOUNT WHICH VARIED FROM 0.03 TO 0.35 PPM, OR 20-233% IN EXCESS OF THE LIMIT.

TECHNICAL SPECIFICATION 6.8.1 REQUIRES THAT WRITTEN PROCEDURES AND ADMINISTRATIVE POLICIES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED THAT MEET OR EXCEED THE REQUIREMENTS AND RECOMMENDATIONS OF APPENDIX A OF USNRC REGULATORY GUIDE 1.33, REV. 1. PARAGRAPH 7A(3), "LIQUID RADIOACTIVE WASTE SYSTEM: DISCHARGING THE EFFLUENTS," IS A RECOMMENDED PROCEDURE OF THIS APPENDIX. THE LICENSEE'S OPERATING INSTRUCTION S-3-2.26, "RECEIVING, STORAGE, PROCESSING AND DISCHARGE OF LIQUID WASTE," IMPLEMENTS THE APPENDIX A RECOMMENDATION. PRECAUTION III A OF THIS INSTRUCTION STATES THAT "DURING HOLDUP TANK RELEASES, THE SET POINT FOR ORMS 1218 SHALL BE SET AT A MAXIMUM OF 20,000 CPM ABOVE BACKGROUND." CONTRARY TO THE REQUIREMENTS, ON SEPTEMBER 24, 1980, WHILE THE WEST HOLDUP TANK WAS BEING DISCHARGED TO THE CIRCULATING WATER SYSTEM, THE INSPECTOR OBSERVED THAT THE SET POINT FOR URMS 1218 WAS SET AT 110,000 CPM, 95,000 CPM ABOVE THE BACKGROUND COUNT RATE OF APPROXIMATELY 15,000 CPM.

(8036 INFRACTION)

AS REQUIRED BY APPENDIX A TECHNICAL SPECIFICATIONS, SECTION 6.8.1, WRITTEN PROCEDURES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED COVERING THE APPLICABLE PROCEDURES IN APPENDIX A OF REGULATORY GUIDE 1.33, REVISION 2, FEBRUARY 1978. APPENDIX A OF REGULATORY GUIDE 1.33 REQUIRES THAT INSTRUCTION FOR STARTUP, SHUTDOWN, AND CHANGING MODES OF OPERATION BE PREPARED FOR THE EMERGENCY POWER SOURCES SYSTEMS. CONTRARY TO THE ABOVE, ON AUGUST 9, 1980, FAILURE TO FOLLOW THE SYSTEM OPERATING INSTRUCTIONS FOR RESETTING THE EMERGENCY DIESEL GENERATORS FOLLOWING AN AUTOMATIC START, RESULTED IN ALL FOUR EMERGENCY DIESEL GENERATORS BEING MADE INOPERABLE FOR APPROXIMATELY 24 MINUTES.
(8036 INFRACTION)

AS REQUIRED BY 10 CFR 73.55(D)(4), "...DESIGNATED LICENSEE VEHICLES SHALL BE LIMITED IN THEIR USE TO ONSITE PLANT FUNCTIONS...THE LICENSEE SHALL EXERCISE POSITIVE CONTROL OVER ALL DESIGNATED VEHICLES TO ASSURE THAT THEY ARE USED ONLY BY AUTHORIZED PERSONS AND FOR AUTHORIZED PURPOSES." IN ADDITION, SEQUOYAH NUCLEAR PLANT PHYSICAL SECURITY INSTRUCTION PHYSI-5, SECTION 5.2 STATES THAT "...ALL VEHICLES WITHIN THE PROTECTED AREA SHALL BE SECURED WHEN NOT IN USE. VEHICLES THAT CANNOT BE LOCKED BY KEY SHALL BE SECURED BY THE USE OF A LOCKING DEVICE...". CONTRARY TO THE ABOVE, ON AUGUST 6, 1980, THE INSPECTOR FOUND TWO DESIGNATED VEHICLES, NUMBERS 22 AND 33, UNLOCKED AND UNATTENDED IN THE PROTECTED AREAS.

THE REVISED TS MINIMUM LEVELS OF 96% AND 97% FOR THE RWST AND CAT WERE DENOTED IN THE SHIFT ORDER BOOK, BUT THE MINIMUM RWST AND CAT LEVELS LISTED IN PT 36 WERE 94% AND 77%, RESPECTIVELY, AND LED TO OPERATION OF THE RWST AT 95% AND THE CAT AT 96% ON AUGUST 14 AND 15, 1980.
(8037 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.4.D, DETAILED WRITTEN PROCEDURES WITH APPROPRIATE CHECK-OFF LISTS AND INSTRUCTIONS PROVIDED FOR OPERATION, MAINTENANCE, CALIBRATION OR TESTING OF INSTRUMENTS, COMPONENTS, AND SYSTEMS INVOLVING NUCLEAR SAFETY SHALL BE FOLLOWED. VEPCO NPS QA MANUAL, SECTION 14, ASSIGNS RESPONSIBILITY FOR THE TAGGING OF ALL EQUIPMENT TO ASSURE THAT IT IS PERFORMED IN ACCORDANCE WITH PROCEDURES AND IN A SAFE MANNER. CONTRARYTO THE ABOVE, APPROPRIATE TAGGING WAS NOT PERFORMED AND PROCEDURE PT 2.9 AND 2.9A WERE NOT FOLLOWED AS REQUIRED WHEN ELECTRICAL FUSES WERE REMOVED AND THE TRANSMITTERS ISOLATED ON THE SIX UNIT 2 MAIN STEAMLINE FLOW INSTRUMENTS FI 2472, 2475, 2484, 2485, 2494 PRIOR TO UNIT 2 STARTUP. THE STEAM FLOW INSTRUMENTS WERE FOUND ISOLATED AND INOPERABLE AT 12:30 A.M. ON AUGUST 19, 1980, WHILE OPERATING WAS AT 12% POWER.

ENFORCEMENT STATUS

CONTRARY TO ORDER OF 2/11/80 (ATT 1- PROPOSED TS 6.8.1.8.G) PROCEDURES ASSOCIATED WITH THE REACTOR BUILDING PURGE WERE NOT PROPERLY IMPLEMENTED.
(8011 INFRACTION)

CONTRARY TO ORDER OF 2/11/80 (ATT 1 - PROP. TS 6.8.1.A) ON JUNE 29, 1980, THE LICENSEE WORKED ON THE MODIFIED HYDROGEN CONTROL SYSTEM EXHAUST FAN WHILE IT WAS EXHAUSTING THE REACTOR BUILDING ATMOSPHERE AND NO "WORK REQUEST" FORM WAS COMPLETED. DURING THE EVOLUTION THE INDIVIDUAL CAUSED THE FAN TO TRIP (AUTOMATIC SHUTDOWN).
(8011 INFRACTION)

CONTRARY TO ORDER OF 2/11/80 (ATT 1 - PROP. TS 6.8.2) AS OF JULY 4, 1980, A RECOVERY MODE PROCEDURE CHANGE (REVISION 1 TO OP 2104-4.82) REACTOR BUILDING ATMOSPHERE CLEANUP USING THE MODIFIED HYDROGEN CONTROL SYSTEM AND THE "B" TRAIN OF THE MODIFIED REACTOR BUILDING PURGE SYSTEM) WAS IMPLEMENTED FOR APPROXIMATELY 12 HOURS WITHOUT BEING SUBMITTED TO THE NRC PRIOR TO IMPLEMENTATION. THEREFORE, THIS REVISION WAS NOT SUBJECT TO APPROVAL BY THE NRC PRIOR TO IMPLEMENTATION.
(8011 DEFICIENCY)

CONTRARY TO THE TS 6.8.1.F AND HP 1682 PARAGRAPH 5.1.1 SEVERAL ITEMS WHICH HAD FIXED OR REMOVABLE CONTAMINATION IN EXCESS OF THE LIMITS OF HEALTH PHYSICS PROCEDURE 1682 WERE GIVEN UNCONDITIONAL RELEASE TO CLEAN AREAS FROM A UNIT 2 CONTROL POINT. MAXIMUM REMOVABLE CONTAMINATION EXCEEDED 10,000 DPM/100 CM2 AND MAXIMUM RADIATION LEVEL WAS 10 MRAD/HR ON ONE PIECE OF PIPE.
(8011 INFRACTION)

CONTRARY TO 10 CFR 19.11A(4) AS OF JUNE 30, 1980, NONE OF THE ORDERS ISSUED PURSUANT TO SUBPART B OF PART 2 SINCE JULY 20, 1979, WERE POSTED. IN ADDITION, THE NOTICES OF VIOLATION ISSUED BY THE OFFICE OF INSPECTION AND ENFORCEMENT (REGION I) DATED MAY 28, 1980, AND ONE BY THE OFFICE OF INSPECTION AND ENFORCEMENT DATED OCTOBER 25, 1979, WERE NOT POSTED IN A SUFFICIENT NUMBER OF PLACES. THAT IS, ONE (DATED MAY 28, 1980) WAS POSTED ONLY ON A BULLETIN BOARD IN UNIT 2 CONTROL ROOM AND THE OTHER (DATED OCTOBER 25, 1979) WAS NOT POSTED. THESE NOTICES OF VIOLATION INVOLVE CERTAIN UNCORRECTED RADIOLOGICAL WORKING CONDITIONS AND THIS BULLETIN BOARD IS NOT A NORMAL ACCESS TO RADIOLOGICAL AREAS SUCH AS THE AUXILIARY BUILDING.
(8011 DEFICIENCY)

LICENSE STATUS

By Order for Modification of License dated July 20, 1979, the licensee's authority to operate the facility was suspended and the licensee's authority was limited to maintenance of the facility in the present shutdown cooling mode (44 F.R. 45271).

IT WAS ALLEGED THAT THE REHIRED EMPLOYEE MADE AN UNAUTHORIZED ENTRY ONTO THREE MILE ISLAND ON JULY 13, 1979 AT 11:10 P.M., ENTERED THE PUMPHOUSE, AND TRIPPED A NUCLEAR RIVER PUMP. THE INVESTIGATION DID NOT SUBSTANTIATE THE ALLEGED ACTIONS ASCRIBED TO THE FORMER EMPLOYEE. HOWEVER, THE UNEXPLAINED TRIP OF THE NUCLEAR RIVER PUMP (NRP-1A) ON JULY 13, 1979 AT 11:10 P.M. WAS VERIFIED. IN ADDITION, THREE INDIVIDUALS STATED THAT THE FORMER EMPLOYEE ADMITTED TO THEM, HIS ACTIONS WHICH WERE SIMILAR TO THE EVENT ALLEGED. THE FORMER EMPLOYEE STATED HE HAD FABRICATED THE STORY AS ALLEGED, BUT DENIED THAT HE HAD COMMITTED THE ACT.

+ 50-320/80-11 - JUN 1 - JUL 5: ROUTINE, ONSITE AND BACKSHIFT INSPECTION BY RESIDENT AND REGION-BASED INSPECTORS (218 HRS) OF SELECTED NEW AND REVISED PROCEDURES SUBMITTED FOR APPROVAL; PROCEDURE IMPLEMENTATION; POSTING OF NOTICES TO WORKERS; SHIFT MANNING/FIRE BRIGADE COMPOSITION; OFFSHIFT OPERATIONS ACTIVITIES: LICENSEE MEASURED REACTOR BUILDING CONCENTRATION UTILIZING NRC MOBILE LABORATORY; TRAINING PROGRAM FOR REACTOR BUILDING PURGE EVOLUTIONS; PWST CONSTRUCTION ACTIVITIES; SOLID WASTE STAGING CONSTRUCTION ACTIVITIES; SURVEILLANCE PROCEDURES INCLUDING ASSOCIATED DATA; AND RADIOACTIVE MATERIAL CONTROL. FIVE NONCOMPLIANCES WERE IDENTIFIED: FAILURE TO PROPERLY IMPLEMENT THE REACTOR BUILDING PURGE PROCEDURES; FAILURE TO UTILIZE THE WORK REQUEST SYSTEM TO CONDUCT SAFETY RELATED MAINTENANCE; FAILURE TO ASSURE CONTAMINATED MATERIAL IS NOT RELEASED TO UNCONTAMINATED AREAS; FAILURE TO SUBMIT A PROCEDURE REVISION TO THE NRC FOR APPROVAL; FAILURE TO PROPERLY POST NOTICES TO WORKERS.

(b) Some of these dates have been adjusted by staff assumptions.
(c) This is the total for both units.
(d) Plant not in commercial operation.
(e) Some spent fuel stored at Brunswick.
(f) Authorized a total 2088 BWR and 304 PWR assemblies for both pools.
(g) Robinson 2 assemblies being shipped to Brunswick for storage.
(h) Capacity is in metric tons of uranium; 1 MTU = 2 PWR assemblies or 5 BWR assemblies.
(i) No longer accepting spent fuel.
(j) Racked for 700 MTU.
(k) Reserved
(l) This is the station total.

REACTOR-YEARS OF EXPERIENCE

10/31/80

The total of Reactor years of experience is as the sum of all calendar days for each unit, from the date that electricity was first generated until a final shutdown date or the status date, whichever comes first, divided by 365.25 days/year.

If a date is unknown, the first day of the first month of operation is substituted. Units which have not yet generated electricity but which are licensed are listed but not included in the computation.

OPERATING UNITS STATUS REPORT

DATA AS OF 11/30/80

LICENSED OPERATING REACTORS

AUTHORIZATION AND CLEARANCE

THE U.S. NUCLEAR REGULATORY COMMISSION'S OFFICE OF MANAGEMENT AND PROGRAM ANALYSIS PUBLISHES THIS MONTHLY STATUS REPORT "AS PART OF THE REPORTING REQUIREMENTS IN SECTION 50.36 OF 10 CFR PART 50 UNDER GAO CLEARANCE NUMBER B-180225, WITH AN EXPIRATION DATE OF SEPTEMBER 30, 1981," AS STATED IN THE OCTOBER 3, 1978 LETTER FROM JOHN M. LOVELADY, ASSISTANT DIRECTOR, GENERAL GOVERNMENT DIVISION, U. S. GENFRAL ACCOUNTING OFFICE, TO J.M. FELTON, DIRECTOR, DIVISION OF RULES AND RECORDS, U.S. NUCLEAR REGULATORY COMMISSION.

STATEMENT OF PURPOSE

The U. S. Nuclear Regulatory Commission's monthly OPERATING UNITS STATUS REPORT — LICENSED OPERATING REACTORS, provides data on the operation of nuclear units as timely and accurately as possible. This information is collected by the Office of Management and Program Analysis from the Headquarters Staff of NRC's Office of Inspection and Enforcement, from NRC's Regional Offices, and from utilities. Since all of the data concerning operation of the units is provided by the utility operators less than two weeks after the end of the month, necessary corrections to published information are shown on the ERRATA page.

This report is divided into three sections: the first contains monthly highlights and statistics for commercial operating units, and errata from previously reported data; the second is a compilation of detailed information on each unit, provided by NRC Regional Offices, IE Headquarters and the Utilities; and the third section is an appendix for miscellaneous information such as spent fuel storage capability, reactor-years of experience and non-power reactors in the United States.

The percentage computations, Items 19 through 24 in Section 2, the vendor capacity factors on page 1-4, and actual vs. potential energy production on Page 1-2 are computed from actual power production from the period of consideration. The percentages listed in power generation on Page 1-2 are computed as an arithmetical average. The factors for the life-span of each unit (the "Cumulative" column) are reported by the utility and are not entirely re-computed by NRC. Utility power production data is checked for consistency with previously submitted statistics.

In some cases, the numbers in the "Cumulative" column may have been totaled from a date that is different from the date of commercial operation. In these cases, the column is noted with an explanation of the nature of the change on each individual plant page in Section 2.

It is hoped this status report proves informative and helpful to all agencies and individuals interested in analyzing trends in the nuclear industry which might have safety implications, or in maintaining an awareness of the U. S. energy situation as a whole.

GLOSSARY

AVERAGE DAILY POWER LEVEL (MWe)	The net electrical energy generated during the day (measured from 0001 to 2400 hours inclusive) in megawatts hours divided by 24 hours.
LICENSED THERMAL POWER (MWt)	The maximum thermal power of the reactor authorized by the NRC, expressed in megawatts.
DATE OF COMMERCIAL OPERATION	Date unit was declared by utility owner to be available for the regular production of electricity; usually related to satisfactory completion of qualification tests as specified in the purchase contract and to accounting policies and practices of utility.
DESIGN ELECTRICAL RATING (DER) (Net MWe)	The nominal net electrical output of the unit specified by the utility and used for the purpose of plant design.
FORCED OUTAGE	An outage required to be initiated no later than the weekend following discovery of an off-normal condition.
FORCED OUTAGE HOURS	The clock hours during the report period that a unit is unavailable due to forced outages.
GROSS ELECTRICAL ENERGY GENERATED (MWH)	Electrical output of the unit during the report period as measured at the output terminals of the turbine generator, in megawatts hours.
GROSS HOURS	The clock hours from the beginning of a specified situation until its end. For outage durations, the clock hours during which the unit is not in power production.
GROSS THERMAL ENERGY GENERATED (MWH)	The thermal energy produced by the unit during the report period as measured or computed by the licensee in megawatt hours.
HOURS GENERATOR ON-LINE	Also, "Unit Service Hours." The total clock hours in the report period during which the unit operated with breakers closed to the station bus. These hours added to the total outage hours experienced by the unit during the report period, shall equal the hours in the report period.
HOURS IN REPORTING PERIOD	For units in power ascension at the end of the period, the gross hours from the beginning of the period or the first electrical production, whichever comes last, to the end of the period. For units in commercial operation at the end of the period, the gross hours from the beginning of the period or of commercial operation, whichever comes last, to the end of the period or decommissioning, whichever comes first.
HOURS REACTOR CRITICAL	The total clock hours in the report period during which the reactor sustained a controlled chain reaction.
MAXIMUM DEPENDABLE CAPACITY (GROSS) (MDC Gross) (Gross MWe)	Dependable main-unit gross capacity, winter or summer, whichever is smaller. The dependable capacity varies because the unit efficiency varies during the year due to cooling water temperature variations. It is the gross electrical output as measured at the output terminals of the turbine generator during the most restrictive seasonal conditions (usually summer).
MAXIMUM DEPENDABLE CAPACITY (NET) (MDC Net) (Net MWe)	Maximum Dependable Capacity (Gross) less the normal station service loads.
NAMEPLATE RATING (Gross MWe)	The nameplate power designation of the generator in megavolt amperes (MVA) times the nameplate power factor of the generator. NOTE: The nameplate rating of the generator may not be indicative of the maximum or dependable capacity, since some other item of equipment of a lesser rating (e.g., turbine) may limit unit output.
NET ELECTRICAL ENERGY GENERATED	Gross electrical output of the unit measured at the output terminals of the turbine generator during the reporting period, minus the normal station service electrical energy utilization. If this quantity is less than zero, a negative number should be recorded.
OUTAGE	A situation in which no electrical production takes place.
OUTAGE DATE	As reported on Appendix D of Reg. Guide 1.16, the date of the start of the outage. If continued from a previous month, report the same outage date but change "Method of Shutting Down Reactor" to "4 (Other)" and add a note: "Continued from previous month."
OUTAGE DURATION	The total clock hours of the outage measured from the beginning of the report period or the outage, whichever comes last, to the end of the report period or the outage, whichever comes first.
OUTAGE NUMBER	A number unique to the outage assigned by the licensee. The same number is reported each month in which the outage is in progress. One format is "76-05" for the fifth outage to occur in 1976.
PERIOD HOURS	See "Hours in Reporting Period."
POWER REDUCTION	A reduction in the Average Daily Power Level of more than 20% from the previous day. All power reductions are defined as outage of zero hours durations for the purpose of computing unit service and availability factors, and forced outage rate.

REACTOR AVAILABLE HOURS	The total clock hours in the report period during which the reactor was critical or was capable of being made critical. (Reactor Reserve Shutdown Hours + Hours Reactor Critical.)
REACTOR AVAILABILITY FACTOR	$\frac{\text{Reactor Available Hours} \times 100}{\text{Period Hours}}$
REACTOR RESERVE SHUTDOWN	The cessation of criticality in the reactor for administrative or other similar reasons when operation could have been continued.
REACTOR RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the reactor is in reserve shutdown mode. NOTE: No credit is given for NRC imposed shutdowns.
REACTOR SERVICE FACTOR	$\frac{\text{Hours Reactor Critical} \times 100}{\text{Period Hours}}$
REPORT PERIOD	Usually, the preceding calendar month. Can also be the preceding calendar year, (Year-to-Date), or the life-span of a unit (cumulative).
RESTRICTED POWER LEVEL	Maximum net electrical generation to which the unit is restricted during the report period due to the state of equipment, external conditions, administrative reasons, or a direction by NRC.
SCHEDULED OUTAGE	Planned removal of a unit from service for refueling, inspection, training, or maintenance. Those outages which do not fit the definition of "Forced Outage" perforce are "Scheduled Outages."
STARTUP AND POWER ASCENSION TEST PHASE	Period following initial criticality during which the unit is tested at successively higher levels, culminating with operation at full power for a sustained period and completion of warranty runs. Following this phase, the utility generally considers the unit to be available for commercial operation.
UNIT	The set of equipment uniquely associated with the reactor, including turbine generators, and ancillary equipment, considered as a single electrical energy production facility.
UNIT AVAILABLE HOURS	The total clock hours in the report period during which the unit operated on-line or was capable of such operation. (Unit Reserve Shutdown Hours + Hours Generator On-Line.)
UNIT AVAILABILITY FACTOR*	$\frac{\text{Unit Available Hours} \times 100}{\text{Period Hours}}$
UNIT CAPACITY FACTORS	
– Using Licensed Thermal Power	$\frac{\text{Gross Thermal Energy Generated} \times 100}{\text{Period Hours} \times \text{Lic. Thermal Power}}$
– Using Nameplate Rating	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{Nameplate Rating}}$
– Using DER	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{DER}}$
– Using MDC Gross	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Gross}}$
– Using MDC Net	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Net}}$

NOTE: if MDC Gross and/or MDC Net have not been determined, the DER is substituted for this quantity for Unit Capacity Factor calculations.

UNIT FORCED OUTAGE RATE	$\frac{\text{Forced Outage Hours}}{\text{Unit Service Hours} + \text{Forced Outage Hours}}$
UNIT RESERVE SHUTDOWN	The removal of the unit from on-line operation for economic or other similar reasons when operation could have been continued.
UNIT RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the unit was in reserve shutdown mode.
UNIT SERVICE FACTOR	$\frac{\text{Unit Service Hours} \times 100}{\text{Period Hours}}$
UNIT SERVICE HOURS	See "Hours Generator On-Line."

Capacity factor in this page, denoted as CFMDC, is a function of the net maximum dependable capacity. See the corresponding definition in the Glossary. The vendor averages are computed by the formula :

$$\frac{\text{Net Electrical Energy Produced by Vendor}}{\text{Potential Electrical Production By Vendor In This Month.}} \times 100\%$$

AVERAGE DAILY POWER LEVEL FOR ALL COMMERCIALLY OPERATING UNITS

This chart depicts the average daily power level for the units in commercial operation during the month.

The straight line on the graph labelled "SUM OF MAX. DEPEND. CAP." is plotted at the value shown by summing the separate maximum dependable capacities of the commercially operating units (in Net MWe). The plot shown below the line is calculated by summing the separate average daily power levels of the commercially operating units for each day of the month.

The scale on the left vertical axis runs in 1,000 MWe increments from 0 to 55,000 MWe (Net). The right vertical axis shows the percentage in 10% increments, up to 100% of the "SUM OF MAX. DEPEND. CAP."

It should be recognized that the 100% line would be obtainable only if all of the commercially operating units operated at 100% capacity, 24 hours per day, for the entire month. In other words, since any power generator must occasionally shut down to refuel and/or perform needed maintenance, and also since 100% capacity production is not always required by power demands, the 100% line is a theoretical goal and not a practical one.

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 3.11.E.2. AN INSPECTION AND AUDIT BY AN OUTSIDE QUALIFIED FIRE CONSULTANT WILL BE PERFORMED AT INTERVALS NO GREATER THAN 3 YEARS. CONTRARY TO THE ABOVE, ON SEPTEMBER 1, 1980, GREATER THAN THREE YEARS HAD ELASPED SINCE THE LAST FIRE INSPECTION AND AUDIT BY AN OUTSIDE AGENCY.
(8035 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.3.A.2. DETAILED WRITTEN PROCEDURES, INCLUDING APPLICABLE CHECK-OFF LISTS ARE REQUIRED FOR REFUELING OPERATION. GENERAL OPERATING INSTRUCTION (GOI) 100.3. REFUELING OPERATIONS, REQUIRES VERIFICATION OF PROPER FUEL ASSEMBLY ORIENTATION AFTER LOADING OF EACH FUEL ASSEMBLY PLUS A VERIFICATION OF EACH FUEL ASSEMBLY AFTER THE CORE HAS BEEN FULLY LOADED. IN ADDITION TECHNICAL INSTRUCTION-14 (TI-14), SPECIAL NUCLEAR MATERIALS CONTROL AND ACCOUNTABILITY SYSTEM, REQUIRES A FULL CORE VERIFICATION FOR PROPER FUEL ASSEMBLY ORIENTATION BY A MINIMUM OF TWO PARTIES. CONTRARY TO THE ABOVE, PERSONNEL FAILED TO VERIFY PROPER ORIENTATION OF TWO FUEL ASSEMBLIES ON UNIT 2 AS EVIDENCED ON SEPTEMBER 14, 1980, WHEN IT WAS DETERMINED THAT ON THE LAST REFUELING OUTAGE, IN MAY, 1979, TWO FUEL ASSEMBLIES WERE MISORIENTATED BY 90 DEGREES AND NOT DETECTED TILL AFTER THE NEXT REFUELING OUTAGE. IN ADDITION, ON SEPTEMBER 19, 1980 WITH UNIT 1 AT POWER, IT WAS DETERMINED BY A REVIEW OF THE CORE LOAD TAPES THAT ONE FUEL ASSEMBLY IS MISORIENTATED BY 90 DEGREES IN UNIT 1.
(8035 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.3.D.1, EACH HIGH RADIATION AREA IN WHICH INTENSITY OF RADIATION IS GREATER THAN 100 MREM/HR, ENTRANCE SHALL BE CONTROLLED BY ISSUANCE OF A SPECIAL WORK PERMIT. CONTRARY TO THE ABOVE, ON SEPTEMBER 21 AND 22, 1980, SIX TVA PERSONNEL ENTERED A HIGH RADIATION AREA MEASURING 300 MREM/HR, WITHOUT THE CONTROL OF A SPECIAL WORK PERMIT FOR ENTRANCE TO A HIGH RADIATION AREA.

INSPECTION SUMMARY

INSPECTION SEPTEMBER 1-30 (80-35): THIS ROUTINE INSPECTION INVOLVED 30 RESIDENT INSPECTOR-HOURS ON SITE IN THE AREAS OF OPERATIONAL SAFETY, IE CIRCULAR FOLLOWUP, REPORTABLE OCCURRENCES, PLANT PHYSICAL PROTECTION, FIRE PROTECTION, REFUELING OUTAGE, REACTOR TRIP, IE BULLETIN FOLLOWUP, AND HEALTH PHYSICS. OF THE NINE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE FOUND IN SIX AREAS; THREE SEPARATE ITEMS OF NONCOMPLIANCE WERE FOUND IN THREE AREAS; (INFRACTION - FAILURE TO FOLLOW PROCEDURE FOR FUEL ASSEMBLY ORIENTATION VERIFICATION; INFRACTION - FAILURE TO HAVE AN OUTSIDE AGENCY PERFORM A FIRE INSPECTION WITHIN THREE YEARS; INFRACTION - FAILURE OF PERSONNEL TO HAVE A SPECIAL WORK PERMIT FOR ENTRY INTO A HIGH RADIATION AREA.

INSPECTION OCTOBER 6-7 (80-37): INCLUDED REVIEW OF LICENSEE IDENTIFIED ITEM OF NONCOMPLIANCE AND LICENSEE PROCEDURE FOR UNESCORTED ACCESS CLEARANCES. THE INSPECTOR ALSO REVIEWED THE LICENSEES INVESTIGATION OF A RECENT INTRUSION OF THE PROTECTED AREA AT BROWNS FERRY. THE INSPECTION INVOLVED THREE INSPECTOR-HOURS ON SITE BY ONE NRC INSPECTOR. THE INSPECTION WAS BEGUN DURING A REGULAR PERIOD. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE AREAS EXAMINED DURING THE INSPECTION.

INSPECTION OCTOBER 14-15, (80-38): THIS SPECIAL, UNANNOUNCED INSPECTION INVOLVED THREE INSPECTOR-HOURS ON SITE IN THE AREA OF A LICENSEE IDENTIFIED ITEM CONCERNING SETTLING OF STRUCTURAL BACKFILL UNDER THE RHR SERVICE WATER TUNNELS. OF THE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATION WERE IDENTIFIED.

10 CFR 50, APPENDIX B, CRITERION II REQUIRES ACTIVITIES AFFECTING QUALITY BE ACCOMPLISHED UNDER SUITABLY CONTROLLED CONDITIONS, INCLUDING ADEQUATE CLEANNESS. THE LICENSEE'S QUALITY ASSURANCE PROGRAM, SECTION 2.2 REQUIRES THAT THE LICENSEE ADHERE TO ALL MANDATORY REQUIREMENTS OF ANSI N18.7. ANSI N18.7-1976, SECTION 5.2.10 REQUIRES QUALITY HOUSEKEEPING PRACTICES ENCOMPASSING ALL ACTIVITIES RELATED TO CONTROL OF FIRE PREVENTION AND PROTECTION, INCLUDING DISPOSAL OF COMBUSTIBLE MATERIAL AND DEBRIS. CONTRARY TO THE ABOVE, DURING ROUTINE PLANT TOURS ON SEPTEMBER 19, 26, AND OCTOBER 3, 1980, THE INSPECTORS IDENTIFIED SEVERAL AREAS OF ACCUMULATED COMBUSTIBLE MATERIAL AND DEBRIS WHICH WERE NOT BEING CONTROLLED AND WHICH REPRESENTED A POTENTIAL FIRE HAZARD. EXAMPLES INCLUDED: SEPTEMBER 19, 1980, UNIT 1 TURBINE BUILDING TRACK WAY AND TURBINE FLOOR - PRESENCE OF PAPER, WOOD, PLASTIC AND SLINGS ON THE FLOOR AND UNIT 2 REACTOR BUILDING, R.W.C.U. DEMINERALIZER RECIRCULATION PUMP ROOM - PRESENCE OF MOP HEADS, RAGS, PAPER ON THE FLOOR AND GENERALLY DIRTY; ON SEPTEMBER 26, 1980, UNIT 3 REACTOR BUILDING, GROUND FLOOR WEST - PRESENCE OF EXCESSIVE SWP SHOE COVERS, WIPES, SCRAPS OF PAPER, PLASTIC AND GENERALLY DIRTY; AND ON OCTOBER 3, 1980, UNIT 2 LPCI ROOMS - PRESENCE OF USED SWP CLOTHING, PLASTIC BAGS, WIPES, AND A BAG OF TRASH AND UNIT 2 TORUS BASEMENT - PRESENCE OF HOSES, WIRES, CABLES, WOOD, PAPER, PLASTIC, DEBRIS AND RUBBLE IN LARGE QUANTITIES SHOWING EVIDENCE OF HAVING BEEN THERE FOR A LONG TIME. THIS IS A REPETITIVE ITEM OF NONCOMPLIANCE SINCE A SIMILAR PROBLEM WAS IDENTIFIED ONCE PREVIOUSLY IN NRC INSPECTION REPORT NO. 50-10/80-09; 50-237/80-08; 50-249/80-12, DATED MAY 23, 1980.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50.54(K) STATES, "AN OPERATOR OR SENIOR OPERATOR LICENSED PURSUANT TO PART 55 OF THIS CHAPTER SHALL BE PRESENT AT THE CONTROLS AT ALL TIMES DURING THE OPERATION OF THE FACILITY." THE DRESDEN STATION TECHNICAL SPECIFICATIONS, CHAPTER 6.1 AND TABLE 6.1.1 REQUIRE, FOR THE OPERATIONAL STATUS OF UNITS 2 AND 3 ON AUGUST 8, 1980, THREE LICENSED OPERATORS TO FULFILL THE MINIMUM SHIFT STAFFING REQUIREMENTS. CONTRARY TO THE ABOVE, AT APPROXIMATELY 6:00 A.M. ON AUGUST 8, 1980, THE NRC SENIOR RESIDENT INSPECTOR OBSERVED THAT TWO OF THE THREE LICENSED OPERATORS IN THE CONTROL ROOM ASSIGNED TO MONITOR THE OPERATION OF UNITS 2 AND 3, SPECIFICALLY THE UNIT 3 AND CONTROL ROOM CENTER DESK OPERATORS, APPEARED TO BE ASLEEP, SUCH THAT THEY WERE NOT FULLY ATTENTIVE NOR WERE THEY ABLE TO MONITOR REACTOR CONDITIONS; THUS, LICENSED OPERATORS WERE NOT AT THE CONTROLS AS REQUIRED.
(8016 DEFICIENCY)

THE LICENSEE DID NOT CONDUCT PROPER BACKGROUND SCREENING OF CONTRACTOR PERSONNEL.
(8019 DEFICIENCY)

10 CFR 50, APPENDIX B, CRITERION II REQUIRES ACTIVITIES AFFECTING QUALITY BE ACCOMPLISHED UNDER SUITABLY CONTROLLED CONDITIONS, INCLUDING ADEQUATE CLEANNESS. THE LICENSEE'S QUALITY ASSURANCE PROGRAM, SECTION 2.2 REQUIRES THAT THE LICENSEE ADHERE TO ALL MANDATORY REQUIREMENTS OF ANSI N18.7. ANSI N18.7-1976, SECTION 5.2.10 REQUIRES QUALITY HOUSEKEEPING PRACTICES ENCOMPASSING ALL ACTIVITIES RELATED TO CONTROL OF FIRE PREVENTION AND PROTECTION, INCLUDING DISPOSAL OF COMBUSTIBLE MATERIAL AND DEBRIS. CONTRARY TO THE ABOVE, DURING ROUTINE PLANT TOURS ON SEPTEMBER 19, 26, AND OCTOBER 3, 1980, THE INSPECTORS IDENTIFIED SEVERAL AREAS OF ACCUMULATED COMBUSTIBLE MATERIAL AND DEBRIS WHICH WERE NOT BEING CONTROLLED AND WHICH REPRESENTED A POTENTIAL FIRE HAZARD. EXAMPLES INCLUDED: SEPTEMBER 19, 1980, UNIT 1 TURBINE BUILDING TRACK WAY AND TURBINE FLOOR - PRESENCE OF PAPER, WOOD, PLASTIC AND SLINGS ON THE FLOOR AND UNIT 2 REACTOR BUILDING, R.W.C.U. DEMINERALIZER RECIRCULATION PUMP ROOM - PRESENCE OF MOP HEADS, RAGS, PAPER ON THE FLOOR AND GENERALLY DIRTY; ON SEPTEMBER 26, 1980, UNIT 3 REACTOR BUILDING, GROUND FLOOR WEST - PRESENCE OF EXCESSIVE SWP SHOE COVERS, WIPES, SCRAPS OF PAPER, PLASTIC AND GENERALLY DIRTY; AND ON OCTOBER 3, 1980, UNIT 2 LPCI ROOMS - PRESENCE OF USED SWP CLOTHING, PLASTIC BAGS, WIPES, AND A BAG OF TRASH AND UNIT 2 TORUS BASEMENT - PRESENCE OF HOSES, WIRES, CABLES, WOOD, PAPER, PLASTIC, DEBRIS AND RUBBLE IN LARGE QUANTITIES SHOWING EVIDENCE OF HAVING BEEN THERE FOR A LONG TIME. THIS IS A REPETITIVE ITEM OF NONCOMPLIANCE SINCE A SIMILAR PROBLEM WAS IDENTIFIED ONCE PREVIOUSLY IN NRC INSPECTION REPORT NO. 50-10/80-09; 50-237/80-08; 50-249/80-12, DATED MAY 23, 1980.

INSPECTION SUMMARY

+ INVESTIGATION ON SEPTEMBER 8-10, (80-16): BECAUSE TWO REACTOR OPERATORS WERE CONSIDERED BY THE NRC SENIOR RESIDENT INSPECTOR TO BE ASLEEP WHILE ON DUTY IN THE REACTOR CONTROL ROOM, REVIEWED RECORDS, INTERVIEWED PERSONNEL AND OBTAINED SWORN STATEMENTS. THE INVESTIGATION INVOLVED 20 INVESTIGATION-HOURS ONSITE BY ONE NRC INVESTIGATOR. THE INVESTIGATION DETERMINED THAT AN NRC INSPECTOR OBSERVED TWO OPERATORS APPARENTLY ASLEEP, BUT BOTH OPERATORS, WHILE STATING THEY MAY HAVE CLOSED THEIR EYES OR "NODDED OFF", STATED THEY WERE NOT ASLEEP. BOTH OPERATORS CLAIMED TO BE READING AT THE TIME. ONE ITEM OF NONCOMPLIANCE WAS IDENTIFIED IN THAT CONTRARY TO 10 CFR 50.54(K), TWO LICENSED OPERATORS APPEARED TO BE ASLEEP SUCH THAT THEY WERE NOT FULLY ATTENTIVE NOR ABLE TO MONITOR REACTOR CONDITIONS.

+ INSPECTION ON SEPTEMBER 7 THROUGH OCTOBER 3, (80-21): ROUTINE, UNANNOUNCED RESIDENT INSPECTION OF FOLLOWUP ON PREVIOUS NONCOMPLIANCE; MONTHLY SURVEILLANCE OBSERVATION; MONTHLY MAINTENANCE OBSERVATION; INSPECTION DURING LONG-TERM SHUT DOWN; IE BULLETIN 80-06 FOLLOWUP; AND, FOLLOWUP ON HEADQUARTERS REQUEST. LICENSE STATUS

On December 31, 1980, Pacific Gas and Electric Company (PG&E) filed a motion to withdraw its application for license amendment to permit the restart of the Humboldt Bay Power Plant, Unit No. 3. The licensee cited the high potential costs of additional equipment and operating costs when measured against the size of the facility and its remaining useful life. PG&E also noted that further definition of the NRC backfit requirement policy may have a substantial impact on these costs and that when NRC retrofit standards become better known, currently projected costs may be less than expected and it may then be economic to make the required modifications.

The utility plans to evaluate the evolving NRC backfit requirements as well as other alternatives including decommissioning.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50, APPENDIX B, CRITERION XVI, STATES IN PART THAT MEASURES SHALL BE ESTABLISHED TO ASSURE THAT CONDITIONS ADVERSE TO QUALITY, SUCH AS FAILURES, MALFUNCTIONS, DEFICIENCIES, DEVIATIONS, DEFECTIVE MATERIAL AND EQUIPMENT, AND NONCONFORMANCES ARE PROMPTLY IDENTIFIED AND CORRECTED. IN THE CASE OF SIGNIFICANT CONDITIONS ADVERSE TO QUALITY, THE MEASURES SHALL ASSURE THAT THE CAUSE OF THE CONDITION IS DETERMINED AND CORRECTIVE ACTION TAKEN TO PRECLUDE REPETITION. OPERATIONAL QUALITY ASSURANCE PROGRAM (OQAP), SECTION 11, "NONCOMPLIANCE AND CORRECTIVE ACTION", REQUIRES THAT PLANT NONCONFORMANCES BE ANALYZED TO DETERMINE IF CONDITIONS ADVERSE TO QUALITY ARE SIGNIFICANT IN NATURE AND THAT MEASURES SHALL BE PROVIDED TO ENSURE THAT CORRECTIVE ACTION IS TAKEN TO PRECLUDE RECURRENCE OF SIGNIFICANT CONDITIONS. SECTION 3.1.8 OF THIS OQAP STATES THAT CONDITIONS OF A RECURRING NATURE SHALL BE CONSIDERED AS SIGNIFICANT CONDITIONS. CONTRARY TO THE ABOVE, THE INSPECTOR FOUND A NUMBER OF CASES WHERE NO ACTION WAS TAKEN TO ANALYZE PLANT NONCONFORMANCES FOR TRENDS AND/OR REPETITION WHEN VENDORS REPETITIVELY SUPPLIED NONCONFORMING MATERIAL TO THE FACILITY. IN ADDITION, NO CORRECTIVE ACTION HAS BEEN TAKEN TO RESOLVE REPETITIVE DEFICIENCIES IDENTIFIED BY WPS QA CONCERNING THE FACT THAT THE KEWAUNEE PLANT DOES NOT HAVE AN IMPLEMENTED PROGRAM TO ESTABLISH SHELF-LIFE CONTROLS.
(8023 INFRACTION)

10 CFR 50, APPENDIX B, CRITERION XVII, STATES IN PART THAT CONSISTENT WITH APPLICABLE REGULATORY REQUIREMENTS, THE APPLICANT SHALL ESTABLISH REQUIREMENTS CONCERNING RECORD RETENTION, SUCH AS DURATION, LOCATION, AND ASSIGNED RESPONSIBILITY. OPERATIONAL QUALITY ASSURANCE PROGRAM DESCRIPTION DATED JANUARY 20, 1978, SECTION 2.3 STATES THAT THE OPERATIONAL QUALITY ASSURANCE PROGRAM (OQAP) MANUAL TRANSLATES THE REQUIREMENTS OF REGULATORY GUIDE 1.88 REVISION 2 INTO A REFERENCE MANUAL FOR THE OQAP. REGULATORY GUIDE 1.88 STATES THAT THE REQUIREMENTS AND RECOMMENDATIONS INCLUDED IN ANSI N45.2.9-1974 ARE ACCEPTABLE TO THE NRC. ANSI N45.2.9-1974 SECTIONS 5.3 AND 6.2 REQUIRES THAT PRIOR TO STORAGE OF RECORDS IN A QUALITY ASSURANCE RECORD FILE, A WRITTEN STORAGE PROCEDURE SHALL BE PREPARED AND A CUSTODIAN SHALL BE DESIGNATED WITH THE RESPONSIBILITY TO ENFORCE THE PROCEDURE AND THAT A LIST SHALL BE GENERATED DESIGNATING THOSE PERSONNEL WHO SHALL HAVE ACCESS TO THE FILES. CONTRARY TO THE ABOVE, THE KEWAUNEE PLANT HAS NOT DESIGNATED A RECORD CUSTODIAN NOR HAS A PERSONNEL ACCESS LIST BEEN GENERATED.
(8023 INFRACTION)

10 CFR 50, APPENDIX B, CRITERION VII, STATES IN PART THAT MEASURES SHALL BE ESTABLISHED TO ASSURE THAT PURCHASED MATERIAL, EQUIPMENT, AND SERVICES, WHETHER PURCHASED DIRECTLY OR THROUGH CONTRACTORS AND SUBCONTRACTORS, CONFORM TO THE PROCUREMENT DOCUMENTS. THESE MEASURES SHALL INCLUDE PROVISIONS, AS APPROPRIATE, FOR SOURCE EVALUATION AND SELECTION, OBJECTIVE EVIDENCE OF QUALITY FURNISHED BY THE CONTRACTOR OR SUBCONTRACTOR, INSPECTION AT THE CONTRACTOR OR SUBCONTRACTOR SOURCE, AND EXAMINATION OF PRODUCTS UPON DELIVERY. DOCUMENTARY EVIDENCE THAT MATERIAL AND EQUIPMENT CONFORM TO THE PROCUREMENT REQUIREMENTS SHALL BE AVAILABLE AT THE NUCLEAR POWER PLANT SITE PRIOR TO INSTALLATION OR USE OF SUCH MATERIAL AND EQUIPMENT. CONTRARY TO THE ABOVE, THE INSPECTOR FOUND THAT WISCONSIN PUBLIC SERVICE CORPORATION HAS NOT ESTABLISHED ADEQUATE MEASURES TO CONTROL PURCHASED MATERIAL AS FOLLOWS: (A) ITEMS WERE RELEASED FOR INSTALLATION AND ARE BEING USED IN QA-1 SYSTEMS PRIOR TO RECEIPT OF DOCUMENTARY EVIDENCE THAT THEY CONFORM TO THE PROCUREMENT DOCUMENTS. IN ADDITION, ITEMS RECEIVED WITH DOCUMENTATION ARE BEING RELEASED FOR USE PRIOR TO A TECHNICAL REVIEW OF THE DOCUMENTS TO ASSURE CONFORMANCE TO PROCUREMENT REQUIREMENTS. AN EXAMPLE OF AN ITEM RELEASED AND USED PRIOR TO RECEIPT OF DOCUMENTATION REQUIRED BY THE PURCHASE ORDER WAS A STARTER FOR THE PLANT DIESEL GENERATOR. ADDITIONAL ITEMS WERE ALSO NOTED: (B) NONCONFORMING ITEMS (NCR'S) WERE NOT REVIEWED AND SIGNED OFF BY THE PLANT PERFORMANCE ENGINEER PRIOR TO RELEASE OF THESE ITEMS AS REQUIRED BY ADMINISTRATIVE DIRECTIVE 3.8.
(8023 INFRACTION)

10 CFR 50, APPENDIX B, CRITERION X, STATES IN PART THAT INSPECTION OF ACTIVITIES AFFECTING QUALITY SHALL BE PERFORMED BY INDIVIDUALS OTHER THAN THOSE WHO PERFORMED THE ACTIVITY BEING INSPECTED. OPERATIONAL QUALITY ASSURANCE PROGRAM DESCRIPTION DATED JANUARY 20, 1973, STATES IN THE INTRODUCTION SECTION THAT THE PROGRAM COMPLIES WITH THE PROVISIONS OF ANSI N18.7-1976, "ADMINISTRATIVE CONTROLS AND QUALITY ASSURANCE FOR THE OPERATIONAL PHASE OF NUCLEAR POWER PLANTS." ANSI N18.7-1976, SECTION 5.2.6 REQUIRES THAT ELECTRICAL JUMPERS AND LIFTED ELECTRICAL LEADS SHALL BE CONTROLLED BY APPROVED PROCEDURES WHICH SHALL INCLUDE A REQUIREMENT FOR INDEPENDENT VERIFICATION. CONTRARY TO THE ABOVE, ACD 8.4 TEMPORARY CHANGES AND CORRECTIVE/REPAIR MAINTENANCE PROCEDURE SP003 DO NOT INCLUDE A REQUIREMENT FOR INDEPENDENT VERIFICATION OF THE INSTALLATION AND REMOVAL OF ELECTRICAL JUMPERS.
(8023 INFRACTION)

TECHNICAL SPECIFICATIONS SECTION 6.8.1 STATES IN PART THAT WRITTEN PROCEDURES SHALL BE IMPLEMENTED THAT MEET THE REQUIREMENTS AND RECOMMENDATIONS OF SECTION 5.1 AND 5.3 OF ANSI N18.7-1972. ANSI N18.7-1972 SECTION 5.3 STATES THAT NUCLEAR POWER PLANTS SHALL BE OPERATED IN ACCORDANCE WITH WRITTEN PROCEDURES. CONTRARY TO THE ABOVE, THE FOLLOWING WRITTEN PROCEDURES WERE NOT IMPLEMENTED: (A) OPERATIONAL QUALITY ASSURANCE PROGRAM, SECTION 10, "CALIBRATION CONTROL," SECTION 3.5.1 REQUIRES THAT MEASUREMENT AND TEST EQUIPMENT SHALL BE SUITABLY MARKED TO INDICATE CALIBRATION DATE, BY WHOM THE DEVICE WAS CALIBRATED, AND THE NEXT SCHEDULED CALIBRATION DATE. TWO DEADWEIGHT TESTERS (CONTROL NUMBERS 91150 AND 91151) WERE RETURNED FROM VENDOR CALIBRATION AND PLACED INTO SERVICE AS REFERENCE STANDARDS WITHOUT PLACING THE APPROPRIATE CALIBRATION STICKERS ON THE INSTRUMENTS. DEADWEIGHT TESTER NO. 91150, BEARING A CALIBRATION STICKER ON BOTH THE INSTRUMENT AND THE WEIGHT BOX SHOWING A CALIBRATION DUE DATE OF JANUARY, 1980, WAS SUBSEQUENTLY USED TO CALIBRATE VARIOUS PIECES OF SHOP AND FIELD TEST AND CALIBRATION EQUIPMENT ON MARCH 14, 17, 18, MAY 1 AND AUGUST 7, 1980; (B) ADMINISTRATIVE CONTROL DIRECTIVE 8.6, "SURVEILLANCE PROCEDURES," SECTION 5.5.2.1.C STATES, IN PART, THAT A SURVEILLANCE PROCEDURE EXCEPTION REPORT SHALL BE INITIATED BY THE PERSON RESPONSIBLE FOR PERFORMING THE SURVEILLANCE TEST...IF A PROBLEM OR OUT OF ACCEPTABLE TOLERANCE CONDITION IS ENCOUNTERED DURING THE SURVEILLANCE TEST. SURVEILLANCE TEST, SP-10-111, "INSPECTION OF DIESEL GENERATOR, REQUIRES THAT BEFORE STARTING THE DIESEL THAT THE ENGINE COOLANT TEMPERATURE BE CHECKED AND THAT THE NORMAL CONDITION BE GREATER THAN 100 DEGREES F. THE TEST RAN ON THE 1A DIESEL ON MAY 21, 1980, INDICATED THE TEMPERATURE WAS 90 DEGREES F. NO SURVEILLANCE PROCEDURE EXCEPTION REPORT WAS INITIATED. OTHER SIMILAR EXAMPLES WERE NOTED TO HAVE OCCURRED; (C) PROCEDURE ICP 33.1 USED TO CALIBRATE SAFETY INJECTION PUMP SUCTION GAUGES PI-926 (11281A) AND PI-927 (11280A) ON DECEMBER 13, 1976, INDICATES THAT THE GAUGES WERE FOUND TO BE OUT OF TOLERANCE. THE GAUGES WERE ADJUSTED AND RETESTED. THE RETEST RESULTS WERE ALSO OUT OF TOLERANCE. THE COMPLETED DATA SHEETS WERE REVIEWED AND ACCEPTED AND NO ACTION WAS TAKEN TO CORRECT THE DISCREPANCY NOR WAS A EXCEPTION REPORT INITIATED.
(8023 INFRACTION)

10 CFR 50, APPENDIX B, CRITERION II, STATES IN PART THAT THE PROGRAM SHALL PROVIDE FOR INDOCTRINATION AND TRAINING OF PERSONNEL PERFORMING ACTIVITIES AFFECTING QUALITY AS NECESSARY TO ASSURE THAT SUITABLE PROFICIENCY IS ACHIEVED AND MAINTAINED. OPERATIONAL QUALITY ASSURANCE PROGRAM, SECTION 13, STATES THAT THE TRAINING PROGRAM SHALL PROVIDE SUITABLE TRAINING OF OTHER STATION PERSONNEL, WHO DO NOT HAVE TO OBTAIN AN NRC OPERATING LICENSE, SUCH AS SUPERVISORS, PROFESSIONALS OPERATORS, TECHNICIANS AND MAINTENANCE PERSONNEL; AND THAT THE TRAINING SHALL BE PROVIDED TO ACHIEVE SPECIAL SKILLS REQUIRED IN THE PERFORMANCE OF PLANT OPERATION, INCLUDINGJOB-RELATED PROCEDURES AND INSTRUCTIONS. CONTRARY TO THE ABOVE, A TRAINING PROGRAM FOR TECHNICIANS AND MAINTENANCE PERSONNEL HAD NOT BEEN ESTABLISHED AS REQUIRED. IN ADDITION, ON-THE-JOB TRAINING RECORDS ARE NOT BEING MAINTAINED CURRENT.
(8023 INFRACTION)

10 CFR 50.59, REQUIRES IN PART THAT A PROPOSED CHANGE TO A FACILITY BE REVIEWED TO DETERMINE THAT IT DOES NOT INVOLVE A UNREVIEWED SAFETY QUESTION; 10 CFR 50, APPENDIX B, CRITERION III REQUIRES IN PART THAT DESIGN CHANGES, INCLUDING FIELD CHANGES BE SUBJECT TO DESIGN CONTROL MEASURES COMMENSURATE WITH THOSE APPLIED TO THE ORIGINAL DESIGN. TECHNICAL SPECIFICATION 6.8.1 REQUIRES THAT THE LICENSEE IMPLEMENT ADMINISTRATIVE POLICIES AND PROCEDURES. CONTRARY TO THE ABOVE, CHANGES WERE MADE TO THE CONTROL ROOM AIR CONDITIONER SERVICE WATER STRAINER DRAIN, A QA TYPE I AND SEISMIC CLASS 1 SYSTEM, ON OCTOBER 30, 1979 WITHOUT REVIEWS OR CONTROLS AND WITHOUT IMPLEMENTING ADMINISTRATIVE CONTROL DIRECTIVES 8.5, 8.4, OR 8.9 WHICH ARE THE ADMINISTRATIVE PROCEDURES THE LICENSEE HAS APPROVED TO COMPLY WITH THE APPLICABLE REGULATORY REQUIREMENTS.
(8023 INFRACTION)

10 CFR 50, APPENDIX B, CRITERIA IV, STATES IN PART THAT MEASURES SHALL BE ESTABLISHED TO ASSURE THAT APPLICABLE REGULATORY REQUIREMENTS, DESIGN BASES, AND OTHER REQUIREMENTS WHICH ARE NECESSARY TO ASSURE ADEQUATE QUALITY ARE SUITABLY REFERENCED IN THE DOCUMENTS FOR PROCUREMENT OF MATERIAL, EQUIPMENT AND SERVICES, WHETHER PURCHASED BY THE APPLICANT OR BY ITS CONTRACTORS OR SUBCONTRACTORS. OPERATING QUALITY ASSURANCE PROGRAM SECTION 6, "PROCUREMENT CONTROL", STATES THAT THE DIRECTIVES SHALL PROVIDE FOR INCLUSION OR REFERENCING OF THE FOLLOWING INFORMATION AS APPROPRIATE: QUALITY ASSURANCE PROGRAM REQUIREMENTS; RIGHT OF ACCESS; AND 10 CFR 21 REQUIREMENTS. CONTRARY TO THE ABOVE, MEASURES HAVE NOT BEEN ADEQUATELY IMPLEMENTED FOR THE PLACEMENT OF PURCHASE ORDERS. TEN OUT OF TWENTY PURCHASE ORDER DOCUMENTS, SPECIFIED NEITHER QUALITY ASSURANCE PROGRAM REQUIREMENTS REFERENCES TO 10 CFR 50, APPENDIX B, NOR 10 CFR 21 PROVISIONS. OF THE TWENTY PURCHASE ORDERS REVIEWED, ALL TWENTY FAILED TO REFERENCE A RIGHT OF ACCESS TO THE SUPPLIERS FACILITIES. THE PURCHASE ORDERS REVIEWED WERE FOR QA-1, SAFETY RELATED ITEMS.

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 3.7 PRESCRIBES THE CONDITIONS FOR OFF-SITE AND ON-SITE ELECTRICAL POWER SOURCES FOR OPERATION OF STATION AUXILIARIES DURING REACTOR OPERATION. CONTRARY TO THE ABOVE, ON JULY 10 AND 11, 1980, UNIT 3 WAS OPERATED IN A MODE WITH ONLY CONTROL GRADE AUTOMATIC TRANSFER CAPABILITY BETWEEN NORMAL POWER SOURCE AND STARTUP POWER SOURCE. THE SAFETY GRADE AUTOMATIC TRANSFER CAPABILITY WAS OUT-OF-SERVICE. DURING THESE PERIODS MANUAL TRANSFER CAPABILITY WAS AVAILABLE AT ALL TIMES
(8025 INFRACTION)

CONTRARY TO TECHNICAL SPECIFICATION 6.1.2, CHANGE 12 TO INSTRUMENT PROCEDURE IP/0/A/3000/.2, ENCLOSUE 11.32, RECEIVED ONLY A SINGLE APPROVAL, BY A SENIOR REACTOR OPERATOR; AND WAS REVIEWED BY ONLY AN I & E TECHNICIAN WHO DID NOT RECOGNIZE THAT THE CHANGE WOULD PERMIT NONCOMPLIANCE WITH TECHNICAL SPECIFICATION 3.2.

SUMMARY

DURING THE BEGINNING OF THE MONTH, OYSTER CREEK WAS OPERATING AT 96.3% CAPACITY. LOAD WAS LIMITED BY CONDENSATE DEMINERALIZER DIFFERENTIAL PRESSURE. THE ULTIMATE CAUSE WAS INABILITY OF THE NEW RADWASTE SYSTEM TO PROCESS LIQUID AND SOLID WASTE AS DESIGNED. LOAD WAS REDUCED ON 11/4 FOR AN ABRO ON A CONDENSATE DEMINERALIZER AND ON 11/7 FOR MAINTENANCE ON "C" FEEDWATER STRING AND #4 TURBINE STOP VALVE. THE PLANT WAS SHUTDOWN ON 11/21. RESTART WAS DELAYED ONE DAY DUE TO CONTAINMENT INERTION PROBLEMS.

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 6.2.B REQUIRES ADHERENCE TO STATION RADIATION CONTROL PROCEDURES. THE FOLLOWING INSTANCES OF FAILURE TO MEET THIS REQUIREMENT WERE IDENTIFIED DURING THE APPRAISAL. (A) STATION PROCEDURES QRS700-2 AND QRS700-3, RESPECTIVELY, REQUIRE QUARTERLY CALIBRATION OF "CP" AND GEIGER-MUELLER (GM) EXPOSURE RATE INSTRUMENTS. CONTRARY TO THE ABOVE, ON MAY 12, 1980, VICTOREEN 740F (CP) S/N 109 AND EBERLINE PRM 4 (GM) S/N 2216 LOCATED IN EMERGENCY BOX NO. 1 WERE FOUND TO HAVE BEEN LAST CALIBRATED ON OCTOBER 26, 1979, APPROXIMATELY SIX MONTHS EARLIER. (B) STATION PROCEDURE QRP 100-1, SECTION 26, SPECIFIES A LIMIT OF 3000 COUNTS PER MINUTES ON LAUNDERED PROTECTIVE CLOTHING MADE AVAILABLE FOR REUSE. CONTRARY TO THE ABOVE, SEVERAL GARMENTS TAKEN FROM REISSUE BINS AND MONITORED WITH THE LAUNDRY MONITOR DURING THE APPRAISAL EXCEEDED THIS LIMIT.
(8020 INFRACTION)

UNIT 1 TECHNICAL SPECIFICATION 3.10.B.2 STATES, "THE SRM OR DUNKING TYPE DETECTOR SHALL HAVE A MINIMUM OF 3 CPS WITH ALL RODS FULLY INSERTED IN THE CORE EXCEPT WHEN BOTH OF THE FOLLOWING CONDITIONS ARE FULFILLED: (A) NO MORE THAN TWO FUEL ASSEMBLIES ARE PRESENT IN THE CORE QUADRANT ASSOCIATED WITH THE SRM; (B) WHILE IN CORE, THESE FUEL ASSEMBLIES ARE IN LOCATIONS ADJACENT TO THE SRM." CONTRARY TO THE ABOVE, ON SEPTEMBER 14, 1980, A FUEL ASSEMBLY WAS REMOVED FROM A CORE QUADRANT CONTAINING 3 FUEL ASSEMBLIES WITH A SRM INDICATING LESS THAN 3 CPS.
(8022 INFRACTION)

UNITS 1 AND 2 TECHNICAL SPECIFICATIONS 3.12.F.2 STATES, "WITH ONE OR MORE PENETRATION FIRE BARRIERS NOT INTACT, ESTABLISH A CONTINUOUS FIRE WATCH ON AT LEAST ONE SIDE OF THE AFFECTED PENETRATION WITHIN ONE HOUR IF THE AREA ON EITHER SIDE OF THE AFFECTED PENETRATION CONTAINS EQUIPMENT REQUIRED TO BE OPERABLE." CONTRARY TO THE ABOVE, ON SEPTEMBER 10, 1980, THE NRC INSPECTOR FOUND THAT A CONTINUOUS FIRE WATCH HAD NOT BEEN ESTABLISHED WITHIN ONE HOUR ON EITHER SIDE OF TWO (2) FOUR AND ONE-HALF INCH DIAMETER FIRE BARRIER PENETRATIONS NOT SEALED IN THE FLOOR BETWEEN THE CABLE SPREADING ROOM AND THE AUXILIARY ELECTRIC ROOM.
(8022 INFRACTION)

UNIT 1 TECHNICAL SPECIFICATION 6.2.A.2 STATES, IN PART, THAT "DETAILED WRITTEN PROCEDURES INCLUDING APPLICABLE CHECKOFF LISTS SHALL BE PREPARED, APPROVED AND ADHERED TO FOR REFUELING OPERATIONS." CONTRARY TO THE ABOVE, ON SEPTEMBER 19, 1980, TEMPORARY PROCEDURE 1377 WAS NOT ADHERED TO IN THAT CHARGING WATER ISOLATION VALVES WERE NOT CLOSED AS REQUIRED BY THE PROCEDURE.
(8022 INFRACTION)

UNIT 1 TECHNICAL SPECIFICATIONS, SECTION 6.2.A.6 STATES IN PART THAT DETAILED WRITTEN PROCEDURES AND APPLICABLE CHECKOFF LISTS SHALL BE PREPARED, APPROVED AND ADHERED TO FOR PREVENTIVE AND CORRECTIVE MAINTENANCE OPERATIONS WHICH COULD HAVE AN EFFECT ON THE SAFETY OF THE FACILITY. CONTRARY TO THE ABOVE, ON JUNE 21, 1980, IMPROPER ADJUSTMENTS WERE PERFORMED ON THE EXHAUST RESTRICTOR OF A MAIN STEAM ISOLATION VALVE WHICH RESULTED IN A FAILURE OF THE MSIV TO CLOSE DURING A SURVEILLANCE TEST ON JULY 3, 1980. THE LICENSEE'S CORRECTIVE AND PREVENTIVE ACTIONS HAVE BEEN REVIEWED AND APPEAR TO BE ADEQUATE; THEREFORE, NO FURTHER RESPONSE TO THIS ITEM IS REQUIRED.
(8019 DEFICIENCY)

UNIT 1 TECHNICAL SPECIFICATIONS, SECTION 6.2.A.1 REQUIRES THAT OPERATION OF THE REACTOR AND OTHER SYSTEMS AND COMPONENTS INVOLVING NUCLEAR SAFETY OF THE FACILITY BE PERFORMED IN ACCORDANCE WITH DETAILED WRITTEN PROCEDURES AND APPLICABLE CHECKOFF LISTS. CONTRARY TO THE ABOVE, ON AUGUST 17, 1980, WHILE PERFORMING SURVEILLANCE QIS-130-2 "RCIC PUMP OPERABILITY TEST" THE OPERATOR FAILED TO RETURN THE RCIC TO ITS NORMAL OPERATING CONFIGURATION AS STATED IN STEP 8.
(8019 INFRACTION)

UNIT 1 TECHNICAL SPECIFICATIONS, SECTION 6.2.A.1 REQUIRES THAT OPERATION OF THE REACTOR AND OTHER SYSTEMS AND COMPONENTS INVOLVING NUCLEAR SAFETY OF THE FACILITY BE PERFORMED IN ACCORDANCE WITH DETAILED WRITTEN PROCEDURES AND APPLICABLE CHECKOFF LISTS. CONTRARY TO THE ABOVE, DURING THE PERIOD OF AUGUST 17 TO AUGUST 18, 1980, THE RCIC FLOW CONTROLLER WAS NOT IN ITS NORMAL OPERATING CONFIGURATION AS STATED IN STEP C-5 OF THE PROCEDURE QOS-005-2 "NRMAL CONTROL ROOM INSPECTION AND SHIFT TURNOVER P ANEL CHECKS."
(8019 INFRACTION)

10 CFR 20.203(C)(2) LISTS THREE ALTERNATIVE REQUIREMENTS FOR CONTROL OF ACCESS TO HIGH RADIATION AREAS. CONTRARY TO THESE REQUIREMENTS: (A) AN UNPOSTED, UNBARRICADED, AND UNOBSERVED HIGH RADIATION AREA EXISTED NEAR THE SAMPLE HOOD ON THE 6[illegible] FOOT LEVEL OF THE UNIT 2 REACTOR BUILDING FOR SEVERAL DAYS (MAY 5-14) DURING THE APPRAISAL; AND (B) ON MAY 5, 1980, A LADDER TEMPORARILY LASHED IN PLACE GAVE READY ACCESS TO A POSTED HIGH RADIATION AREA ABOVE THE UNIT 2 CRD ACCUMULATORS.

SYSTEMS AND COMPONENTS

- WHILE TESTING ELECTROMATIC RELIEF VALVES, DURING UNIT 1 SHUTDOWN ON AUGUST 31, 1980, ONE VALVE STUCK OPEN. THE CAUSE WAS LATER DETERMINED TO BE A FAULTY SEAT ON THE PILOT VALVE. DURING U.T. TESTING OF THE "A" LOW PRESSURE SECTION OF THE UNIT 1 TURBINE AN INDICATION WAS DISCOVERED ON ONE OF THE HUBS. AFTER NRC CONSULTANTS WITNESSED THE TESTING THE DEFINITION OF THE INDICATION WAS INCONCLUSIVE. BASED ON THESE UNCERTANTIES THE LICENSEE WILL INSPECT THE "B" TURBINE SECTION TO ENSURE NO OTHER INDICATIONS EXIST. (80-22)

PLANT STATUS

THE UNIT WAS SHUT DOWN ON AUGUST 31, 1980 TO BEGIN A SCHEDULED 12 WEEK REFUELING OUTAGE.

*LAST IE SITE INSPECTION DATE: OCTOBER 31, 1980

- INSPECTION REPORT NO: 80-26

SUMMARY

INSPECTION SUMMARY

- INSPECTION ON SEPTEMBER 1 THROUGH OCTOBER 17, (80-22): ROUTINE, UNANNOUNCED RESIDENT INSPECTION OF LICENSEE ACTION ON PREVIOUS INSPECTION FINDINGS, MAINTENANCE OBSERVATION, SURVEILLANCE OBSERVATION, OPERATIONAL SAFETY VERIFICATION, RECEIPT OF NEW FUEL, PREPARATION FOR REFUELING, REFUELING ACTIVITIES, PARTICIPATION IN NRR/LICENSEE MEETING, REVIEW OF PERIODIC AND SPECIAL REPORTS, LICENSEE EVENT REPORT FOLLOWUP, IE BULLETINS, FOLLOWUP ON HEADQUARTERS REQUEST, LOCAL LEAK RATE TESTING, INDEPENDENT INSPECTION, PLANT SCRAMS, AND ALLEGATION FOLLOWUP. THE INSPECTION INVOLVED 282 INSPECTOR-HOURS ONSITE BY TWO NRC INSPECTORS INCLUDING 58 INSPECTOR-HOURS ONSITE DURING OFF-SHIFTS. OF THE 16 AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED IN 14 AREAS; THREE ITEMS OF NONCOMPLIANCE WERE IDENTIFIED IN TWO AREAS (FAILURE TO FOLLOW PROCEDURES; AND FAILURE TO FOLLOW PROCEDURES; AND INADEQUATE MANAGEMENT).
- MANAGEMENT MEETING ON OCTOBER 31, (80-26): MANAGEMENT MEETING HELD AT THE NRC'S REQUEST TO DISCUSS THE REGULATORY PERFORMANCE OF THE ACTIVITIES AT DRESDEN, QUAD-CITIES, AND ZION NUCLEAR GENERATING STATIONS AS CONCLUDED IN THE SYSTEMATIC ASSESSMENT OF LICENSEE PERFORMANCE (SALP) PROGRAM. THE MEETING INVOLVED 15 MAN-HOURS AT THE CORPORATE OFFICES BY 11 NRC PERSONNEL. A SUMMATION OF THE LICENSEE PERFORMANCE EVALUATION WAS PRESENTED. AREAS OF CONCERN WERE DISCUSSED WITH CORPORATE MANAGEMENT. THE PERFORMANCE AT DRESDEN, QUAD-CITIES AND ZION NUCLEAR GENERATING STATIONS WAS CONSIDERED TO BE ADEQUATE.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 20.203(C)(2) LISTS THREE ALTERNATIVE REQUIREMENTS FOR CONTROL OF ACCESS TO HIGH RADIATION AREAS. CONTRARY TO THESE REQUIREMENTS: (A) AN UNPOSTED, UNBARRICADED, AND UNOBSERVED HIGH RADIATION AREA EXISTED NEAR THE SAMPLE HOOD ON THE 647 FOOT LEVEL OF THE UNIT 2 REACTOR BUILDING FOR SEVERAL DAYS (MAY 5-14) DURING THE APPRAISAL; AND (B) ON MAY 5, 1980, A LADDER TEMPORARILY LASHED IN PLACE GAVE READY ACCESS TO A POSTED HIGH RADIATION AREA ABOVE THE UNIT 2 CRD ACCUMULATORS.
(8022 INFRACTION)

TECHNICAL SPECIFICATION 6.2.B REQUIRES ADHERENCE TO STATION RADIATION CONTROL PROCEDURES. THE FOLLOWING INSTANCES OF FAILURE TO MEET THIS REQUIREMENT WERE IDENTIFIED DURING THE APPRAISAL. (A) STATION PROCEDURES QRS700-2 AND QRS700-3, RESPECTIVELY, REQUIRE QUARTERLY CALIBRATION OF "CP" AND GEIGER-MUELLER (GM) EXPOSURE RATE INSTRUMENTS. CONTRARY TO THE ABOVE, ON MAY 12, 1980, VICTOREEN 740F (CP) S/N 109 AND EBERLINE PRM 4 (GM) S/N 2216 LOCATED IN EMERGENCY BOX NO. 1 WERE FOUND TO HAVE BEEN LAST CALIBRATED ON OCTOBER 26, 1979, APPROXIMATELY SIX MONTHS EARLIER. (B) STATION PROCEDURE QRP 100-1, SECTION 26, SPECIFIES A LIMIT OF 3000 COUNTS PER MINUTES ON LAUNDERED PROTECTIVE CLOTHING MADE AVAILABLE FOR REUSE. CONTRARY TO THE ABOVE, SEVERAL GARMENTS TAKEN FROM REISSUE BINS AND MONITORED WITH THE LAUNDRY MONITOR DURING THE APPRAISAL EXCEEDED THIS LIMIT.
(8022 INFRACTION)

UNITS 1 AND 2 TECHNICAL SPECIFICATIONS 3.12.F.2 STATES, "WITH ONE OR MORE PENETRATION FIRE BARRIERS NOT INTACT, ESTABLISH A CONTINUOUS FIRE WATCH ON AT LEAST ONE SIDE OF THE AFFECTED PENETRATION WITHIN ONE HOUR IF THE AREA ON EITHER SIDE OF THE AFFECTED PENETRATION CONTAINS EQUIPMENT REQUIRED TO BE OPERABLE." CONTRARY TO THE ABOVE, ON SEPTEMBER 10, 1980, THE NRC INSPECTOR FOUND THAT A CONTINUOUS FIRE WATCH HAD NOT BEEN ESTABLISHED WITHIN ONE HOUR ON EITHER SIDE OF TWO (2) FOUR AND ONE-HALF INCH DIAMETER FIRE BARRIER PENETRATIONS NOT SEALED IN THE FLOOR BETWEEN THE CABLE SPREADING ROOM AND THE AUXILIARY ELECTRIC ROOM.
(8024 INFRACTION)

SYSTEMS AND COMPONENTS

+ DURING UNIT 2 SHUTDOWN ON OCTOBER 17, 1980, WHILE TESTING ELECTROMATIC RELIEF VALVES ONE VALVE FAILED TO OPEN. INITIAL CAUSE IS BELIEVED TO BE EXCESSIVE LEAKAGE PAST A VALVE PLUG, WHICH PREVENTS THE DEVELOPMENT OF SUFFICIENT DIFFERENTIAL PRESSURE TO OPEN THE VALVE. UNIT 2 SHUTDOWN ON OCTOBER 17, 1980 FOR A THREE-DAY MAINTENANCE OUTAGE WHICH INCLUDED BATTERY DISCHARGE TESTING AND VARIOUS TMI MODIFICATIONS WHICH REQUIRE A DUAL UNIT OUTAGE FOR IMPLEMENTATION. INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50.59, "CHANGES, TESTS AND EXPERIMENTS," AUTHORIZES THE LICENSEE TO MAKE CHANGES IN THE FACILITY AND PROCEDURES DESCRIBED IN THE SAFETY ANALYSIS REPORT, AND TO CONDUCT TESTS OR EXPERIMENTS NOT DESCRIBED IN THE SAFETY ANALYSIS REPORT WITHOUT PRIOR COMMISSION APPROVAL, UNLESS THE PROPOSED CHANGE, TEST OR EXPERIMENT INVOLVES A CHANGE IN THE TECHNICAL SPECIFICATIONS INCORPORATED IN THE LICENSE OR AN UNREVIEWED SAFETY QUESTION. THE LICENSEE MUST MAINTAIN A RECORD OF SUCH A CHANGE, TEST OR EXPERIMENT THAT INCLUDES A WRITTEN SAFETY EVALUATION WHICH PROVIDES THE BASIS FOR THE DETERMINATION THAT THE CHANGE, TEST OR EXPERIMENT DOES NOT INVOLVE AN UNREVIEWED SAFETY QUESTION. FINAL SAFETY ANALYSIS REPORT, SECTION 5.1.3.3, STATES IN PART "IF THE RCS IS TO BE OPENED DURING THE SHUTDOWN, THE HYDROGEN AND FISSION GAS IN THE REACTOR COOLANT IS REDUCED BY DEGASSING THE COOLANT IN THE VOLUME CONTROL TANK." CONTRARY TO THE REQUIREMENTS, FROM APRIL 11 TO APRIL 14, 1980 THE REACTOR COOLANT SYSTEM (RCS) WAS DEGASSED BY VENTING THE PRESSURIZER VAPOR SPACE VIA A JUMPER TO THE COOLANT VOLUME CONTROL SYSTEM HOLDUP TANK, AND AN EVALUATION WAS NOT MADE OF THIS CHANGE, TEST OR EXPERIMENT TO DETERMINE THAT IT DID NOT INVOLVE AN UNREVIEWED SAFETY QUESTION.
(8016 INFRACTION)

10 CFR 19.12, "INSTRUCTIONS TO WORKERS," STATES IN PART THAT ALL INDIVIDUALS WORKING IN OR FREQUENTING ANY PORTION OF A RESTRICTED AREA SHALL BE INSTRUCTED IN THE APPROPRIATE RESPONSE TO WARNINGS MADE IN THE EVENT OF ANY UNUSUAL OCCURRENCE OR MALFUNCTION THAT MAY INVOLVE EXPOSURE TO RADIATION OR RADIOACTIVE MATERIAL. CONTRARY TO THE REQUIREMENTS, ON JULY 7, 1980 THREE INDIVIDUALS WERE GRANTED UNESCORTED ACCESS TO PORTIONS OF THE RESTRICTED AREA INCLUDING AREAS POSTED "CAUTION: EVACUATION ALARM OR PAGING SYSTEM CANNOT BE HEARD," AND WERE NOT INSTRUCTED IN THE ADMINISTRATIVE CONTROLS NECESSARY TO PERMIT AN APPROPRIATE RESPONSE TO WARNINGS MADE IN THE EVENT OF ANY UNUSUAL OCCURRENCE OR MALFUNCTION THAT MAY INVOLVE EXPOSURE TO RADIATION OR RADIOACTIVE MATERIAL.

REACTOR-YEARS OF EXPERIENCE

11/30/80

The total of Reactor years of experience is as the sum of all calendar days for each unit, from the date that electricity was first generated until a final shutdown date or the status date, whichever comes first, divided by 365.25 days/year.

If a date is unknown, the first day of the first month of operation is substituted. Units which have not yet generated electricity but which are licensed are listed but not included in the computation.

16. ABSTRACT *(200 words or less)*

The OPERATING UNITS STATUS REPORT - LICENSED OPERATING REACTORS provides data on the operation of nuclear units as timely and accurately as possible. This information is collected by the Office of Management and Program Analysis from the Headquarters staff of NRC's Office of Inspection and Enforcement, from NRC's Regional Offices, and from utilities. The three sections of the report are: monthly highlights and statistics for commercial operating units, and errata from previously reported data; a compilation of detailed information on each unit, provided by NRC's Regional Offices, IE Headquarters and the utilities; and an appendix for miscellaneous information such as spent fuel storage capability, reactor-years of experience and non-power reactors in the U.S. It is hoped the report is helpful to all agencies and individuals interested in maintaining an awareness of the U.S. energy situation as a whole.
